One of the essentials in connexion with any power plant is to be able to know exactly how much steam the boilers will produce under various conditions. Only with this knowledge as a base is it possible to ascertain whether or no the plant is being operated efficiently. Where steam is used, in addition to its use for power generation, for process work, and for heating water radiator systems, and other industrial applications, it is impossible to get out the proper costs of all or any of these utilities unless the exact amount of steam generated is known and the amount used for actual power generation duly measured. In calculations of the kind it is necessary to take into consideration the length of the pipe lines, the conditions they meet with in that length, the amount and nature of the lagging or non-conducting material, if any, with which they are covered. From this it naturally arises that some form of steam meter is necessary on both the power lines and the lines used for industrial purposes. In any case, the amount of steam generated at the boiler should be metered, as this enables the engineer to know exactly how much the boiler is producing for a given expenditure of fuel. Meters at the other centres of use would enable the amounts used to be subtracted from the amount shown as generated on the boiler meter, and in that way transmission and radiation losses could be ascertained to a nicety. The use of meters also often enables a reduction in the quantity of steam used to be effected. The only argument that can be used against the installation of steam meters is that they are fairly expensive. The question therefore arises as to whether the savings they can effect are sufficient to pay interest, depreciation, and other standing charges on the meters. Those are not matters that can be touched upon here; they depend on local conditions and the cost of suitable meters, and advice from meter manufacturers should be taken before installing plant of the kind.

Steam meters work, as a general thing, on the pressure-drop principle, and in the majority of types a throttle plate, consisting of a diaphragm with a small hole in the centre, is placed in the steam pipe. When the steam flowing has to pass through this orifice, the constriction causes a proportionate increase in the speed with which the steam moves, and this increased speed brings about a drop in pressure, which is measured, in the steam meter, by one or other of the many types of manometers. From the apparatus, electrical connexions carry the readings and changes to a dial situated at any convenient point. The great trouble in connexion with meters of this type is that they are not accurate when the steam flow is small, and they cannot be guaranteed for flows of less than one-tenth of the maximum.

There is another type of steam meter which so far has not been too successful, but which would seem to be on right lines and capable of considerable development. That is the type known as the vane-wheel turbine meter, and whilst at one time the exception was to find one of these working accurately, the construction has been so much improved that to-day thoroughly reliable meters of this kind are obtainable, measuring with accuracy down to one-tenth the maximum flow. One of the chief advantages of these meters is that they not only cannot be damaged by overloads, but will record them correctly. So far, the vane-wheel turbine meters have been liable to err through wear in the bearings, dirt or water in the steam, steam leakage through the glands in which the spindle worked that operated the recording mechanism, and through friction brought about by endeavouring to keep these glands steam-tight. The latest design is one in which the vanes are damped down by being made to rotate in water condensed from the steam, under which conditions

compensating mechanism could be, and in some types is, introduced. The makers of these types of meters point out that the wear on the bearings is reduced, and that, as the normal flow of steam is upward, it is a comparatively simple matter to arrange that the force of the steam on the vanes just about balances the weight of the rotor, so that this floats in its bearings without a positive thrust on either side. A further point is that the whole of the mechanism is placed in a shunt circuit, thus preventing any oil or dirt in the steam from having to pass through the meter. The wheels of the counter train run in water condensed from the steam, and the whole of the counter mechanism is enclosed in an air-tight chamber.

Waterways.

From time to time proposals are made to the effect that the more or less derelict canals of this country should be reconditioned and put into active service, the proposers waiving altogether, apparently, the question as to whether any goods could be carried by canal which are not at present carried by road or rail. If there are no such goods, then all that would be done by reviving our canals would be the robbing of a by no means too well-fed Peter to feed an aged and decrepit Paul. What seems to be forgotten is that the improvement of the transport facilities of this country is of no value in itself; no country can get rich on good roads or big railways or far-reaching canal networks. What is needed is production of goods; wheelbarrows are useless unless there is something to put in them. A few days ago the writer heard Mr. W. W. Grierson speak on this subject at the Institution of Civil

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

WESTMINSTER BANK
LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Engineers—Mr. Grierson is the new president—and as his duties, professionally, include the supervision of the chief canals of the country, his opinion may be taken as of considerable value. He said that it is difficult to see any hope that canal transport would prove economical to-day in England. A considerable number of the original canals are derelict and the rest are far from prosperous. It was questionable whether any comparison could be made with canals on the Continent, where geographical, physical, and political conditions were so different. Another factor, which did not obtain on the Continent, was that traders in England desired speedy delivery of comparatively small consignments. Further, in Belgium and Germany both canals and railways are State-owned, and the general policy in both countries, for certain reasons, has been to foster water-borne traffic. In his view, he said, it seemed that any State-aided scheme for the improvement of transportation in Great Britain would be more likely to succeed if it assisted the railways rather than a system which is nearly obsolete in this country.

Railway Gauges.

The president then referred to the development of rail tracks from the earliest examples to the latest types, and suggested that modification in the proportions of the constituents of ordinary steel rails and the development of special steels and processes of heat treatment presented scope for a possible lengthening of the life of rails. The standard gauge of 4 ft. 8½ in. was probably a legacy from the earliest platways built to take an ordinary country car. Brunel considered that high speed on the alignment followed by the Great Western Railway Company would be obtained most safely and economically by the use of a broader gauge; and a Royal Commission appointed in 1838 recommended a gauge of 6 ft. 2 in. for railways in Ireland for reasons similar to those which had influenced Brunel. Nevertheless, want of uniformity led to the scrapping of the broad gauge in England. The serious-

ness of the gauge problem is now fully recognised in Australia, where the main trunk lines are of three gauges, which involves numerous and costly delays and transhipments. In India, where the important centres are connected directly by through routes, the problem is of less moment. The South African railways demonstrate in a remarkable manner, largely due to development in the last few years of locomotive power, the capacity of the 3 ft. 6 in. gauge for dealing with heavy traffic at high speeds and of providing very comfortable passenger accommodation. It seems possible that modern development may proceed along the lines of narrower rather than broader gauges.

Low Temperature Carbonisation.

One important general application for the low temperature carbonisation of coal is in the iron and steel and general metallurgical industries, treating bituminous coal dust and smalls to obtain smokeless solid fuel in large pieces, equal to screened coal, as well as tar and light oil, and using all the rich clean gas for the heat treatment of steel. At the present time the general method adopted is of course hot, uncleaned producer gas, but there is also employed coal or other solid fuel in the lump form, pulverised coal, oil, natural gas, and coke oven gas. In this connexion a highly interesting paper, "Fuel used in Heat Treatment of Steel," has been read in Philadelphia by Martin J. Conway, Fuel Engineer to the Lukens Steel Company, Coatesville, Pa., well known for boiler plates and flange steel, who are going to take all the gas, as already mentioned in these columns, from a "K.S.G." low temperature carbonisation plant. Mr. Conway sums up the advantages of low temperature carbonisation gas as against hot uncleaned producer gas as follows:—(1) Cleaner operating conditions without soot and deposits in the gas main and entire absence of ash and clinker. (2) Constant calorific value of the gas, which does not obtain with producers, especially because of the necessity of clinkering. (3) Ease of control, due both to constant pressure and calorific values, thus allowing of highly efficient automatic gas supply with constant heat. (4) Flexibility in the sense that low temperature carbonisation gas of this character can be piped with the greatest ease to any part of the plant, whereas hot, dirty producer gas cannot be sent for long distances, and the supply pipes lined inside with firebrick are costly to install and also keep in operation. (5) Great accuracy in the actual heat treatment of the steel in the sense that the flame can be altered instantly so as to give a slightly reducing or slightly oxidising atmosphere at will, with continuous maintenance of these conditions in a manner impossible with producer gas or oil firing. (6) Various other advantages which include easy metering of the gas and therefore very scientific control of the furnace operation, while it is not necessary to pass the gas through regenerator chambers, so that the whole of the equipment of this character can be thrown on to preheating the air and giving still higher combustion efficiency.

It may be remembered that the "K.S.G." plant, now being erected by International Combustion Engineering Corporation, adjoining the Lukens Steel Works, consists of six standard rotary cylindrical steel retorts, each with a throughput of 80 tons of coal per 24 hours, that is, 480 tons for the complete plant. These consist of a very large slightly inclined steel cylinder, 85 ft. long and 5 ft. 6 in. diameter, carrying an outer cylinder 72 ft. 9 in. long and 10 ft. diameter, running at one revolution in 90 seconds, driven by suitable gearing and giving 2½ hours' carbonisation with a maximum temperature of 925-1025 deg. Fahr. by means of external heating along with steaming of the charge, and blending if necessary with a small amount of the smokeless fuel smalls. Obviously the future of low temperature carbonisation, and especially in Great Britain, lies in co-operation with furnace equipment, using all the gas, for example, in steam boiler plant, and pottery, general ceramic, and glass works, as well as, of course, in the iron and steel and general metallurgical industries.

Near East Markets

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended November 8:—

Grain.—A general collapse in grain prices on consuming markets has brought about almost complete stagnation of fresh business for prompt shipment here; in fact, practically the only movement there has been during the week was in connexion with the fulfilment of old sales and the shipment of a few parcels of new maize, chiefly to Rotterdam. Some sales, however, have been effected for second half November shipment, both for maize and barley to U.K. and Continent. The change in the weather is expected to cause an improvement in the position in Western Europe and, as a matter of fact, yesterday's telegrams indicated a somewhat better feeling. Freights have had to give way about 6d. to 9d., due rather to the nervousness of charterers than to any excessive supply of tonnage. Parcels have been booked at from 14s. 9d. to 15s. for the Continent, and a large parcel was accepted at 14s. to complete a steamer about to run into demurrage. The position at Constantza is somewhat easier, and steamers are gradually obtaining their cargoes at about 8s. 6d. to 9s.

Timber.—Although there is no improvement in the trade in general, the demand for space, especially to South Italy and North Africa, is well maintained owing to the limited time remaining before the possible closing of navigation. A few hundred waggons have been booked for Italy at rates varying from £11 Sicily and £13 West Italy. Shippers are offering £11 for the South of France and North Africa, but so far no engagements at these rates have been reported. A fairly good demand is maintained for Syria and Palestine at £11, £11 10s. Greece is less in demand, and although steamers are unwilling to accept the present rate of £8 5s., no bookings at higher rates have yet been reported.

Weather and Crops.—The temperature fell considerably from the 4th till the 6th owing to cold easterly winds, but otherwise the weather has remained mild, cloudy, and relatively moist. Precipitations locally have been in the form of intermittent drizzles, but nearly an inch of rain has been reported from some districts. A Government report issued on the 7th summarised the position as follows:—"In the course of the past week only partial rains have been registered although the sky was continually cloudy. The nights, especially in the Northern regions, were cold, whilst in the old Kingdom fog and winds were experienced in many districts. Shortage of atmospheric precipitations is still felt in Central Bessarabia and in Moldavia, as well as in the counties of Muscel, Alba, and Turda. In general, however, the ground has sufficient moisture and sowings are being carried out under good conditions." A shortage of seed wheat and rye is reported from the County of Ismail. There is no news yet as to the extent of the autumn sowings. If these fall below the possible maximum, this will not be so much the fault of the weather, which during the last weeks has in general been very favourable, but rather to the antiquated methods of cultivation with ox traction, which does not allow full advantage to be taken of the climatic conditions. The Government is favouring the introduction of machinery and motor tractors, but though motor traction is increasing rapidly in the towns, the modernisation of agriculture is retarded by the large number of small holdings into which the bulk of the land is divided, and the lack of a well-organised system of co-operation, which counteracts the advantage enjoyed by this country in the shape of a plentiful supply of cheap liquid fuel.

Sulina.—Bar.—The depth on the bar is maintained at 24 feet, the dredgers working whenever the weather permits. River.—The depth of water in the river has increased to 23 ft. 6 in., and, in view of the greater volume of water coming down from Central Europe, it is expected that the depth will shortly improve to 24 ft. without the necessity of further dredging on the shallows.

Constantza.—This week about 11,500 tons of grain arrived from the interior and about the same quantity was exported, mostly to Antwerp-Hamburg range, although 1,800 tons went to Hull and a few hundred tons to Mediterranean ports. Two 8,000 ton steamers are loading under the elevators at time of writing, whilst three are waiting for berths and six others are expected to load grain. Fourteen vessels loaded over 46,000 tons petroleum products and three oil fuel for bunkers.

Bulgarian Report.

Bourgas, November 2.—Our freight market is very quiet owing to weak grain markets abroad, and very few transactions have been concluded at 10s. 6d. to 11s. for Antwerp/Rotterdam/Hamburg. To Mediterranean destinations the business concluded has also been insignificant. The weather has been generally rainy and foggy, favouring autumn sowings.

At a recent meeting of the Directors of the Ionian Bank, Ltd., Mr. Arthur George Mitton Dickson was appointed a Director of the bank.

A recent Roumanian Ministerial Decision provides for a reduction of the valuations of woollen and worsted piece-goods and hosiery (on which the 2.2 per cent. turnover tax is levied on import); and provides that for the purposes of calculating the luxury and turnover tax applicable to yarns, piece-goods, and other wares of artificial or vegetable silks, the valuations are to be taken as 80 per cent. of the valuations established for real silk goods.

THE TRADE OF CYPRUS.

During the quarter ended September 30 there was an increase of £75,000 in the value of the imports of Cyprus over the figure for the corresponding period of 1928. To this the principal contributors were coal, cement, cotton yard and thread, fertilisers, leather, machinery, and motor car and motor cycle tyres. Decreases were recorded in wheat meal and flour, unmanufactured tobacco, timber, and motor cars. In exports there was also an increase of some £52,000, made up chiefly by carobs, barley, wheat, raw hides and skins, cumin seeds, and mules. Raisins, potatoes, asbestos, raw cotton, pyrites, and wool showed a slight drop.

NEAR EAST MARKET REPORTS.

The November issue of the Monthly Review of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

The three months under review have been marked by a gradual decline in cotton quotations, due partly to good crop reports and partly to general financial stringency. Prices have reacted from the highest point of 34½ dollars at one time reached during the quarter to 29½ dollars for Sakellaridis and from 23¼ dollars to 19½ dollars for Ashmouni, without apparently attracting any important demand generally. It is true, however, that Ashmouni, owing to its relative cheapness in comparison with American cotton, has been in favour and nearly the entire old stock has been disposed of, while a fair amount of new crop has also been sold forward. The carry-over at the end of August, amounting to 1,164,000 kantars, was composed of 732,000 kantars of Sakellaridis, 293,000 kantars of Ashmouni, and the remainder of different varieties such as Pilon, Maarad, and White. The Sakellaridis carry-over contained 230,000 kantars belonging to the Egyptian Government, which may be discounted for statistical purposes, but the remainder, together with a very large stock of Sudan Sakels in Liverpool and a prospective crop of 2,750,000 kantars of Egyptian Sakel this year seem to have assured spinners of supplies at reasonable prices. The difference between Sakels and Ashmounis has fallen from 12½ dollars to 9½ dollars, with every prospect of a further narrowing unless a demand for Sakels eventuates. The spot market has recently become active, but exports remain small for the time of the year. The rise in the discount rate of the Bank of England has restricted trade, and very little cotton is being stocked either by exporters or spinners, with a result that the demand is from hand-to-mouth, a factor which has not tended to strengthen prices. Crop estimates seem to have crystallised around 7,850,000 kantars for Egyptian and 14,915,000 bales for American cotton, figures which, it is thought, ensure ample supplies of both classes.

The three months under review witnessed an almost absolute depletion of stocks of cotton seed, the figures returned on August 31 being 71,341 ardebs, which is barely sufficient for local consumption for a month. The first arrivals of new crop were eagerly bought up at good premiums, but larger arrivals and lack of freight caused premiums to diminish and the accumulation of stocks led to a heavy fall in the price of futures. Quotations lately have touched almost a record low level, but a sound commercial demand is manifest and a further decline is considered likely. The cotton goods market has been active and prices have ruled steady; Manchester goods have been in satisfactory demand. Business in flour has been irregular and has been greatly influenced by the wheat market, but the demand for Australian, French, and Italian flour has been satisfactory. Stocks are still abundant and holders are not pressing sales, as it is thought that the tendency of the market appears to be in favour of an improvement. Sugar arrivals have been abundant, but actual prices were low and attracted business. Trade in imported rice has been very restricted, owing to reduced stocks, but the demand for Egyptian rice has been satisfactory at easy prices, due to an abundant crop. There has been very little export trade in cabots, and consequently the tone of the market has been irregular. Coffee has been steady and active. The gunnies market has been weak, and prices for cotton sacks have declined, but cereal bags have been in good demand.

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

for local consumption and for export to Syria. Business in cereals has been active and crops generally are abundant.

The Sudan.

As usual at this time of the year, markets generally, during the quarter, have been featureless, natives being occupied in the cultivation of the new crops. The situation, although quiet, is sound, and a period of activity is expected in the near future, following upon good rains. Locusts this year are causing some anxiety and their depredations have been considerable in certain areas, both to cotton and dura. Whether the latter crop will be seriously affected is, however, not yet known, but the rapid ripening of the cereal should prevent further extensive damage. All cotton in the Gezira Irrigation Scheme has been planted, 159,512 feddans having been sown. Some re-planting has been found necessary, owing to excessive moisture, as a result of exceptionally heavy rains during July, and a brown rot, from the same cause, has destroyed a certain amount of seedling cotton. Generally speaking, however, the crop is well up to average and a normal yield is anticipated. The 1928/29 gum season is now virtually over, although inquiries from overseas buyers still continue. About 10,950 tons have been received this season, as against 16,350 tons for the corresponding period last year and, if inferior hashab gums are also taken into consideration, the estimated total shortage on the crop approaches 7,500 tons. A certain caution is being displayed by sellers in regard to contracts for the coming season, and the new arrivals are being awaited with some anxiety. The sesame market has been uniformly weak and stocks on hand have exceeded demand. Egypt has remained a consistent buyer of small quantities, but with the advent of the new crop contracts, prices have slumped to £E15.500 for white and £E15 for red. Stocks on hand are estimated to be in the neighbourhood of 2,500 tons.

In the absence of stocks, the ground-nut market has been stagnant, but the new crop is expected to be larger than that of the previous year. Quotations for delivery November/December are £E11 per ton f.o.r. Port Sudan. The cotton piece-goods market has been dull, but prices have been maintained in anticipation of a quickened demand from natives when the cultivation of crops is completed. Prices for Japanese cabots have fluctuated between 11s. 4d. and 11s. 10d. per piece c.i.f. Port Sudan. Coffee has exhibited a dull tendency, but quotations have remained firm and are expected to harden in the near future.

Palestine.

The plentiful harvest, with reasonable prices, gave promise of a prosperous period, but the serious rioting which took place during the latter half of the quarter under review caused a sharp set-back and the continuance of the boycott and the animosity between Arabs and Jews has had a most depressing effect on trade. In spite of the serious troubles, however, business was soon resumed, but on a very curtailed scale, and certain facilities have had to be granted in the payment of bills, etc. At the time of writing, relations are still very strained, but it is thought that recovery from the recent disturbances would be rapid if normal commercial relationships were resumed. The orange crop is making satisfactory progress.

ABYSSINIAN MARKET FOR WATCHES AND CLOCKS.

Among the more promising of the newer lines of trade in manufactured articles opening up in Abyssinia is that of watches and clocks. The present volume of the trade is small, but from a comparatively recent start it is increasing at the rate of 20 per cent. to 30 per cent. per annum (says the United States Minister and Consul-General at Addis Ababa in a recent report). Customs statistics are not available, but retailers estimate that during the current year about 1,000 watches, with a value of £1,500, have been sold, and the prospect is that sales will nearly double that number next year. Less than 100 clocks per annum are now being sold, but the demand is increasing.

About 70 per cent. of the demand is for pocket watches and 30 per cent. for wrist watches. Of the pocket watches three-quarters of the total sold are with hunting case, the remainder being open face. Gold-plated watches make up 25 per cent., silver watches about 30 per cent., and nickel watches about 45 per cent. of the total sales. Ornamental cases are preferred. Those found in local shops have such designs in the metal as St. George on horseback, King Tafari, Empress Zeoditu, a sun with rays, a lion, or a horse. The sun design appears most popular. Dials are generally plain. Arabic numerals are preferred to the Roman. Three-fourths of the total sold are in size 18. Comparatively thin watches appear to meet with most favour.

There is no watch manufacturing industry in Abyssinia, nor is there likely to be one for many years to come. All watches are imported,

and fully 85 per cent. of the total come from Switzerland. France, England, and Italy supply each about 5 per cent. of the total. Clocks come exclusively from Germany. Some cheap American watches have been imported in the past, but they are said to have proved too plain in case design to attract the average Abyssinian purchaser. Swiss watches lead because the manufacturers of that country have catered especially for the trade. Their designs and trade-marks are well established and known.

The increasing demand for watches is followed closely by an increased demand for chains. Low-priced chains are mainly required. Rolled-gold chains come first in favour. Silver chains are sold, as also are those with gilt, nickel, and gold finish. More expensive chains are made by local jewellers by hand from gold of the country. Price depends usually upon the weight of the chain, which is of solid gold of better than 18 carat quality. This trade is much less important than that in watches, but it follows the watch trade closely and might be considered at the same time. The demand for clocks is not equal to that for watches, but it has been observed to be following the increase in demand for the portable timepiece. The preferences of the purchaser are not yet well developed excepting as to price, which must be modest.

Time has not heretofore been an important consideration in Abyssinia. The sun, moon, stars, and intuition have served the purpose of marking the hours of day or night. However, the country is now rapidly taking up Western ways and is coming more and more into contact with international trade. Officials of the Government now find watches necessary, whereas in an older day they did not require them other than for ornament. School facilities on European and American bases are being developed. The greatest potential demand is among the younger generation now attending the schools. A few dozen students attended less than ten years ago, but there are now thousands, with thousands more in sight. Money to buy watches is becoming more readily available.

Appropriate repair facilities are, of course, essential to encourage the demand for watches, and such facilities already exist. The repairers are mainly Armenians who have learned their trade elsewhere. The Abyssinians frequently break stems and springs in winding. Many crystals are broken. Spare parts come mainly from Switzerland.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at September 30, 1929, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve, £E1,462,500; special reserve, £E1,340,625; current, deposit, and other accounts, £E13,584,815; Egyptian Government, £E15,051,236; Sudan Government, £E116,880; Mixed Tribunals, £E2,017,854; bankers' accounts, £E460,682; cheques and bills payable, £E106,055; sundry other accounts, £E2,429,748—£E39,595,304. MERSIN AND THE CILICIAN DISTRICT OF TURKEY.

The proposed construction of a modern port at Mersin, which is one of the projects included in the general public works programme of the Turkish Government, has tended to focus attention on the region served by this undeveloped port (says an article in the United States "Commerce Reports"). This region, known as the Cilician district, is probably the richest and most active agricultural section in Turkey. Although Mersin, which is situated on the Mediterranean Sea, close to the Syrian border, is at present not much more than an open roadstead, the volume of trade through this port has been fairly well maintained, despite the lack of facilities.

The Cilician plain, located in the southern part of Turkey, is roughly crescent shaped, with the Taurus Mountains on the north and west, the Giaour-Dagh Mountains on the east, and the gulfs of Mersin and Alexandretta on the south. The plain has an area of approximately 5,000 square miles, is 100 miles in length, and averages about 50 miles in width. The area under cultivation is estimated at 1,350 square miles, or about one-fourth of the total, according to semi-official sources. In spite of centuries of cultivation the soil is extremely fertile. It is composed chiefly of limestone silt, brought down from the Taurus Mountains by the three rivers which have built and which water the plain—the Tarsus, the Siehan, and the Jeyhan. The plain has a semi-tropical climate and is protected from the cold winds of the Anatolian Plateau by the Taurus Mountains. Official statistics covering the population of the Cilician plain are not available, as a considerable portion of the Taurus and Giaour-Dagh Mountain regions is included in the vilayets of Mersin, Adana, and Jebel-Bereket, among which the plain is divided.

Cotton, wheat, barley, and sesame constitute the principal crops of the Cilician district. It is estimated that approximately 50 per cent. of the total area under cultivation during normal years is devoted to cotton, 25 to wheat, 10 to barley, 5 to sesame, and 10 per cent. to miscellaneous crops, as oats, maize, and millet. For 1927, production of cotton totalled 27,602 metric tons, wheat 85,891, barley 29,457, oats 11,308, maize 128, millet 1,045, and sesame 2,312. From the point of view of financial returns, cotton is the outstanding crop of this region. The average size of the farms is larger than in any other part of Turkey, being estimated by the 1927 census at 108.3 dunums (4.4 dunums equal 1 acre) in the vilayet of Mersin, 75.4 dunums in the vilayet of Jebel-Bereket, and 57.8 dunums in the vilayet of Adana, as compared with an average of 25 dunums for the entire country. In Turkey generally, however, the use of modern machinery is still far from widespread, because most of the farms are too small to necessitate, and the peasant farmers too poor to purchase such equipment. Interest rates on agricultural loans, furthermore, are extremely high, ranging from 18 to 22 per cent., and are an important handicap to the more extensive purchases of agricultural machinery.

In the field of animal husbandry, the breeding of sheep and goats represents an important activity. Exports of wool from the Cilician district are considerable, with England and the United States the principal purchasers. Production data are not available, but shipments of wool during 1927 and 1928 via the port Mersin, as reported by the Director of Maritime Commerce, were 734 tons and 1,356 tons, respectively.

Manufacturing in the Cilician district is confined chiefly to the cotton industry. There are approximately 20 ginning mills in operation in the district, two important spinning mills near Adana, and three fairly large cotton seed-oil plants. As a result of the new tariff large increases in duties are levied on imported textiles, which are expected to have a stimulating effect on production of

cotton and manufacture of textiles in this district. The lumber industry, which is also of considerable importance, has been handicapped in development by lack of transport facilities. It has been confined chiefly to the vicinity of the larger streams and of the Baghdad Railway. The Taurus and Giaour-Dagh Mountain regions are the centre of the industry, and shipments via the port of Mersin are mostly to Syria and Egypt.

A considerable share of the import trade into the Cilician district is handled through the sub-agents or subsidiaries of Stamboul firms, this being particularly true in general merchandise lines. Foreign trade activity—especially in Mersin and Adana—is largely in the hands of Levantines of various origins. In spite of two years of bad crops, not only in this district but throughout Turkey, the trade in staple lines and necessities in this region had held up fairly well. As yet, there are few firms in Adana and Mersin engaged in general merchandising which have sufficient capital to import direct from foreign countries. But an exception must be made in the case of agricultural machinery, the major part of which is sold through direct representatives of the foreign manufacturers. There is a growing tendency in all lines toward direct relations with the foreign manufacturer, thereby eliminating the charges attendant on transshipment.

Cotton and Cotton Goods. THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 13:—

Egyptian Futures.

Sakel Contract.—The majority of commodity markets have latterly appeared to reflect or anticipate the after-effects of the financial crisis in New York in a more direct manner, consequently a general further marking down in cotton values has again been experienced. The decline in Sakels has not been as severe as in other growths, due mainly to the action of the Egyptian Government expressing their intention of accepting tenders against the November position in Alexandria at 27 dollars, a figure which, at the time of writing, is only a few points below the ruling level. Ideas here of the potential buying power behind the scheme are still vague, but as, since the initial declaration, a further official notification has been issued stating that the operation will be extended to Januarys at the same basis, it appears probable, should the occasion arrive, that quite a considerable amount of cotton may be involved. With this in mind, operators, both here and in Alexandria, are naturally shy of entering into short commitments, and holders of actual are inclined to run their cotton unhedged, or, as a temporary measure, to take advantage of the premiums on distant positions to put out the necessary sales. The result of this policy is apparent in the closing in that has taken place in the local market between near and distant trading positions. The view we expressed in our last report than an increased offtake for Sakels should commence to develop owing to the reasonableness of the existing level and the attractive basis now obtaining in Egypt, appears to be gaining ground. Since we last wrote, spinners report a distinct improvement in yarn business, with further good orders only being withheld because of the prevailing unsettled and perhaps too pessimistic views of outside conditions. Under existing circumstances we cannot advise any out and out commitments; at present actual cotton is weighing too heavily to permit of anything but a very slight advance, whilst, for reasons stated previously, there is no margin for the time being on the "short" side.

Upper Contract.—Trading in this contract during the majority of sessions since our last report has been of a very light character, but, in view of the fact that values have worked down fairly close to the Government limit of 19 dollars, only moderate price recessions have been recorded. The trade have only bought sparingly out of the local stock, but rather more c.i.f. inquiry has been in evidence. Sentiment in most markets is so overwhelmingly "bearish" that we hesitate

to advise purchases; at the same time, we must point out that, at the ruling level, near positions in our markets are considerably undervalued when compared with the basis of the majority of offers coming to hand from Egypt.

Egyptian Spot.

Spot business has been much restricted this week and buyers have shown little interest except for the low and inferior qualities, in the demand for which there has been quite a small revival, and for Uppers within the usual range. Quotations have been much steadier and the better qualities in Upper even show a slight advance on the week. Spinners are finding the present level attractive and we are inclined to think that in Sakel it has been the poor selection on offer, rather than any unwillingness to buy, which has hampered business. It is by no means certain that the bottom has yet been reached, but any halt in the decline is welcome, and, as past experience shows, these "halting" periods are generally the prelude to a recovery.

Sakel has again suffered from neglect, particularly amongst the medium and better qualities. The "off" and "inferior" grades have met a very fair inquiry, but we doubt if the results have been in proportion to the demand.

Uppers.—"From pass to 20 on" has once again proved the most frequent inquiry. Bargains are not so easily come by, however, as they were a short time ago, and, as any cotton based on Alexandria appears disproportionately dear when regarded in terms of points on Liverpool futures, actual business has dwindled considerably. A necessary period of adjustment between buyers and sellers is now in being as regards Upper prices.

Pilion has been in moderate request only.

Nahda, White, Maarad, etc.—Slightly more inquiry, but results very limited.

Tokar Sakel.—Entirely neglected.

Sudan Sakel.—Only a moderate business has taken place.

C.i.f. business.—There has been more doing in certain quarters, and as confidence returns this is likely to grow rapidly in extent at around current levels. Forwardings last week were returned as 8,382 bales Egyptian and 1,829 bales Sudan.

Spot Sales.—These have been estimated at 1,600 bales Egyptian and 250 bales Sudan Sakel. Quotations of Sakel show a net decline of 10 points; Uppers an advance of 5 points for Good and above. Pilion shows no change on the week. F.G.F. Sakel to-day, 14.80d. F.G.F. Upper to-day, 10.41d. F.G.F. Pilion to-day, 11.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended November 7:—The market during the past week has been fairly quiet and fluctuations have been small; the tone at the close to-day was steady. The week's summary of price movements is as follows:—Sakellaridis: November, 27.77 dollars, 0.03 dollars down; January, 28.20 dollars, 0.55 dollars down; March, 28.60 dollars, 0.80 dollars down; May, 28.90 dollars, 1.15 dollars down; July, 29.25 dollars; November, 29.65 dollars. Ashmouni: December, 19.55 dollars, 0.13 dollars down; February, 19.72 dollars, 0.43 dollars down; April, 20.02 dollars, 0.61 dollars down; June, 20.31 dollars, 0.69 dollars down; October, 20.71 dollars.

Notes of the Week.

The Wailing Wall.

As is very well known, the Special Commission mentioned in Article 14 of the Mandate for Palestine has never, since the failure of the British Government's attempt to establish it in 1922, been formed, and the whole question of the Holy Places in Palestine is still in a somewhat anomalous state. The main difficulties in the formation of such a Commission concerned the precise nature of Catholic representation upon it and the faith, Catholic or Protestant, of the Chairman. Failure to implement this Article 14 did not, however, greatly matter until the problem of the Wailing Wall arose in such virulent form. On this matter the British Government has proceeded with the greatest circumspection and caution, yet a disaster has not been avoided. The provisional arrangement which is being enforced at the Wall is displeasing, apparently, to both Muslims and Arabs, though it has much to commend it as a provisional arrangement. But a definitive ruling must somehow be reached. Yet how? That is the Mandatory Power's problem. The Foreign Secretary inquired last week of the Permanent Mandates Commission at Geneva whether an international Commission might not be set up to solve this particular question. The suggestion seemed not unreasonable, seeing that no Christian interests—the factor which had nullified previous attempts to set up a mixed Commission for the Holy Places—were involved, the Wailing Wall being a matter between Muslim and Jew alone. Apparently, however, this British proposal did not commend itself to the Mandates Commission; if so, another deadlock confronts those who would have this affair, ridiculously petty in itself, but capable, as the world knows, of assuming gigantic dimensions, regulated for good and all. It will be remembered that the terms of reference of the Palestine Commission of Inquiry, whose members, by the way, should be back in England by Christmas-time, did not extend to the Wailing Wall. So far as can be seen, therefore, the matter stands where it did, with little prospect of immediate advancement.

The Government of Palestine.

Good may, however, come out of evil; and if the fact that the League of Nations is unwilling at the moment to help the Mandatory Power in Palestine with advice, it may

result in a more rigid determination by the Government of Palestine to govern. Such an effect would by no means be displeasing to that large number of intelligent Englishmen who deplore the attempt hitherto made by the local Administration, which, of course, receives its orders from the Home Government, rather to cultivate a mental system of checks and balances, to preserve an attitude of holding the ring while Arab and Jew, if they must, spar between one another, than, quite simply, to govern. Great Britain in Palestine has gone slowly, if only because of her mandatory position and the multitude of interests involved; but if the League of Nations is unwilling now to assume that responsibility to which, apparently, the Mandatory Power has so long paid deference, the way would seem clear for a more definite, direct line in administration. We should be the last to criticise the local administration—unqualified vilification of the man on the spot is never indulged in by Englishmen except in unworthy moments—but the present does seem a fitting occasion for reminding the world of the enormous difficulty, the impossibility, we should rather say, of governing a country if one eye has to be kept cocked on Geneva and the other on a clear ring for Arab versus Zionist. In the event, it seems, this policy has not been vastly pleasing to the League, to the Arabs, or to the Zionists. If there is a case against the Government of Palestine, which, we repeat, only carries out the instructions of the British Government, it is precisely this: that instead of governing, an attitude of watching, waiting, and hoping has been indulged. To such a charge there is an obvious answer, an answer which may, moreover, be perfectly rebutting. If a policy laid down by the British Government be unworkable, then little blame attaches to the men who attempt to work it out; if, on the other hand, the British policy in Palestine is quite feasible, quite sound, and quite just, it is indeed difficult to assume that the local Administration is without blame. From such a conclusion there appears to be no escape, for by the conduct of a mandated people the worth of a Mandated Power must be judged. It is sheer hypocrisy to say that Great Britain is not responsible for the conduct of Arabs and Jews in Palestine; it is. Of course, the Arabs ought not to have shown violence; of course the Zionists ought not to have lent themselves to the charge of provocation. The fundamental point is, that the Arabs were known to be, when profoundly touched, a

violent people, and the Zionists to be, on occasion, a provocative people. And Governments should be guided at least as much by knowledge as by hope.

Arab and Jew.

It might appear, from this analysis, that the hope of Arab-Jewish *rapprochement* in Palestine is illusory. But we do not believe it. The best Arab opinion recognises the existence of the Jewish community in Palestine, knows its value to the country, and certainly would not be a party to its disappearance. Similarly the best Jewish opinion recognises the existence of the Arabs in Palestine, and would be no party to their banishment from Palestine, even if such a course were possible. On these two facts must be built a *rapprochement*. The two peoples must come together, if peace is to reign in the Holy Land, from which, as we shall all soon be reminding ourselves, went forth the message of peace and good will to men. As for the British people, they are sufficiently well acquainted now with the facts of the situation to make further propaganda by either side, Arab or Zionist, seem nothing less than a pouring of oil on the fire. Cannot the Arab and Jewish leaders come unofficially together, to see whether, by an inevitable process of give-and-take, some means of understanding may be found? Manifestly, it would seem to the outside observer, the old policy and the old claims are no longer tenable: a "Jewish National Home" in Palestine can no more be built up in face of a fairly united Arab antagonism than Arab hopes of self-government can be realised on the basis of opposition to the Zionists. It is difficult to think that either side (and one must refer to "either side," for the official use of the phrase, a "Palestinian people" is but a fiction, now seen to be very unscientific) is so lacking in statesmen as not to find some ground of reconciliation, in which the seeds of co-operation may be planted. Naturally, germination must be very slow—words have been uttered, deeds have been done that are not soon forgotten—but that this is a season when the frail flower of good will should be planted is unquestionable. The act should, we think, be performed unofficially, for the banging of heads together by Government can scarcely promote good will. If the Zionist case and the Arab case be equally stripped of all that is not absolutely indispensable, surely some basis of collaboration might be found between two peoples who are at the moment only accidentally, as it were, in conflict. In this connexion we should like to quote some wise words by Dr. Einstein, who seems to have changed his attitude a little since the actual disturbances in Palestine last August. In a recent Interview with *L'Oeuvre*, the Professor is reported to have said that the Jewish work of upbuilding Palestine was neither possible nor desirable, unless it proceeded from an understanding between the Jews and Arabs, that the Jewish people must realise the futility of resentment because of recent events in Palestine, and that it was for the Jews, and the Jews alone, to seek peace and the co-operation of the Arab people. To allow such wise words as these to drop unfructified would be folly on the part of the Arabs, who, we hope, will cherish them and produce similar buds to adorn the garden of good will in Palestine.

Progress in Greece.

The story that M. Maris, Greek Minister of Finance, was able to unfold to the Chamber in presenting the Budget for 1930-31 last week is calculated to rouse the envy of more countries in Europe than Greece's immediate neighbours. In broad outline he held out the prospect that in fifteen years one-half of the Public Debt would have been redeemed, while for the current year there would be reductions of twenty per cent. on the income-tax, licences, house-tax, the tax on movable property, the tax on sheep, goat and pigs, and the tobacco tax. The tax on oil is to be reduced by more than twenty-five per cent., and the tax on agricultural produce is to be suspended for two years. For the rest M. Maris had a favourable picture to present of progress of the national economy in all branches, commerce, industry, agriculture, and shipping, and drew

attention to the fact that Greece was paying out of income for various works of public utility. Few countries can have reacted more rapidly and with greater effect to political stability, and it is to be hoped that not only Greece, but also other States of South-Eastern Europe will take the lesson to heart. The present economic situation is a great achievement for M. Venizelos's régime, and the Prime Minister has not been slow to point out that it is the first time in Greece's history that a Government has actually abolished a tax, as in the case of that on agricultural produce. This state of things, however, increases the national responsibility to see that it is not interrupted by any untoward developments in foreign affairs. For the time being the sparring with Bulgaria and the friction with Turkey need not be taken too seriously, but it may well be prejudicial to Greek interests to keep Greco-Bulgarian and Greco-Turkish relations for an indefinite period on an unsatisfactory basis.

The Orient Express.

The adage which identifies happiness with no-history applies with even greater force to trains than to countries. Judged by this standard, the splendid train which carries its proud label "Calais-Constantinople" across Europe leaves much to be desired. Less than a year ago it had to confess itself beaten by snow-drifts, and for days remained a hopeless, helpless and foodless derelict in the Thracian uplands. Last week it was unceremoniously bombed on the Yugoslav-Bulgarian frontier. For a day or more Balkan journalistic imagination ran riot over the incident, and Belgrade was almost prepared to give the name of the Sofia shop where the Bulgarian brigands bought their collars. More reliable information records an uncomfortable experience, but reduces the episode to less fatal proportions. The train was brought to a standstill by the explosion of bombs on the line; a luggage van was derailed, and the engine was damaged. The expected attack by brigands, however, did not materialise, in spite of earlier reports of two passengers killed and several wounded. Whether the firing of a rifle by someone on the train, or the prompt action of a neighbouring Yugoslav frontier post upset the brigands' calculations, or whether there were no brigands at all and the outrage has to be written down as a political move does not appear. Fortunately for the passengers, nothing happened to them, while the engine left the train to its own devices, and ran alone to Tsaribrod to report the mishap. It does not seem to be established that any people were seen who might be supposed to have been the perpetrators of the outrage. From the fact that it took place near the part of the frontier which the Ouzounoff band is alleged to have crossed after its recent outrages in Bulgaria the same band is credited with this additional crime. If this should be the case, a further reason has been supplied to the Yugoslav and Bulgarian Governments for friendly co-operation in ridding both countries of a dangerous pest. The nationality of brigands is of much less importance than the need for their early extermination in the interest of international traffic that uses Yugoslavia and Bulgaria, and of good relations between the two countries.

Istanbul.

Turkey has every right to change the names of any of, or all her towns, and the world, which has almost forgotten that five years ago Oslo was still Kristiania, and has reconciled itself to Zagreb and, more or less, to Leningrad, will quickly abandon its sentimental leanings towards Constantinople in the convenience of the shorter Istanbul. Misgivings on the subject were aroused only on the strength of the alleged decision of the Turkish Post Office to refuse to accept any postal matter still addressed "Constantinople." Happily, rumour on this point has been proved once again a lying jade; the Director of the Constantinople Post Office has declared that letters bearing the old name will still be accepted for delivery and that no arbitrary action will be taken in regard to the change. The world at large that has any dealing with Turkey has been laid under such an enormous obligation by the Re-

publican Government in the adoption of Latin characters for the Turkish alphabet, that it may well hasten to adapt itself to the change of place-names. In this matter, however, the foreigner will have to display some of the assiduity to master all the new names that the Turkish people did in grappling with the Latin characters. "Istanbul" presents no difficulties to anyone who retains memories of philological studies at school; "Izmir" for Smyrna is not unreasonable, and "Trabzon" for Trebizond almost a boon. Repetition only will enable us to see Pera in "Beyoglu," and Stamboul in "Yeni-Cami." Adrianople is shortened to "Edirne"; Angora must henceforth be restricted to goats and wool, for the Turkish capital is Ankara; but most sympathy will be reserved for the traveller bound for Rodosto, who may well have journeyed the whole length of the Sea of Marmara before he realises that his destination was Tekirdag.

British Policy in Iraq.

The White Paper on "Policy in Iraq" (Cmd. 3440) published last week by the Stationery Office contains nothing surprising to those who have studied at all closely the problem of Anglo-Iraqi relations. One thing it does emphasise, however, and it is one on which too much stress cannot be laid, namely, that British policy in Iraq has had a constant goal. An atmosphere of suspicion of British motives had grown up in the last few years in Iraq which was by no means justified by the facts. It is no detractor of the late High Commissioner of Iraq, Sir Gilbert Clayton, to say that the policy which he advocated and which the British Government adopted had been long advocated by his predecessor, Sir Henry Dobbs. It is only recently, indeed, that the real nature of Sir Henry's attitude towards Iraq has been made public, and most observers have been surprised to learn that he counselled Iraq's admission into the League of Nations as early as 1928. More to him than to anybody, in fact, was it due that the present British Government could deem it evident that, in the words of this White Paper, "Iraq, judged by the criteria of internal security, sound public finance, and enlightened administration, would be in every way fit for admission to the League of Nations by 1932." The Treaty that will govern that entry is, as is well known, to be on the lines of the proposed Anglo-Egyptian Treaty, of which the most important provision, from the Iraqis' point of view, would possibly be that concerning British help of her Iraqi Ally in case of trouble. It is to be hoped that the new Prime Minister, Naji Beg as Suwaidi, and the new High Commissioner, Sir Francis Humphrys, will between them settle with the utmost amicability the terms of the new Anglo-Iraqi Treaty, and that no fractious opposition will be offered. British policy in Iraq is now crystal clear; its interests are definite and plainly declarable; and Iraqis have the immense advantage of knowing, what perhaps no other people of an Eastern country know concerning British policy towards that particular country, that British opinion is behind its Government.

INDIAN NOTES.

The Sukkur Barrage.

There has been a good deal of not unnatural anxiety, particularly in Bombay, which is at least nominally liable to bear the burden of any failure, regarding the soundness of the Sukkur Barrage Scheme. This has been chiefly due to the fear that its execution was entered upon with the undue optimism and neglect of inquiry into essential points that marked the Back Bay fiasco. The circumstances of the two schemes were, however, entirely different. The Sukkur project had been considered and examined for many years prior to Lord Lloyd's administration, which only gave it a much-needed fillip and support when financial support was necessary. Most people in a position to know regarded the work as a necessity if Sind was to preserve its share of the Indus water against the inroads of the better organised Punjab Irrigation administration, and as a perfectly sound financial pro-

position, if proper rates were charged for water and for land as had been done in the Punjab. It is satisfactory to find that the essential soundness of the scheme has been endorsed by the recent report of two Indian engineers—Sir M. Visvesvaraya and Nawab Ali Nawaz Jung Bahadur. With minor criticisms and suggestions these engineers approve of the scheme, and testify to the soundness of the work done. Allowance may, perhaps, have to be made for the well-known optimistic temperament of one of the eminent engineers who have made the report; yet it can hardly be doubted that the scheme has not yet justified any of the forebodings that were entertained about it.

The Real Test.

The reporting engineers, however, point out the necessity of the scheme becoming productive as soon as possible. This excellent, if somewhat obvious, advice is clearly dependent on administrative and political considerations. If the Bombay Government, from the distant recesses of Poona and Mahabeshwar, and in the face of the natural unwillingness of the Sind Muhammadan Zamindars, on whose vote they depend in Council, to pay high, though legitimate, rates for water and land, is able to enforce a strong policy, all will be well. The reporting engineers also recommend that the Government of India, which originally advanced the money required for the work, should be asked to relieve the Government of Bombay of the responsibility of the debt thus incurred. That is largely a matter of account. The real security for the debt is the Barrage itself, and the land for which it supplies water. If the work fails to pay, it is hardly likely that the financially hard pressed Government of Bombay could bear any considerable deficit. It is, we consider, altogether correct that the Government of India, which obtains considerable indirect benefit from the revenues accruing from the work, should bear the small risk incurred for the welfare of a not inconsiderable portion of the Indian Empire. But if it agrees to do so, the question arises whether it should not do so by direct arrangement with the Province of Sind, and, if necessary, by a more direct voice in, at least, its irrigational administration. This, however, raises the subject of the separation of Sind from Bombay: a large question though one which, we believe, will have to be taken up at no distant date.

Dr. Drummond Shiels, Under-Secretary for India, will preside at a meeting of the East India Association at the Caxton Hall on Monday, December 9, when a lecture on "Women in India and New Social Movements" will be given by Mrs. A. L. Underhill, who, as Mrs. Starr, rescued Miss Ellis in 1923 from the Pathan tribesmen by whom she had been abducted.

A NEW SESSION IN ROUMANIA.

The Roumanian Parliament is to provide no exception to the régime of hard work and disciplined attention to business that has been introduced for the whole country by Dr. Maniu's Government. A new session was opened on November 15, and the Royal Message outlined a programme of such formidable dimensions that the Chamber will have reason to be grateful for the exiguous showing that the Opposition makes in it, if it is to accomplish a half of the task allotted to it. The Government contemplates the introduction of legislation dealing with fourteen major subjects, many of which will entail a whole series of separate laws. A wide scheme of military re-organisation is promised; the better distribution of justice calls for measures dealing with the independence of magistrates, the unification of codes and the organisation of the Court of Appeal; higher education is to receive special attention, and Bills will be introduced for the regulation of universities, higher applied education, and polytechnic institutions, and for a "new and permanent organisation of the teaching of the Arts in Conservatoires of Music and Schools of Fine Arts, of a nature to respond to the actual needs of the national theatres and the State Opera." In the economic sphere, apart from the further tightening of the financial administration, there are to be introduced measures dealing with the production and organisation of power, Forestry administration and a cadastral survey; a law for the encouragement of agriculture will be supplemented by other measures for the organisation of Chambers of Agriculture, for agricultural insurance and for land settlement; industrial legislation is to be unified, and amplified with a view to promoting new openings for industrial production and rationalisation, and measures will be submitted for the regulation and encouragement of exports and for protection against unfair competition and speculation in the necessities of life. The sanitary organisation of the country is to be overhauled, and special laws are to be introduced dealing with social welfare, the education of the public in hygiene and the combating of infectious diseases and alcoholism. To promote the harmonious co-operation of capital and labour there is to be a law for regulating the relations between employers and employed in the professions, and new measures to regulate the immigration of foreign subjects into Roumania. At present the country has three different systems for the regulation of insurance; these are to be unified, the finance of insurance is to be reorganised and the administration of insurance companies investigated with a view to rationalisation. Finally, to satisfy the needs of the towns, a wide policy of public building will have to be inaugurated, and to this end it is proposed to recommend to Parliament the formation of a national building society.

For a country hardly yet emerged from a grave financial crisis, this is an ambitious programme; but the Maniu Government approaches its task in the confidence that its economic policy is now firmly established on a sound foundation and is already beginning to bear fruit. The hope is expressed that equilibrium is now permanently assured not only for the State Budget, but also for the separate budget of the Railway Administration. Thus, when the situation of the international markets shall have improved, Roumania should be able to count on the

measure of financial support which her needs demand and her resources justify. For the realisation of the Government's plans the kingdom requires political stability and freedom for the people from distractions in their efforts, now happily directed on more practical lines, to increase production. The attention at last being paid to the general improvement of agricultural methods could not attain its maximum effect so long as the transport system lagged behind the country's requirements. Experience in connexion with this year's substantial harvest suggests that the railways have for the moment caught up, if not the capacity of foreign markets, at least Roumania's ability to make use of them. Increased production, therefore, will fail in its purpose, unless simultaneously the producer is helped either by co-operative or by State-directed methods to reach a wider and a regular market.

In the matter of political stability Roumania's great need is that sufficient time should be given to the new economic policy to determine its value to the country as compared with the policy that it superseded. In this connexion it is of interest to note that the Liberal Party through its official organs still affects to believe that intrigue rather than its own fiscal and economic policy was responsible for Roumania's unpopularity abroad under the Bratianu régime. The refusal of foreign capital to come to the assistance of the latter is attributed solely to the machinations of the National-Peasant Party when in Opposition, with special reference to alleged activities in London. In so far as the argument may be advanced solely with the object of making party capital out of it, there would be no need for notice to be taken of it abroad, but as it seems to have become the *idée fixe* of the Roumanian Liberals, it may be useful to correct misapprehensions on the subject, in anticipation of the time when the Liberal Party will again be in power and it will be desirable for Anglo-Roumanian relations to remain as cordial and as close as under the present régime. The attitude of British capital, it ought not to be necessary to state, is not influenced by propaganda, whether Hungarian or Roumanian, but by something far more concrete and more convincing. In Roumania's case it had staring it in the face the actual legislation of the Liberal Government directed against foreign capital. Roumania was fully entitled to enact such legislation, and the Government, no doubt, considered that it was acting in the interests of the country. Foreign capital, on the other hand, was equally entitled to protest, if it found the legislation hostile to its interests, and cannot be blamed for adopting the attitude that, so long as legislation of this kind was persisted in, it could not regard Roumania as a favourable field for investment. When the National-Peasant Party sent its representatives to England to learn the views of British capital regarding Roumania, these had no need to decry Roumanian legislation, for financial interests in London knew all that it was necessary to know on this subject. The Roumanian representatives were more concerned to find out whether a change of Government in Roumania would entail an immediate change of attitude on the part of British capital; they were told that it would not, unless there was satisfactory evidence that there was a change of heart as well in Roumania's fiscal policy. When Dr. Maniu came to power, he reversed his predecessor's policy, and Roumania's prestige has been restored in the world of finance. Changes of Government in Bucharest need make no difference to her prestige, provided that a sound economic policy is maintained. The London money market does not stop to inquire whether M. Bratianu is anti-British or Dr. Maniu pro-British; it forms its own opinion of the trend of Roumanian legislation and acts accordingly. For Roumania, therefore, it should be the policy and not the personality that counts. The foreign world of business is not concerned with Roumania's party politics, but is interested in the openings for foreign investment that Roumania offers. When the door is closed to it, there is no need to look for propaganda or intrigue as the reason for its aloofness.

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, November 16.

Armistice Day.

Armistice Day was, as usual, celebrated in Church and Cemetery in Cairo, Alexandria, Port Said and Suez. In every instance the Service was much curtailed, and in the opinion of many it gained in impressiveness. In Cairo, the High Commissioner and Lady Loraine attended at both St. Mary's Pro-Cathedral and the British War Memorial Cemetery at Old Cairo, the address at the former being delivered by Bishop Gwynne and at the latter by Archdeacon Swann. In Alexandria a service was held at Hadra in the British Military Cemetery, conducted by Padre Simons, Chaplain at Mustapha Barracks, the Rev. J. F. Alderson, Chaplain at Alexandria and the Rev. Gibbon, Chaplain of the Scottish Church.

The Elections.

The closure of the list of candidates shows that there will have to be elections in 127 out of the 235 constituencies, as 105 candidates have been returned unopposed. Of these unopposed seats the Wafd holds 102, so that it needs to gain only another sixteen in order to have an absolute majority. That it will gain these seats and considerably more is a foregone conclusion. Indeed it is foreseen that, owing to the fact that many of the so-called Independents are in reality Wafdist, and, if returned, will declare themselves as such, the new Chamber will be for all practical purposes a Wafdist body. It is considered doubtful whether the other parties will secure more than ten seats between them.

Archæological Survey of Nubia.

It has been decided that the Archæological Survey of Nubia, which was carried out on the occasion of the first heightening of the Aswan Dam under the direction, first of Dr. George Reisner, and then of Mr. Cecil Firth, should be resumed in view of the further heightening of the Dam now about to be undertaken and the consequent submergence of the land and the destruction of the cemeteries between Wadi Seboua and the Sudan frontier. The work will on this occasion be under the direction of Mr. Walter Emery, who recently excavated at Armat on behalf of the Egyptian Exploration Society. He will be assisted by Mr. P. Korwan, and the staff will include three young Egyptians who have taken their Egyptological Diploma at the Egyptian University and are being attached to this expedition so that they may acquire experience in archæological field-work. Later an Egyptian anatomist and an Egyptian surveyor will be added. Mr. Firth left on Wednesday evening for Shellal, in order to

see that the organisation was complete, as the Expedition is to start forthwith.

Cairo a Consulate-General.

It is announced that Cairo is to be raised to the dignity of a Consulate-General, and that Mr. Lomas, the present Consul, has been promoted Consul-General, and is being transferred to Tunis. In the early days Cairo was, in fact, a Consulate-General, but that post was combined with that of British Agent and was held by Lord Cromer, Sir Eldon Gorst and Lord Kitchener. It disappeared on the declaration of War when the British representative became a High Commissioner. Cairo is, therefore, only reverting to what it was before the War.

On the occasion of the departure of Mr. Lomas a house-dinner was given to him at the Turf Club this week, the Chair being taken by Sir Percy Loraine. Over eighty friends foregathered to bid him good luck and give expression to the esteem which the community feels for Mr. Lomas and their regret at his leaving them. His health was proposed by the High Commissioner and seconded by Bishop Gwynne in felicitous terms, the references to the part he has played in the development of the community and to the work he had done, not always in the lime-light, in the interests of its members, being received with warm applause. Mr. Lomas will be succeeded by Mr. Rabino, who was Consul here before him and has since received promotion to Consul-General. The community cherishes very pleasant recollections of Mr. Rabino's former sojourn in its midst, particularly of the able manner in which he reorganised the affairs of the Consulate.

The New British Boys' School.

Considerable progress has been made with the work of building the new Boys' School in Alexandria. The levelling is almost complete, and building above-ground is about to start. The contractor is already a fortnight ahead of his time, so that there should no doubt about the premises being ready by the autumn term of 1930. Meanwhile, the School is continuing in the hired premises in which it was started last autumn in the Rue des Pharaons. I paid a visit to it the other day and was agreeably surprised to see how well things were going. There are now over 160 boys in attendance—those who wondered whether the estimate of 50 for the first term would be realised cannot now have any doubts as to the want the school fills—and this number would have been much greater if the accommodation had not been restricted. A school library has been started, which is already very popular and any contribution in the form of novels, magazines and standard works, fit for boys between the ages of 7 and 17, particularly books which show how our Empire was built up and what it stands for, will be gratefully welcomed by the Headmaster, Mr. H. R. Thompson, who deserves the warmest congratulation for having overcome the many unavoidable difficulties and assured the success of this venture from the start.

Belgrade, November 14.

***Troubled Waters.**

The Italian campaign against Yugoslavia, begun by Press attacks and the severe note of protest sent after the anti-Italian demonstrations in Zagreb which followed the shooting of the young Croat, Gorton, at Pola, has been steadily continued ever since. It is claimed here that there can be little doubt that the note addressed by the Albanian to the Yugoslav Government, relating to the murder of an old Franciscan priest, Guetchov, near Prizren, was inspired by the Italians. The Albanian Minister had visited the Italian Minister a few days before, the Italian Minister had mentioned to friends that he was busy investigating cases of murder of Albanians on Yugoslav territory, a long time elapsed between the murder, which was fully reported, as a case of Albanian revenge, in the Belgrade Press, and the protest, and the Albanian Minister declared that his Government demanded satisfaction and would go "*jusqu'au bout*" to get it—strong words for a tiny Power to use. But inquiry proved the priest to be a Yugoslav citizen, and the murderers to have been Albanians, probably acting on political motives, since Father Guetchov was a well-known opponent of King Zogu's régime; so the matter was allowed quietly to drop.

Brigands and Brawls.

While the majority of Bulgarian newspapers admit that Ouzounoff is an ordinary bandit and blame the Government for failing to bring him and his gang to justice, a certain section of the Press, always believed in Yugoslavia to be financed by Italy, has tried to attribute the blame for his misdeeds to Yugoslavia. Although it is admitted that no single member of the gang has been caught, they give exact details of the arms and munitions which they allege were supplied to each member of the gang by the Yugo-

* Speaking in the Albanian Parliament on the assassination of Stefen Guetchov, Raoul Beg Fitzo, Minister of Foreign Affairs, stated that Guetchov was an Albanian subject, born in 1874, who had lately become a priest in the village of Zumbi in the district of Prizren. "On October 13," he continued, "two gendarmes of the Zumbi village presented themselves at the house of Father Stefen Guetchov and notified him that, according to orders received from the Prefecture, he was summoned to appear in the town of Prizren before the Prefect. Father Guetchov, knowing that nothing of an official character exists between him and the Prefect, began to doubt the reality of the call. But on the insistence of the gendarmes he was obliged to start for Prizren, taking with him, as associates, an employee at the Town Hall and the guardian of the village school. On his arrival at Prizren he went straight to the Bishop Guidovitz and informed him about the summons. After a short stay with him, he presented himself to the Prefect who, being surprised of his presence, assured the priest that he knew nothing about the summons, which must have been a mistake. Leaving the prefecture, Guetchov again saw Bishop Guidovitz and proceeded to return to Zumbi with his companions. After they had crossed the Drin, on the Prizren-Jakovitz road, two men, heavily armed, came out of a hut and fired at the priest, who fell shot through the right eye. The criminals then approached him and, cursing him in the Serbian language, fired again and again at his motionless body. As soon as they finished the crime, they took their flight towards the village of Jonay. It ought to be mentioned that hundreds of workers, working on the road Prizren-Jakovitz, have been witnesses of the circumstances in which the murder was committed. The companions of the priest were not molested."

"With regard to this incident our Royal Legation in Belgrade notified us that the Yugoslav Minister of Foreign Affairs, in reply to the note of our Legation, declared in a friendly tone that orders have been given for a judicial investigation into the crime and the result will be communicated; also the Minister of Foreign Affairs has declared personally to our Minister in Belgrade that strict orders have been given to unravel the mystery of this crime. So, it is necessary to wait with assurance that the assassins will be punished and let us not be alarmed so much."

slav Government. But, as most of the crimes were committed some 200 kilometres from the Yugoslav frontier, and, despite their serious nature (the murder of several judges and the holding up of a whole train), the police and soldiers have failed to track the gang, it would seem probable that they have considerable support from the peasants, who probably consider that they are working on their behalf against the Government.

There is evidence that the Italian Legation in Belgrade has been looking for an opportunity to make protests against the treatment of its members, who have been unnecessarily exposed to insult and injury to this end. For a long time no cause could be found, but a few days ago Colonel Casson, the Italian Air Attaché in Belgrade, provided such an incident. When sitting in a cabaret bar about three o'clock in the morning, he annoyed some Serbians sitting near by making eyes at a girl who was with them. When they moved to a place out of his sight, a companion sitting with him made rude remarks about Belgrade so loudly that they were overheard by one of the group who was dancing. The dancer, a young man of excellent repute in the sporting and business world, asked whether the remarks were addressed to him. Getting no reply but derisive laughter, he said: "If they were, I can only tell you that it is not Belgrade but Rome which is filthy." The Italian Colonel immediately jumped to his feet and struck him in the face, but the young Serb, being an excellent boxer, replied with a blow in the eye which felled the Colonel. Getting up, he walked out and went to complain to his Minister, who in turn complained to the Minister of Foreign Affairs, and demanded the punishment of the offenders. So keen is the present Yugoslav Government to be on good terms with Italy, that they immediately punished severely the Serbs involved, even those who were merely sitting near, and they closed the cabaret where the incident took place for three days. The Italian officer who began the whole trouble has not been punished.

A Rapallo Echo.

On November 12, the ninth anniversary of the signing of the Rapallo Treaty, students of the Belgrade University held a meeting in the Great Hall, at which a number of speeches were made against this Treaty, and especially against the clauses which give half a million Slavs in Istria to Italy, who, it is contended, is ill-treating them. Strong police guards were immediately placed all round the building to prevent any possible demonstrations from being made in the streets, and the meeting ended peacefully and without untoward incident.

Administrative Reform.

On November 11 the Bans, who are to govern the nine provinces into which Yugoslavia is now divided, took over from the old Veliki Zhupani and other officials of the local autonomous bodies, and began their task of reconstructing the administration of the country. Various Acts passed since October 3 have defined the power of the Bans more accurately, and it seems from these that the *Banovine* (Banats) will have a very considerable degree of autonomy, especially in administrative matters.

THE HIJAZ.

Jidda, November 10.

France's Legation at Jidda.

After some months of silence I resume my letters to report the materialisation of a development envisaged in my correspondence as far back as May. The French Government has now decided forthwith to raise the status of its Consulate at Jidda to that of a Legation; and M. Maigret, who came here in April as Consul for the time being, has been appointed *Chargé d'Affaires* pending his formal appointment as Minister. He will shortly present his Letters of Credence to H.H. the Amir Faisal, who will receive him on behalf of his father on the occasion of his

forthcoming visit to Jidda. Thus France gets the honour of being the first Power to recognise the diplomatic needs of the changed situation in Arabia; and it is to be hoped that the British Government will soon take a similar step, which has now been under consideration for some months since the visit of Shaikh Hafidh Wahba to London during the past summer.

In Eastern Najd.

Shaikh Hafidh Wahba, after a visit to Egypt and a short sojourn in the Hijaz, has now again left Jidda—this time for Kuwait in connexion with family affairs. He will doubtless, however, have an opportunity of making contact with the King, who is shortly proceeding to the Hasa to press the punitive measures hitherto conducted by his son, Saoud, against the scattered remnants of the little group of malcontents which Faisal al Duwish had gathered round him to defy his sovereign on the issue of war or peace with Iraq. His son, Abdul Aziz, was recently killed at the wells of Umm Radhma, and the whole of his following of 700 men was wiped out except two men who managed to escape. Faisal himself has been reported dead on many occasions, but he is in fact alive and living the life of a hunted fugitive; and while he is alive the King is wisely prepared to take no undue risks. There seems little reason to doubt that soon or later Faisal will be caught or killed. Abdullah ibn Jiluwi, Governor of the Hasa, has of late been seriously ill, mainly owing to grief for the recent death in action with the Ajman of his eldest son Fahad; but I understand that he is now recovered and has resumed work at the head of his province, which has been administered latterly by the King's son, Saoud.

Accession Day.

It has been decided that in future January 8 shall be observed and celebrated as the official Accession Day of H.M. the King, who on that date in 1926 was acclaimed

as King of the Hijaz at Mecca. His fourth anniversary will be celebrated with processions at Mecca and a great banquet at Jidda, at which the Amir Faisal will preside. It is noteworthy that a fixed date of the solar year has been deliberately selected in preference to a moving lunar date; in consequence the occasion will be treated as a purely secular festival, the only one of its kind in the Arabian calendar.

General News.

The first pilgrims (as usual, from Java) are due to arrive here in about a week, and the prospects for the coming season seem rather above the average. There should be something over 100,000 visitors from overseas, and it looks as if Egypt will this year make a special effort to increase the number of its pilgrims. The Misr Bank group has apparently secured the contract for the transportation of them to the Hijaz, and is contemplating the construction of a number of ships specially designed for the pilgrim traffic. It is reported that these ships will enter into competition with the Khedivial and Italian lines by offering lower passenger and freight rates. That is all to the good, and, indeed, a long-overdue reform.

The first rains have not yet arrived, though a few days ago there were promising signs of a break in the weather. The promise was not, however, fulfilled and the cistern-stored water of last year is nearly exhausted. The two condensers are in consequence kept busy.

A new Vice-Consul, Mr. Wikeley, from Alexandria, has arrived to complete the staff of the British Agency and Consulate; and we have to record the arrival of a new Italian Consul, Commendatore Sollazzo, in the place of Commendatore Teodorani. The Turkish representative, Abdul Ghani Bey Sani, is at present absent, having gone some months ago to Beyrout for an operation; and the Dutch Consul is expected back very shortly.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 7.

The Viceregal Pronouncement.

A student of Indian politics, and especially one who has to write of them, will not have found much time this week to read anything else. I did pick up something else a day or two ago, and there my eye fell upon these words: "En politique il faut être sobre de protestations, parce que nul ne sait, comme dit le proverbe, de quelle source la soif ou la disette peuvent nous amener à boire les eaux." If one is to judge whether or no the Viceroy transgressed that rule in his pronouncement of October 31, one must go back and consider what precisely the situation was. If the rule was transgressed, there will be the bill to pay. In going back, then, to consider what the situation was, and how it should have been met, one will not be merely displaying ancient history. If there is a bill to pay, it cannot make it more onerous, and may make it lighter, to know better what it is.

The Situation.

The situation was that there was a government established in India under which the more advanced Indians felt that they could not live without a loss of self-respect. There was to be a revision, after an inquiry according to the provisions of a statute. A Conservative Government was in power in Great Britain. From no Conservative Government do the Indians expect much; for they know that by temperament the Conservatives are Imperialists. That Conservative Government appointed a commission to make the inquiry. India would have been ready to say that not much in any case was to be expected from a commission appointed by a Conservative Government. When it was announced that no Indian was to be asked to serve on the commission, an easy excuse was given the more determined elements in Indian politics to refuse to have anything to do with it. So the inquiry that has been held has been one, the face value of which, to put it so, has been greatly diminished. Large numbers of influential men do not seek to baulk and thwart a parliamentary commission without a considerable heightening of the political temperature. It is when a country's temperature is high, that the wilder spirits turn revolutionary. No Government is tranquil in the face even of only the forerunnings of a revolution. So the heads of the Government will be impelled to seek as large a remedy for things as men dare venture. The Viceroy and his Council in India, one may assume, were even more ready than the new British Government for change in India. What was the new British Government ready for?

The Impediments.

The new British Government cannot have been ready, as a whole, for more than the Cabinet could count on the other parties being persuaded to support. The fact might be forgotten that the Prime Minister, when Leader of the Opposition, accepted his full share of responsibility for the Statutory Commission's being constituted as it was. That might be allowed to be forgotten, but the fact could not be forgotten that the Conservatives and Liberals would stand fast by the Commission. Now the Indian boycott of the Commission was to extend to its Report. India was to refuse to discuss any proposals for changes in the constitution based on that Report. Nothing could be done, then, until such a change had been brought over things, as to make India ready to discuss. So the idea gained ground that there should be a Round Table Conference.

The Round Table Conference.

What made a Round Table Conference the only way of proceeding was that it was the only way out of the *impasse* created by India's refusal to discuss. One is impelled to think by what has followed the Viceregal pronouncement that it would have been better politics,

as more intelligent and showing more strength of character, had the British Government frankly said so; had it said: "We made a mistake; the inquiry is incomplete; the Prime Minister will therefore issue invitations to a Round Table Conference, to complete it, as soon as the Commission's Report is in his hands." It would have been better politics to say that, leaving it to the Indian leaders to refuse, if they dared. The British Government, as you know, have shirked saying that. They have "put up" Sir John Simon to say that there must be a conference between the British Government and the Ruling Princes. It is not true that there must be that *now*. A year or two hence would have been ample time. But to say that it must be now was to let in the chance of suggesting a conference with the Indian leaders of the recalcitrant parties under cover of it. It has all been a game of *finesse*, the poorer thing always in politics.

The Word Too Much.

There was no need to say more than that the British Government desired there to be a Round Table Conference, unless it had been said that it would be summoned at the earliest possible moment, and that ample time would be given for the examination of the whole question, including time for adjournment, should time be needed by any party to the conference for preparation of a case. There was no need to say a word about the Declaration of 1917; about what was implicit in it; about Dominion Status. That was a word to keep for Parliament at a later date; at any date at which the Conservatives and Liberals threatened to combine against the Government's proposals. They could then have brought forward the passage in the Viceroy's Instrument of Instructions from the King-Emperor. It is apparently not in contemplation to summon the Round Table Conference at the earliest possible date. That is a mistake. Indian opinion is already fastening upon that. It is apparently contemplated to hold separate conferences with the Ruling Princes. That is another mistake, and Indian opinion will soon be fastening upon it. One is forced to the conclusion that there are not nearly brains enough behind the British case as it has been presented.

Unlimited Hopes.

To say so much about Dominion Status as the Viceroy did say, was to rouse hopes in the people of India (not so much, I believe, in the leaders) which the Government will have to disappoint. Already, on the morrow of the pronouncement, one had the leaders in Delhi putting this forward as a condition of their acceptance of the invitation to the Round Table Conference: "Some doubt has been expressed about the interpretation of a paragraph in the statement of the Viceroy made on behalf of His Majesty's Government regarding Dominion Status. We understand, however, that the conference is to meet not to discuss when Dominion Status is to be established but to frame a scheme of Dominion constitution for India." One will have the Indian leaders putting such as that forward, though a more emphatic portion of the statement made on behalf of His Majesty's Government was this: "Sir John Simon's Commission . . . is now at work on its report, and until that report is laid before Parliament, it is impossible, and even if it were possible, it would, in the view of His Majesty's Government, clearly be improper, to forecast the nature of any constitutional changes that may subsequently be proposed." What the Indian leaders, in their reply, sought to do, in the passage that I have quoted, was to determine now the fundamentals of those constitutional changes. That cannot be allowed.

The People's Hopes.

The people's hopes are bound, I say, to be disappointed; the leaders' not so, I think. The leaders, of course, in their game of *finesse*, will play any card they think good, such as try now to get the British Government to commit itself beforehand to a Dominion constitution for India; but they know that the British Government knows that there

are far too many British lives entrusted to India, and far too much British capital sunk in India, for Great Britain to want to see the whole government of India handed over immediately to a lot of untried men. They know that. They may not know as some others do, I think they do not know, that there is not and never will be, among those born of people settled in India for many generations, enough of the stuff that good government and peace within India, and keeping her frontiers and shores free of invaders, would need.

The Indian Born.

For how many long centuries now has India been governed by recent immigrants from countries that breed more stalwart men. The Indian born of families settled for many generations in the country is a man of lowered vitality, which shows itself in character, no less than in intelligence. That is what constitutes the insuperable difficulty in the way of making India a Dominion as free within her borders as the other Dominions of the British Commonwealth. Mrs. Besant has been orating. My newspaper reports her as having said: "If you would know what India can do, you must know what India has done in the past; she has the most glorious history, the most wonderful history, the most precious history in the whole world." She says, however, no word of this, that most of the men who made that history were in a very real sense non-Indian. Among the men who signed the leaders' reply of last Saturday were three men at least who think of themselves in their hearts more as Arabs than as Indians; men in whose families there has been a deep sense of the value of keeping their foreign blood pure. But it is well known how many of India's great rulers have been immigrants, or men who could count back a generation or two or three to immigrant stock.

GOVERNOR-GENERAL'S EXECUTIVE COUNCIL.

The India Office announces that the King has approved the extension of the tenure of office as Member of the Governor-General's Executive Council of Khan Bahadur Sir Muhammad Habibullah Sahib Bahadur, K.C.S.I., K.C.I.E., to March 31, 1930, and in the vacancy caused by his retirement to appoint Khan Bahadur Mian Sir Fazl-i-Husain, K.C.I.E., to succeed him.

The King has also approved the extension of the tenure of office as Member of the Governor-General's Executive Council of Sir Bhupendra Nath Mitra, K.C.S.I., K.C.I.E., C.B.E., to April 29, 1930, and the appointment of Mr. Joseph William Bhore, C.I.E., C.B.E., Indian Civil Service, to succeed him.

Both the new appointments are likely to command general approval in India. A very capable administrator and a keen student of educational problems, Sir Fazl-i-Husain, whose selection is likely to give particular pleasure to the Muslim community, for the last three years has been Revenue Member of the Executive Council of the Governor of the Punjab. Mr. J. W. Bhore, who is a Mahratta Christian from the Bombay Presidency but a Madras Civilian, is almost as well known in this country as in India, for when the office of High Commissioner for India was created in 1920 he was chosen to be secretary to Sir Dadiba Dalal and has on several occasions officiated in the senior post. On his return to India Mr. Bhore became Secretary to the Government of India in the Department of Education, Health and Lands and for the past two years he has been Joint Secretary of the Statutory Commission.

Lord Peel, former Secretary of State for India, arrived on November 22 in Bombay from England. To a representative of the Press he stated that he was visiting India with a view to studying the political situation. He will remain for two months, during which period he will visit Burma.

The appointment of Mr. Robert Stonehouse Broomfield to be one of the Judges of the High Court of Judicature at Bombay in the place of Sir Charles Gordon Fawcett, who has resigned, is gazetted.

MAHATMA GANDHI AND TOLSTOY.*

A book which purports to set out the life and explain the ideas of Gandhi must be of interest to the many who find difficulty in grasping what these ideas are, and in understanding their effect on the people of India. Gandhi has always been an admirer of Tolstoy and in many ways recalls his life and influence. The resemblance does not of course lie in such unpleasant personal traits as are depicted in Countess Tolstoy's recently published diaries, but it is to be seen in the common idea of self abnegation, and in the confusion of teaching which is common to both leaders. Tolstoy was a great writer and thus attained an influence outside his own country to which Gandhi could make no claim. On the other hand, Gandhi exercised, under the sway of a "Satanic" Government, an amount of political influence which was impossible to Tolstoy under a more brutal régime.

It is hardly necessary to emphasise the inconsistencies of Gandhi's teaching. To take a few obvious instances, he is a firm believer in what he calls "caste fixity": he says that the prohibition of inter-marriage and inter-dining between castes is essential for a rapid evolution of the soul: and yet he is a strong opponent of "untouchability," which can hardly be affected, except in name, so long as the superior castes hold their old position. Similarly he denounces child marriages, and yet does not recognise that so long as marriage is regarded as a religious obligation, and is allowed only within the caste, the restriction of choice makes early marriage almost a necessity. It is, however, in respect of Passive Resistance or Non-Co-operation that his inconsistencies become most marked and dangerous. Mr. Andrews regards this as a singular weapon which Gandhi first forged. But, apart from the fact that it is well known in the history of many religious sects in Europe, Passive Resistance is a mere extension of the old Hindu custom of "dharna." Gandhi's only creative share in it was that he applied the practice to politics on a large scale. He was able to do so, partly it must be admitted, by his own personality and the popular confidence in his saintliness, but still more by the growth of humanitarianism, and the power of agitation through the Press, which renders Government far weaker than they were in sterner days. Non-co-operation with Government is open to two obvious dangers. It can be applied, by the order of an irresponsible though influential leader, on entirely inadequate public grounds. A good instance is given in this book, when Gandhi started Passive Resistance because of the existence of a customs boundary between Kathiawar, his original home, and Guzerat, his place of residence. Doubtless the customs examination was, like customs elsewhere, a nuisance, but the danger of dealing with a nuisance extra-legally is obvious. The second, and chief, objection to Non-Co-operation is that it is bound to lead to violence. This was proved repeatedly, and the fact that Gandhi was genuinely shocked on each occasion, called off the Non-Co-operation, and underwent a fast, hardly undid the damage. Nor did it prevent Gandhi from starting Non-Co-operation again on the next occasion.

Mr. Andrews, who has long associated himself with the forces that desire to eliminate British influence in India, must not be regarded as an altogether safe guide to the history of agitation in India. It is hardly correct to say that Gandhi's revolt against the system of Government in India began only in 1920. Before that he doubtless satisfied himself that his opposition was to the practice, and not to the theory of Government, but the distinction is too fine for common minds. It is, however, true that he attempted to obtain recruits for the Army in 1918, a step of which Mr. Andrews, it may be noted, strongly disapproved. It should be added, though Mr. Andrews does not do so, that Gandhi's efforts in recruitment were, through no fault of his own, entirely unsuccessful. Just as there were no Guzerathis in the old "Swadeshi" army

* "Mahatma Gandhi's Ideas." By C. F. Andrews. (London: Allen and Unwin. 12s. 6d.)

of the Sultans of Guzerat, so no modern fighting force could be raised in the Province: a fact which alone rather impairs the Swadeshi ideal of Gandhi, whereby not merely every Province but every village should be self-supporting.

Readers of this book will, we think, be somewhat puzzled to find the secret of Gandhi's undoubtedly widespread influence. That lies, we believe, in two factors: partly in an admitted though indefinable personality, but chiefly in the respect which in India still attaches to a prominent man who prays and fasts. But this does not prevent Gandhi's ideas and actions from being as illogical as ever Tolstoy's were: and, it may be added, as embarrassing to his Nationalist friends as to any Satanic Government.

THE BURMA RICE TRADE.

The prevailing depression in the Burma rice trade is attracting considerable attention; and, as readers of *THE NEAR EAST AND INDIA* are aware, for some time past the question has been under investigation by a Committee appointed by the Provincial Government at the instance of the Legislative Council. The position is serious and no immediate remedy would seem to be in sight. The trouble is due very largely to a great extension of cultivation and production in certain of the rice-growing countries other than India. Even as recently as 1925 the Indian Taxation Inquiry Committee stated, quite correctly, in their report that: "the only countries which export appreciable quantities of rice are India, Siam and Indo-China." This statement is very wide of the mark to-day. Before the War Italy, Spain, Egypt, and the United States produced not much more rice than was needed for their own consumption. In 1914 their output was only about 600,000 tons. In 1928 it was over two million tons.

In the light of these figures it is not difficult to understand why the demand from Europe for Burma rice has diminished. Before the War Burma had almost a monopoly of the European rice trade. This advantage she has now lost; and it is clear that she can only recover her former commanding position by economic competition. It is satisfactory to see that the position is frankly recognised by the trade and the Burma Chamber of Commerce is perfectly right in contending, in a memorandum which it has submitted to the Inquiry Committee, that all possible steps must be taken to meet the situation, as otherwise the position of Burma in the consuming markets will go from bad to worse.

It is particularly unfortunate that an expansion of rice cultivation in the western countries should have coincided, as it has done, with an increase of production in the East. French Indo-China and Siam are both producing more, and although the superiority of the Burma grain remains beyond dispute, are at the same time steadily improving qualities. Between them they now export no less than 2½ million tons yearly. Indo-China competes severely with Burma in Cuba, which is an important consuming market; and even in India last year Indo-China rice came into direct competition with the Burma grain. The Burma Chamber has also emphasised another difficulty, arising out of the relative prices of wheat and rice, to which reference was made recently in this journal. Wheat is at its pre-War price in the East, while rice is much above the pre-War level. According to the Burma Chamber the result of this is that wheat has become a serious competitor as a food in countries where rice was formerly supreme. There has certainly been a big reduction in the exports of Burma rice to both China and Japan. And the increasing importation of wheat by both these countries is said to be entirely at the expense of rice.

The most encouraging feature is that it is quite clearly understood by the Burma Chamber and the trade generally that Burma must fight her competitors on their own ground. Her cheaper cost of production is her principal weapon, and this must be used to the utmost. This

being so, the question to be answered will be how, without injuring the cultivators, it will be possible to reduce prices. The Chamber's answer is that the right policy will be to improve agricultural methods and cultivation so as to obtain a larger yield per acre; to improve quality so as to enable Burma rice to compete in the higher priced classes; and to ship pure grain and not admixtures. The Indian export duty should be, the Chamber suggests, either withdrawn entirely, or converted into a cess, the proceeds of which would help to meet the cost of introducing the proposed improved agricultural methods.

It certainly seems to be an anomaly to continue to impose an export tax on a commodity which is situated as Burma rice is situated to-day. The export cess has become a popular method of providing for the cost of industrial development in India; and it might prove to be useful in respect of rice. The Indian provinces other than Burma are not greatly affected as their exportable surplus is restricted. Of the 1½ million tons of rice exported from British India in 1928 no less than 1½ millions came from Burma. And in 1925, when the total was nearly 2½ millions, Burma was responsible for close upon 2,200,000 tons. In view of the active support which the rice trade in America, Spain and Italy receives from the respective Governments, the case for either the removal of the duty or the application of the proceeds for the benefit of the Burma industry is a strong one.

THE VICEROY'S DECLARATION.

Reception in India.

It is difficult to exaggerate the warmth of the welcome accorded to the Viceroy's statement, published in the *Gazette of India Extraordinary* on November 1, by the leaders of all political parties except the most extreme section. The lead given by Sir Tej Bahadur Sapru, a prominent member of the All-Parties Conference, has been widely followed. Sir C. P. Ramaswamy Aiyar describes the statement as an act of great statesmanship which constitutes a bridge over the gulf that has been dividing Great Britain from political India. "It has not only cleared the air," he adds, "and dissipated suspicion, but it goes far to bring about harmony of purpose and outlook in England and India." No less emphatic in his insistence upon the necessity for an immediate and favourable response on the part of Indian leaders is Moulvi Muhammad Yakub, Deputy President of the Legislative Assembly, who pays an especial tribute to Lord Irwin for his part in the creation of the new atmosphere of amity and good will. After appealing to leaders of every shade of political opinion to avail themselves of the new procedure as the means of achieving an honourable settlement, he voices the general hope of the community that the special Muslim interests will be adequately represented at the Conference.

The attitude of other Liberal leaders is also well brought out in the joint statement issued by Sir Muhammad Shafi, Sir Muhammad Iqbal, Shah Niwaz and six other prominent Muslims in the Punjab, which expresses their unanimous and sincere conviction that the action proposed by the Viceroy's announcement provides the most satisfactory solution of the Indian political problem. The clear and unequivocal declaration made by H.M. Government that the grant of Dominion status to India is the underlying purpose of British policy must inspire all sincere well-wishers of India's constitutional progress. Provided that Hindu-Muslim differences were equitably adjusted before India's representatives proceeded to India, and provided that the leaders selected to participate in the discussions were real representatives of the various communities, the signatories of the statement are confident that the Conference will succeed in achieving the desired end.

SOME TRIBES OF THE SOUTHERN SUDAN—III.*

(From a Correspondent.)

Round the Bari on either side of the river there are other tribes who speak dialects more or less closely resembling Bari. On the east bank are the Shir, the Lokoia, and the Lotuka. The Lokoia are not plainsmen like the Bari; they have fewer cattle, and often live in well-protected homesteads built on a terraced hill. Their organisation is probably very much like that of the Bari, but it may be better preserved in such particulars as age-classes, and organisation for fighting, hunting, dancing, and mutual help.

On the west bank are the Mandari, a people who are not at all unlike the Dinka in appearance, and the Nyang-

A "GUGU," OR GRAIN STORE.

wara, a tribe that provides many of the Government police. Further inland on the west are the Fajelu and Kakwa. These tribes are well out of the Nile Valley with its cattle pastures and long-legged Hamitic Bari. The country is a close woodland no longer suitable for cattle, though here and there are a few herds of stunted animals. The people, generally speaking, are shorter and more thick set; their faces are rounder and their colour lighter. They are cultivators and not herdsmen. The country round Yei, inhabited by a mixed population of Kakwa, Makaraka, Kaliko and Mondus is and always has been rich in durra, and in the old days a "razzia" or marauding expedition in to Makaraka, as it was then called, generally filled the granaries of the Khartoumers on the Nile.

The staple crops of these people are red and white durra, maize, groundnuts, simsim, and telabun. The men do the heavy work, hoeing off the grass, and turning over the soil before sowing; the women the lighter work of weeding as the crop grows; and the little boys have the tedious task of scaring the flocks of persistent durra birds as it ripens. After harvest the crop must be stored, and to this vital business the native has given all his ingenuity and centuries of practice. The result is the ubiquitous *gugu*, and it is hard to improve upon. It is a cylinder of plaited canes, plastered with mud and cow-dung, mounted on a stand of wooden legs, or in some districts of upright stones, and covered by a moveable grass-thatched roof. Thus the durra is protected from the white ants below and from the rains above. Each married woman has her complement of *gugu*, for herself and her children; they are her own property, and when they are full a man may not take their roofs off or look into them.

The native is almost wholly a vegetarian, and to this diet he apparently owes his remarkable tolerance of abdominal wounds. An old man of eighty may tumble on to the dirty blade of his spear and give himself a nasty

wound in the stomach and yet be about again in a few weeks, when his European contemporary would be in his grave.

The agricultural habits of these tribes and a fair annual rainfall make commercial crops a possibility. The Kuku country, a high open plateau on the west of the Nile, and the Acholi country on the east seem particularly favourable spots. Until now the Kuku have lived in isolation owing to the regulations of the sleeping-sickness authorities; but the country is developing now, and the natives find a market for their surplus telabun and also for cotton.

The increase of intercourse among all these tribes, and between them the outside world raises interesting questions of language. Up to the present Arabic has been their *lingua franca*. It has come down the one main highway into the country, the Nile, brought by sailors, soldiers and traders. It was the language of administration in the old days, and still is so. Nearly everyone knows some Arabic, even the women and children, and, if two members of the same tribe can greet each other with Arabic salutations instead of in their own tongue, they are pleased to do so. That is to say, it carries a certain prestige in the eyes of the native. Some of its words have been permanently absorbed and moulded into native language, and all are so much modified as to make the Arabic of the Southern Sudan almost unintelligible to a northerner.

But it is not the only competitor as a common language. Bangala is wellknown to the west of the Nile. This is a mongrel language composed of a basis of some Congo tongue, Bangala, with an infusion of Suaheli, Arabic, French, and English. Like most mongrels it is said to have the virtues of vitality and adaptability. Some of its champions, and it has them, even claim that it has a delicate and growing grammar. But its great recommendation for most people is that a rough and ready facility in it can be acquired in a very short time. It was adopted by the Belgians during their occupation of the Lado Enclave, and was probably thus given a certain impetus as an official language. The natives sometimes call it Faransa or French.

On the other side of the Nile Suaheli is used to some extent as a means of communication. The Abyssinians

A SUDAN HOMESTEAD. ON THE LEFT IS A SMALL ENTRANCE FOR GOATS.

who come to poach elephants on the Nile have brought it with them, and for this reason it is sometimes called Abbasi by the natives.

These three languages bespeak the three influences from the north, the south-east, and the south-west to which Southern Sudanese have hitherto been exposed. They may be said, perhaps, to meet at Rejaf. There it is on the cards that a native addressed in any of these three languages would be able to answer in them, though the order of probability would be Arabic, Bangala, Suaheli. But now a fourth competitor is in the field. The pros-

* This is the concluding article of a series, the first of which appeared in THE NEAR EAST AND INDIA of September 19, and the second in that of November 7.

pects of English do not on the whole look bright; it is only spoken by a handful of people in the country and has not the pervasive influence of one already well rooted in the environment. But the native is a great linguist and would probably pick up a little English quite soon, if he found he needed it.

Meanwhile for the purposes of their own languages and dialects, they have now an approximately uniform script and many opportunities of learning to write it. When they have once learnt their script, which is naturally very much more phonetic than any European spelling, they can easily learn to record the words they hear either in their own language or another. The native has a good ear, and is used to what seem to us very delicate differences of tone, so that he knows what he is doing when it comes to his writing in his own language.

The major languages of the Southern Sudan certainly can never coalesce. Dinka and Bari, for instance, are probably not as close as are English and Dutch; but in each group one dialect may be expected to become the vehicle of literature, and in this way a common written language may possibly become evolved for each group. Those dialects which are too remote from the common standard will dwindle or only survive as the spoken dialect of a small community.

THE HOLY LAND IN WATER COLOUR.

No readers of THE NEAR EAST AND INDIA need be reminded of the excellence of the work of Mrs. P. A. F. Stephenson, who has now an Exhibition of water colours (called, a little inadequately, "Flowers and Stones of the Holy Land,") at the Alpine Club Gallery, Mill Street, Conduit Street, W.1. Mrs. Stephenson is not only a lover of Palestine, steeped in its beauty and lore; she is also a most accomplished and eager artist. We shall not recapitulate her technical merits, and will merely say that in this exhibition her skill seems to be put to even more various use than previously. Her flowers really call to one—and the heart leaps up, so beautiful are they; her "stones," as she calls the historical buildings of Palestine (and of Trans-Jordan, by the way) speak to one, so impregnated are they with the sanctity of ages and the significance of the present. Mrs. Stephenson, who had in former years seen much of Palestine, this year drank deeply and copiously of its refreshing waters; there is for her no staling of its time-soaked splendours or perennial marvels.

Most of the works on view (Closing Day, incidentally, is on December 3) were painted this year, though it is interesting to notice a replica or two of pictures in previous exhibitions by this gifted artist. Perhaps her main virtue is still most evident in the representation, on the one hand, of age-old historical buildings—the Greek Convent at Bethany, the Wall of Wailing, the Great Street at Jerash, the Dome of the Rock, and so on, buildings which are not dead but living—and, on the other hand, of the ever-springing, joyful flowers. But for these flowers, Mrs. Stephenson is little concerned with the new: Palestine is to her, it seems, always the Holy Land, on which the modern may like as not strike a jarring note. In this view there is nothing sentimental, but mainly an evidence of constant reverence of the past and belief in its virtue to inform the present. Her Exhibition is, in short, the story of a search for and the finding of—beauty, whether man-made or natural. How successful she has been her busy brush here abundantly shows, and if there are any of our readers who have not yet seen these pictures, we advise them not to let next Tuesday pass without experiencing what is in fact a visit, or a revisit, to that incomparable land sacred to Christian, Muslim, and Jew.

It has been decided to appoint Ali Jowdat Beg, Mutasarif of Basrah Liwa, as a Director-General of the Ministry of Interior, which is a newly created office, and to appoint Nashat Beg Sinawi, Amin-ul-Asima (Mayor) of Baghdad, Mutasarif of Basrah.

THE ATTORNEY GENERAL OF PALESTINE.

An attempt was made in Jerusalem on November 24 to assassinate Mr. Norman Bentwich, Attorney General of the Government of Palestine. An Arab youth was arrested. Mr. Bentwich, who was wounded in the leg, is expected, fortunately, to make a complete recovery. Before the Commission of Inquiry on November 25, Mr. Stoker, Counsel for the Arabs, Mr. Preedy, Counsel for the Government, and Sir Boyd Merriman, Counsel for the Zionists, expressed their horror of the crime and sympathy with the victim. The Chairman, Sir Walter Shaw, then said, in words which we cordially endorse:—"Such acts cannot benefit the party to which the assailant belongs, and can only tend to prejudice its case in the eyes of the world." Sir Walter Shaw considered that the crime could only have been committed by a foolish and irresponsible person, and not as the result of any instigation.

THE BASRAH LIWA.

We learn from the *Times of Mesopotamia* that the Basrah Government administration has been reorganised and the following changes have been made:—

- (1) Abolition of the office of Qayimmaqamiyat, Abul Khasib.
- (2) Abolition of the office of Mudiriyyat of Fao.
- (3) Creation of two Qayimmaqamiyats, one for the Shatt-al-Arab Qayimmaqamiyat and one for the Sila Qayimmaqamiyat.
- (4) Creation of a Nahiyat in Abul Khasib.
- (5) Attachment of Zubair, Hartha and Abul-Khasib Nahiyats to the Shatt-al-Arab Qayimmaqamiyat.

In view of these changes the Basrah Mutasarrifiyat has rented the house of Abdul Latif Pasha El-Mandil, previously the Basrah Club, to be the Sarra of the Mutasarriif, and the Qayimmaqam of Shatt-al-Arab will occupy the present Sarra.

THE NEW IRAQI CABINET.

A new Cabinet has been installed at Baghdad, consequent upon the death of the Prime Minister, Sir Abdul Muhsin Beg as Saadun. Naji Beg as Suwaidi, who was Minister of Interior, becomes Prime Minister and takes the portfolio of Foreign Affairs, and the other offices are filled as follows:—

Naji Pasha Shawkat	...	Interior.
Yasin Pasha al Hashimi	...	Finance.
General Aziz Beg Qassab	...	Justice.
General Nouri Pasha as Said	...	Defence.
Haji Abdul Husain al Chalabi	...	Education.
Amin Beg Zaki	...	Communications and Works.
Khalid Beg Sulaiman	...	Irrigation and Agriculture.

NEWS IN BRIEF.

Dr. H. Frankfort, the Dutch archæologist and Egyptologist, has been invited to lead an expedition in Assyria and Babylon.

A monument to the late King Ferdinand of Roumania at Orashtie (Transylvania) was unveiled on November 18.

Mirza Mohamed Ali Khan Farzin has been appointed Foreign Minister and Mirza Hassan, Mushir Mushar-ul-Mulk, Finance Minister of Persia.

Six Roman sarcophagi, containing a number of gold coins and a ring of the time of Constantine the Great were found recently during excavations at Salonika.

A Royal decree last week announced that Mahmoud Pasha Samy, Egyptian Minister in Washington, and Sadek Pasha Hussein, Egyptian Minister in Rome, had been relieved of their posts.

Rival groups of the Bulgarian Liberal Party at Plovdiv came into collision on November 16, one person being killed and several injured.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

PERSONAL AND GENERAL

TO-DAY

November 28, 1929 (New Style).

November 15, 1929 (Old Style).

Jumada II. 25, 1348 A.H., of the Muslim Calendar.

Chesvan 25, 5690, of the Jewish Calendar.

Lord and Lady Stanley will leave London on December 12 for India.

The Hon. Mrs. Levy will leave 54, Lowndes Square immediately after Christmas for Port Said.

Sir Edwin Lutyens left 2, Weymouth Street on November 21 to join the P. and O. s.s. Mooltan for Port Said.

Lady (Stephen) Renshaw sailed on November 22 for Bombay, and will be away until March.

Major-General Sir Henry Bushman will sail for India about the beginning of January.

Lady Honor Guinness is leaving for a visit to India on December 5, and will return to England in the spring.

Mr. and Mrs. Roger Lumley are leaving for India on December 12, and will be away for three months.

Lady Capel Slaughter will join the P. and O. s.s. Ranpura on December 13 at Marseilles for India.

Shah Wali Khan, a younger brother of Nadir Shah, King of Afghanistan, has been appointed Afghan Minister in London.

Prince Lotfallah arrived in London at the beginning of this week from the Continent, and is staying at Claridge's Hotel.

Ex-King George, of Greece, returned to London on November 22 from Paris, where he had been making a brief stay at the Hotel Meurice.

M. Stancioff, formerly Bulgarian Minister to London, has arrived in London with Mme. and Mlle. Stancioff. They are staying at 9, Courtfield Gardens.

Professor D. S. Margoliouth will lecture to the Central Asian Society, on December 4, at 5 p.m., in the Royal Society's Hall, Burlington House, W.1, upon "The Ideals of Islam."

Mr. T. L. Jacks, Resident Director of the Anglo-Persian Oil Company in Teheran, arrived, with Mrs. Jacks, at Abadan, from Bombay, on October 30. After staying in Muhammarah he left for Teheran.

The Prince of Wales received at Buckingham Palace on November 20, on behalf of the King, Major B. J. O'Leary (upon his appointment as British Military Attaché, Constantinople).

Sir Francis Humphrys, the newly-appointed High Commissioner for Iraq, and Lady Humphrys left London on November 22 to take up his appointment. On his way to Baghdad he will visit Cairo, to meet Sir Percy Loraine (High Commissioner for Egypt), and Jerusalem, where he will see Sir John Chancellor (High Commissioner for Palestine).

The Prince of Wales received in audience at Buckingham Palace on November 19, on behalf of the King, His Excellency Mirza Seyed Hassan Taqizadeh (who presented the Letters of Recall of his predecessor, and his own Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Shah of Persia), and His Excellency Nagadras Makonnen Indalkatcho (who presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Court of Ethiopia).

Sir Leslie Orme Wilson, a former Governor of Bombay, will speak on "The Hospital for Tropical Diseases in London and its work for the Empire" at a meeting at Mrs. F. S. Franklin's house, 44, Lancaster Gate, W.2, to-day at 5 o'clock.

THE CYPRUS BROTHERHOOD.

Under the title of the New London Cyprus Brotherhood, the association of London Cypriots has been reorganised under the former President, Dr. A. Zeminides. The Brotherhood exists to keep Cyprus and its affairs before the British public by means of lectures and publications, to provide education in English for Cypriots, to promote the interests of Cypriots in London and to advise those who are thinking of coming to England. The Brotherhood, it is stated in its Constitution, will indulge in no political activities whatsoever.

The headquarters of the New London Cyprus Brotherhood is at the Pulteney Institute, Peter Street, Soho, W.1. There are already eighty registered members. The officers of the Brotherhood are: *President*, Dr. A. Zeminides; *Vice-President*, A. Marcoullides; *Hon. Treasurer*, Major W. H. Flinn (Trade Commissioner for Cyprus); *General Secretary*, K. Tigris; *Commissary*, J. Prountzos; *Librarian*, J. Kaniklides.

Four students were seriously injured, and 15 others slightly injured, in Sofia on November 18, when the police dispersed the demonstrations against the scheme for Bulgarian reparations elaborated by the Paris Committee.

THE WEEK AT HOME

London, Tuesday Morning.

Tories in Conference.

A mordant critic, "A. A. B.," tells us that the Tory Party is bereft of ideas, if indeed, its senses have not completely departed since 1906, and the Conservative Conference last week rather dismally failed to disprove his charge. True, it had the decency and common-sense to conserve Mr. Baldwin as its leader, but of any vital ideas, which might supplant the Labour Party as possessors of public confidence, it showed a sad lack—unless, indeed, enthusiasm for safeguarding can be considered a new sign. In effect, the Conservatives appear rather to be waiting for blunders on the part of the Socialists than relying on any conversion of the populace to their own point of view. And who wins battles on negatives these days?

One had rather thought that the new heaven in the Conservative Party, as shown, for instance, in the Liberalised Toryism of such young members as Mr. Boothby or Mr. Macmillan, would have been prominent at this Conference. But it was not to be: the stereotyped policy won all along the line. But wholesale opposition to the Government's Russian policy or to its fiscal policy will never of itself win a fight: there must be constructive ideas.

Perhaps, however, one ought to add that the policy laid down by the Conservatives does include a definite reference to the development of the Empire. For that fact they have largely to thank Lord Beaverbrook, but his policy is professedly a non-party policy. And obviously the development of Imperial resources cannot be claimed as a monopoly of any Party.

Ever Westward.

"Westward, lo! the land is bright" certainly seems to be the slogan of electrified London. Hotels, flats, restaurants, theatres, business houses—all are moving westward. The dazzling electric sign seems out of place except in the region or vicinity of the West End, and since that seems to be the criterion of progress—well, we all must move thither.

It is only with an effort that we can recall Oxford Street before Mr. Selfridge made it the spectacular thing that it is steadily becoming. The fact that it is now a shopping centre of its own is evident from the number of shops which move westward thither, Gamage's being the latest.

And now we learn that a block of buildings in Oxford

Street, between Portman Street and Old Quebec Street, has been bought with the idea of transforming the whole into residential flats. Thus the western end of Oxford Street will in a year or two have become completely transformed. But one does wonder, in connexion with this last project, for whom the flats are to be built. Only a few people can afford the enormous prices charged for West End flats, and I believe there are at this moment hundreds of expensive flats in the West End untenanted. Unless these new flats are designed for the bourgeois with incomes of something under a £1,000 a year, it is difficult to see how they can be made to pay.

However that may be, the amount of building in the West is prodigious. Only the other day a vast new Hotel was opened at Baker Street; new theatres seem to spring up weekly; at the corner of Great Cumberland Street a new hotel is being built, and the famous Horse Shoe Inn, where Tottenham Court Road meets Oxford Street, is to be rebuilt as a modern hotel.

Oxford and Cambridge.

At irregular intervals the controversy breaks out between the respective merits of Oxford and Cambridge. The only criterion used is, of course, the athletic one. It so happens that Oxford, partly owing to its fewer numbers than Cambridge, partly to other reasons, has had for the past decade or so a rather dismal record in games. It is, of course gratifying to see the right cause so often triumph, but one must in justice add a note of protest against the bosh that is now being written about the decadence of Oxford.

As everyone knows who knows anything at all (a surprisingly small percentage of our population), all Schools, Colleges, and Universities have lean years. Who before the War, for instance, could have dreamed of the emergence of St. Catharine's College into its present giddy limelight, when, through the genius of Wales, it is becoming famous? Oxford has been having such a lean time, but, as surely as the sun will set to-morrow over Madingley and Haslingfield, Oxford's glories will re-arise. A beginning may even be made next month, when, through the genius of South Africa, the Rugger Match may go to the Dark Blues. If so, Cambridge men will naturally deplore the break, but they will not begrudge Oxford their exit from an unusually prolonged darkness of defeat.

Modern Broadsheets.

I like very much the idea which Messrs. Faber and Faber, most enterprising young publishers, are putting into practice in the form of a kind of broadsheet. These little booklets, which cost a shilling each, belong to what is called the "Criterion Miscellany," and they appear to aim at conveying through the words of a single author, anything that at the moment may seem to be, so to speak, spiritually topical.

So far I have seen but four of them; A. W. When's "Two Masters," an unsatisfying, over-literary story of the War by a man who appears to have more depth than balance, H. M. Tomlinson's "Cote D'Or," a slight essay which is worth reading for the directness of its English alone, H. G. Wells' "Imperialism and the Open Conspiracy," in which the claims of the World State are politely pitted against the Imperialism of such men as Lords Melchett and Beaverbrook, and George Blake's "The Coasts of Normandy," a strangely inspired but very readable tale by the Editor of the *Strand Magazine*.

The conception of these publications has great possibilities, not only in the purely literary aspect, but also from the view of controversy upon the highest plane. It supplies a most refreshing means of clarifying intelligent opinion upon the capital issues of our time, and it will be very interesting to see how a generation which is accustomed to have its thoughts discussed in daily, weekly, or monthly publications takes to this new form of pamphleteering.

Book Reviews

'THE INDIAN PEASANT UNDER MUSLIM RULE.

"*THE AGRARIAN SYSTEM OF MUSLIM INDIA.*" By W. H. Moreland. (Cambridge: W. Haffer & Sons, Ltd. 15s. net.)

Mr. Moreland requires no introduction to our readers. His previous works on India under the various Moghal Emperors at once took rank as the standard treatises on their subject. And now he gives us "An Historical Essay" on a highly specialised subject which has, till now, been very obscure and, indeed, in great part impossible to follow. Yet its grave importance, not only as a matter of history, but also as matter for study by the present rulers of India can scarcely be exaggerated. Mr. Moreland carefully guards himself throughout his book from *ex cathedra* statements. Rather does he indicate what the facts before him seem to make most likely, pointing out what evidence is wanting and how it may be possible, by search, to supplement the data which we now possess. These data are still meagre, and what there are have, in the past, been too often put before the student in inaccurate or unintelligible form. It has been Mr. Moreland's first task to tackle all his authorities in the original Persian and to see that his texts are the best available. This, in itself, has thrown much light on dark places and has elucidated many puzzles. Next, he has taken pains to rid his book of all the misleading jargon which has done so much, in the hands of his predecessors, to make their work difficult to follow. He has carefully analysed the different terms used at different times in revenue administration, and has been able to assign definite and intelligible English words to cover each of these conceptions throughout. This, added to the author's very unusual gift of lucid exposition, makes it easy for a reader having no previous knowledge of the subject to read the book with interest and to follow its reasoning without difficulty. What this means when such a subject is concerned can scarcely be realised except by the sufferer at the hands of Mr. Moreland's predecessors, though a reader beginning his studies with this book would, we think, be puzzled that this is so. We can pay the book no higher compliment. Though eminently scholarly and, in no sense, a "popular" treatise, it will interest the layman equally with the expert.

We have been careful to avoid discussion of the matter of this essay, for the simple and adequate reason that the present reviewer feels that he has been sitting at the feet of a master from whom he has greatly welcomed instruction, but whom he feels no desire or capacity to criticise. We fancy that those qualified to do so are few. Mr. Moreland has given us *the* book on the subject and it is no dull treatise. It is a book to be read from cover to cover by all interested in Indian administration. After all, the peasant is the basis of Indian well-being.

C. S-W.

"SARAWAK JUNGLES."

"*THE FIELD BOOK OF A JUNGLE-WALLAH.*" By Dr. Charles Hose. Illustrated. (London: H. F. & C. Witherby. 12s. 6d. net.)

Dr. Hose requires no introduction to students of natural history, to the lovers of Nature, or to those who like a well-written book which takes them away in happy dreams to lands of the Tropics. All these, and many others, will eagerly welcome another work from his pen, stored with first-hand knowledge which few other than he possess, and presented with the additional charm of a delightful style and a whimsical quiet humour. Here you may read of the Porter Crab who carries an oval gelatinous plate with him on which he grows a small sea anemone, carrying it above his head like an umbrella and, no doubt deriving advantage from this odd procedure on account of the protecting sting of its burden. "What," says the author, "the Sea Anemone gets out of it, I cannot say; nor is it easy to imagine how the

partnership can have started. How does the Crab know that the Sea Anemone can be useful to it? and how does he first pick up a young unattached Sea Anemone?" Or of the Ant-Eater, which "is probably a remnant from a pre-historic age, and, I am bound to say, looks the part." Or of hundreds of other animals, birds, reptiles, rivers, forests, mountain and other creatures, not forgetting the human inhabitants of the Jungle, with their folk-tales of their neighbours, the birds and beasts. One short quotation we must allow ourselves. It concerns the Carpenter Bee, "a large and beautiful insect which bores holes about the size of a man's finger in any soft wood—the roof beams of your bungalow for choice—scattering chips and dust all over the floor. If you try to get rid of it, by sending someone up a ladder to plug the holes, the bee simply bores through the beam, singing and humming as it works, and having made its way out, starts the same business somewhere else."

If any of our readers are inclined to cavil at space taken up with notes on matters not strictly coming within the territory of *THE NEAR EAST AND INDIA*, let them take our advice and read Dr. Hose's book. They will change their mind and thank the reviewer. Our Buddhist brethren urge the necessity, in this age of evil, to acquire merit. This can be done easily and inexpensively, by handing the "Field-Book" on to a boy with a taste for natural history, unless, indeed, a great desire to join the Sarawak Civil Service is deprecated.

Since this review was written, the death of Dr. Hose has been announced. It is very sad to think that no more words will flow from such a genial pen. C. S-W.

WILDS AND WASTE PLACES IN YUNNAN AND SZECHUAN.

"*TRAILING THE GIANT PANDA.*" By Theodore Roosevelt and Kermit Roosevelt. Illustrated. (Charles Scribner's Sons. 16s. net.)

"Ted" and Kermit Roosevelt have long earned their spurs as travellers and explorers in various parts of the world, and readers of *THE NEAR EAST AND INDIA* will welcome this account of their latest exploits during the present year in territory bordering on the lands in which they are specially interested. The fact that they are now able to present their report on a trek which ended—at Yunnanfu—in May last is in itself indicative of their terrific energy. The book consists of nine chapters written turn-about by the travellers while still on the journey, and all the better for that, and is beautifully illustrated from photographs taken by their companion, Saydam Cutting.

The excuse for the journey was the study of animals in the little-known part of the Provinces of Yunnan and Szechuan and especially the search for a specimen of the Giant Panda, a large bear-like animal known up to 1929 only from a skin secured from a native sixty years ago. Their search involved a long tramp through very difficult country, largely unknown, over many very high passes and through tracts of country where no white man had ever ventured. But fine muscle and stamina, with finer verve, brought them through the physical difficulties, while their natural qualities of human sympathy and understanding smoothed their way with people who might well have proved fatally hostile to others. They had extraordinary luck in avoiding the numerous troops of bandits with whom the country was infested, and they had the satisfaction of returning with their objects duly achieved.

We have every confidence in recommending this book, with its delightful map, to our readers. It is the true quality of adventure, it tells of men and places of which few know anything, and its modest pages unwittingly give us a picture of two fine fellows whom we are glad to know.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Greek Finances.

If one is to judge solely by Greece's Budget finances the conditions of that country are distinctly to be envied. Few Finance Ministers to-day are in the fortunate position of being able to record a series of surpluses, some of them obtained without new taxation, and further to announce remissions of taxation, and M. Maris might well be pardoned if he allowed a note of exultation to enter into his statement last week on the Budget for 1930-31. Dealing with past Budgets he pointed out that that of 1927-28 left a surplus of 590 million drachmæ, and that of 1928-29 one of 545 millions, while it is anticipated that the present Budget will yield a surplus of 616 millions. The Budget for 1930-31 provides for receipts of 10,534 million drachmæ, and an expenditure of 10,525 millions, allowing for a small surplus of 8.7 millions. The expenditure is higher this time because provision is made for the reduction of taxes, notably on agricultural products, for one thing, for higher salaries for Civil Servants for another, and finally for the creation of a reserve fund. It is interesting to note that the Budget contains no provision for the payment of War Debts, as it is anticipated that Greece will have to pay no more under this head than she will receive.

Agricultural Expansion.

In the course of his statement M. Maris dealt with economic developments in Greece, and showed that the productive capacity of the country is steadily being increased. Thus in 1927 the area cultivated amounted to 15,200,000 stremmata, and the value of the crops was estimated at 10,435 million drachmæ, while in 1928 the area cultivated was 15,900,000 stremmata, the value of the crops being 11,556 million drachmæ. For the present year it is anticipated that there will be a larger production, particularly in regard to tobacco and maize. He went on to point out that trade over the same period also shows a marked improvement, and that there has been a notable reduction in the adverse commercial balance. Greece, it must be borne in mind, is still on the threshold of her development, for the numerous important irrigation and other schemes have still to be carried out. The present position of the country, as shown by M. Maris, illustrates the nature of the advance that may be expected when these works have been completed and the refugees are able to add their full quota to the production of the country.

Indo-European Telegraph Company.

Shareholders of the Indo-European Telegraph Company, Ltd., have received a circular informing them that terms have been provisionally arranged for the purchase by Imperial and International Communications, Ltd., of the shares of those who may be willing to sell them. The price offered is £55 cash for each £25 share, and the offer is conditional on its acceptance by the holders of 90 per cent. of the issued shares of the company, or such less proportion as the Communications Company may agree to, within one month from November 22, or possibly within a longer period not exceeding four months. The Directors state that they regard the offer as satisfactory, and they strongly advise all shareholders to accept it. On behalf of the Indo-European Telegraph Company Messrs. Kemp, Chatteris, Nichols, Sendell and Co., and on behalf of the Communications Company Messrs. Deloitte, Plender,

Griffiths, and Co. have considered it, and after a careful investigation have reported that the offer is a fair and equitable one.

Compensation to Directors.

It is provided by the terms of the proposed deal that the Directors of the Indo-European Telegraph Company, other than the Managing Director, shall retire on completion of the sale in favour of nominees of the Communications Company. For so doing they are to be paid compensation for loss of office, the total amount involved being £27,000. A further sum of £30,000 will be set aside by the Communications Company as compensation to the Managing Director for loss of office, but in the event of his being offered, and accepting, office or employment under the Indo Company or the Communications Company this sum will be repaid to the Communications Company. The continued payment of existing pensions to past employees of the company is assured, and provision is also made for the payment of compensation to any members of the company's British and foreign staffs who may lose their employment by reason of the transfer of the control.

Egyptian Market for Cement.

The importance of the Egyptian market for cement, to which I have already referred in these columns, is the subject of emphasis by Mr. Turner in his recent report on Egypt. He points out that the consumption of cement is developing fairly rapidly, and that the average annual consumption for the last two or three years has been about 270,000 tons. For the past year the imports totalled about 270,000 metric tons of the value of £E511,805 as against 224,843 tons and £E472,174 in 1927. Yugoslavia and Belgium are at present the chief supplying countries, but the United Kingdom's share in 1928 was £E101,934, and there is no reason why our share of this market should not be considerably increased.

Bengal-Nagpur Railway.

At the meeting of the Bengal-Nagpur Railway (a report of which will be found elsewhere in these columns) a very satisfactory survey of the company's position was given by the Chairman, Mr. Robert Miller. The gross earnings were the highest on record, this result being due to certain branches of goods traffic. The passenger traffic increased, but the receipts were slightly lower; it is anticipated, however, that the appreciation of increased facilities

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Allar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

will lead to increased revenues from this source. There was a substantial increase in expenditure, due to a full year's work on the three years' programme of strengthening the track and bridges and the purchase of more powerful locomotives. As regards the outlook it is satisfactory to know that for the first half of the current year the gross earnings show an increase of Rs.25 lakhs, and the Chairman expressed the view that after financing the second instalment of the programme of strengthening the line shareholders may look for a margin of surplus profits for division.

COMMENTATOR.

THE BIRMINGHAM HEAVY INDUSTRIES FAIR.

In more marked degree each year the Heavy Section of the British Industries Fair becomes a national index of industrial enterprise. Not only will the 1930 display in Birmingham be of greater dimensions than ever before, but it is now evident that the new products to be introduced next February will be more numerous in proportion and cover a still wider range of industrial and domestic uses. Among some 600 exhibitors who have provided the Birmingham Chamber of Commerce, organisers of the Heavy Section, with advanced information of the goods to be shown, nearly all have one or more articles to bring for the first time to the notice of trade buyers.

These cover every branch of the engineering, electrical, gas, building and hardware industries, and represent research and experimental work which has been in progress practically since the close of the last Fair. While one firm has been busily engaged on improved designs for metal-clad electrical switchgear, giving greater control and safety to operators in factories, mines and power stations, another claims to have solved the problem of driving belts which will take excessive strains on small-sized pulleys. Manufacturers who are world-famous for their measuring instruments will show an entirely new range of industrial visible weighers which give quick self-indications of accurate weights.

Specialists in the maintenance of electrical plant have effected an improvement of windings to stand high temperatures by the use of heat-resisting enamels. A new model of electric arc welder more compact than previous models, and a new rotating electric furnace for melting non-ferrous metals—the only one of this type made in Great Britain—are other features.

An important development in plant for the handling of materials, such as crushers, elevators, screens and belt-conveyors is the serious attention now given to control of feed by the operators, and new apparatus for securing evenness of feed is said to increase the efficiency and life of such machinery by 33½ per cent. and 80 per cent. respectively.

The enormous increase in the demand for gas has brought fresh problems of distribution in regard to altering the pressure from time to time. In this connexion a novel invention of district gas governors, designed to facilitate the alteration of pressures, is of unusual interest. Also in the Gas Section will be seen in operation gas switches—of which models only were shown at the last Fair—stated to be absolutely reliable and incapable of failing.

The National Bank of Roumania has lowered its discount rate from 9½ to 9 per cent. and its rate on loans to 10 per cent.

Holophane, Ltd., of London, have obtained the contract for the complete lighting installation at the new Egyptian University at Ghizeh, Cairo.

The Postmaster-General draws attention to the fact that a considerable proportion of the correspondence posted for transmission to Persia by the Indian Air Mail is insufficiently stamped. The air fee for all correspondence for destinations in Persia is now 5d. per half-ounce, in addition to the ordinary foreign postage. This fee covers air transmission from London by the direct Indian Air Mail to Baghdad or Bushire and thence by air into and within Persia as necessary.

THE ECONOMIC POSITION IN YUGOSLAVIA.

By JOE MANTUANI.

We are often asked whether Yugoslavia's economic consolidation is progressing or no? The sensational reports of bank failures and financial crises in particular have not tended to place Yugoslav economics in the best of lights. In order to see things as they really are, we must regard the country's economic and financial development from a more general point of view, and above all from that of a student of national economy.

Unquestionably Yugoslavia is passing through a commercial crisis, a fate she shares with almost the whole of the rest of Europe. That crisis is mirrored in the activities and attitude of our banks. One proof that this crisis is not so terrible after all is afforded by the payment, precisely at this juncture, of the liabilities of the Slavenski Banka, which failed several years ago; another by our factories, which are in full work. Our export crisis is one of those calamities with which all the Eastern, and especially the South-Eastern, States of Europe have to reckon. Yugoslavia, with her enormous agricultural output cannot, of course, obtain such prices on the world markets as her producers and brokers would wish. Railway tariffs are high, and traffic over-burdened. On the other hand, Yugoslavia is exempt from trouble with some of the other problems which handicap the social and economic development of other countries. The question of unemployment does not loom very large. Compared with its proportions in the great states of the world, we might say that it does not exist. Nor does the question of emigration play a particularly disquieting part. Emigration from Yugoslavia is not so much a matter of necessity as love of adventure on the part of private individuals, because there is still plenty of good, untilled soil in Yugoslavia; there are vast forests, and truly enormous areas of land which could be profitably exploited without much initial expense. Industry is still run on a small scale. Few industries have an output sufficient to meet the home demand. The Carbide Works in Dalmatia form a notable exception. Imports are fairly well balanced by exports. Foreign traffic is far greater on the western and northern frontiers, however, than on the eastern frontier.

The growth of the co-operative system is very marked, especially in the north of Yugoslavia. Tradesmen, peasants, and small manufacturers are well organised with sound financial backing. These co-operatives have their own banks, markets and shows, and their own organised supply which works well, and their influence extends to the large wholesale manufacturers which are largely dependent upon them in matters of supply. In the south the influence of these co-operatives has not yet grown so strong. Beyond all question the change of régime on January 6 definitely cleared up a situation which was very complicated, not only in a political, but also in the economic sense.

Commercially speaking, the purchasing power of Yugoslavia has somewhat declined, but an improvement is to be looked for after the autumn and winter export seasons, when it is likely to be greater than it was a year before, more especially because Yugoslavia already enjoys the new customs facilities agreed upon with several of her neighbours, and the use of a new export harbour, viz., Salonika. The call for agricultural machinery and machinery for working up timber ought to be greater than ever next spring, because the purchasing power of the peasant and manufacturer is likely to have grown. And on this occasion, as on former ones, I should like to draw the attention of British exporters and manufacturers to the big deals which are likely to be concluded here next year, and to the business facilities offered to all importers by the various samples fairs, exhibitions, and public tenders in Yugoslavia.

ECONOMIC CONDITIONS IN GREECE.

The current issue of the weekly report of Hambros Bank, Ltd., contains the following:—

A Greco-Roumanian Chamber of Commerce has been established and is functioning since October 1, 1929 at Piræus. Its object is to further the commercial interests of the respective countries.

A decree fixes at 250 drachmæ per 1,000 Venetian pounds the export contribution of the currants exported during the year 1929-30. A special tax of 150 drachmæ per 1,000 Venetian pounds is also levied, the proceeds of which are placed at the disposal of the Central Currant Association in order to provide funds for the advertisement of the currants abroad. The above contributions are paid to the National Bank of Greece against receipts which are produced to the Custom House authorities in order to obtain the necessary export permit. A tax of 25 drachmæ per 1,000 Venetian pounds is levied on all currants which are sold and stored in the warehouses of the Central Currant Association during 1929-30. The proceeds of this tax will be spent in advertising the currants in Greece.

According to the recently published general statistical marine tables, there have entered Greece during 1928 23,323 steamers, of a net tonnage of 14,653,958 tons, which carried to the country 2,496,466 tons of goods from abroad and 516,582 tons from inland.

The Bengal Chamber of Commerce is considering the purchase of a fourth dredger for use on the River Hooghly below Calcutta.

A Near East Market, in aid of the funds of the Church Missionary Society, was held at the Church Missionary House, Salisbury Square, E.C.4, on November 20 and 21. The market was opened on the first day by Lord Mayor and the following day by the Countess of Leitrim.

A meeting of shareholders in Eastern Oil Industries will be held at Mark Lane Station Buildings, E.C.3, on December 17, when resolutions will be proposed for amalgamating the company with Eastern and Overseas Products.

The death is announced, after an operation in a London hospital, of the Rev. Joseph Shepherd, pastor of Islington Congregational Church. He began his career at Buckley, Flintshire, as a printer, and having entered the ministry, was appointed pastor of the Congregational Church at Ripon. Before his call to Islington he resided in South Africa. During the War he was a chaplain in Palestine, and was twice torpedoed.

The Metropolitan Museum of New York recently announced that it had found, at Luxor, a tomb believed to be that of the wife of Amen Hotep II., Queen Meryet-Amun. It is understood that examination has now established the fact that the mummy was the wife of Amen Hotep II., who reigned from 1461 to 1436 B.C. Her coffin is immense, about three times the usual size. It was brought to Cairo some months ago, and the body bore evidence of rewrapping after burial.

The total quantity of petroleum products exported from Roumania during September amounted to 228,734 tons, as against 277,325 tons exported during August. The principal importing countries were as follows:—Italy, 41,490 tons; England, 25,609 tons; Austria, 18,912 tons; Hungary, 18,511 tons; Greece, 16,540 tons; Germany, 16,063 tons; Poland, 15,580 tons; and Egypt, 14,748 tons. Of the total exports 154,201 tons were shipped from Constantza and 44,840 from Giurgiu, while 18,840 tons went from Oltenitza.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Luxor. The principal materials required are 10,850 metres of steel tubes of various sizes from 80 m.m. to 300 m.m. internal diameter, together with specials, 58 sluice valves, 15 hydrants, 7 column hydrants, and 6 drinking fountains. January 7. (D.O.T.)

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping machinery. The contract involves centrifugal well pump and direct coupled electric motor, together with piping and accessories. February 1. (D.O.T.)

Transmission Lines.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of high tension 3-phase overhead transmission lines in Northern Delta, consisting of a main line of about 105 kms. and branch lines of about 150 kms., including all necessary materials for the lines and all accessories. February 27.

Diesel Engines.—The Ministry of Public Works, Mechanical and Electrical Department, invites tenders for the supply and erection of two Diesel engines and accessories. January 4. (D.O.T.)

Direction Indicators.—The British Commercial Secretary at Cairo (Mr. R. M. A. Turner, O.B.E.) has reported a possible opening for the sale of direction indicators for motor buses and taxicabs in Egypt. (D.O.T.)

Electric Generating and Pumping Sets.—The Ministry of Public Works, Egypt, invites tenders for the supply and delivery of electric generating and pumping sets for the Mankabad Barracks. December 28. (D.O.T.)

THE SUDAN.

Stores.—The Inspector, Headquarters, Egyptian Irrigation Department in the Sudan, Khartoum, invites tenders for the supply of running stores for steamers and launches, chiefly oil, grease, ropes, iron bars, bolts and nuts, electric equipment, files, etc. December 14.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Manchester, December 3; Birkenhead, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Markhor for Calcutta (Birkenhead, December 7); s.s. Mahout for Calcutta (Glasgow, December 5; Birkenhead, December 14).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 11).

British India Line.—S.s. Masula for Bombay (Middlesbrough, December 3; London, December 14); s.s. Margha for Colombo, Madras, and Calcutta (Middlesbrough, December 7; London, December 14).

Cunard Line.—S.s. Bothnia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, December 12; Liverpool and Swansea, December 13); s.s. Bosnia* for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, December 21; Swansea, December 24). *This sailing is not definite.

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 21).

P. and O. Line.—S.s. Bangalore for Bombay and Calcutta (London, December 6); s.s. Ranpura for Bombay (London, December 6).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 30); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 10); s.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandria, Mersin, and Cyprus ports (London, December 14).

Ellerman and Papayanni Lines.—S.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 5); s.s. Lishon for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, December 7); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 7; Swansea, December 12); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 12); s.s. Algerian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 28; Swansea*, December 28); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30).

*Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*†CASTALIA ... Dec. 10 *†ELYSIA ... Feb. 4
‡BRITANNIA ... Jan. 10 ‡TUSCANIA ... Feb. 11

‡ Leaves Marseilles January 18 and February 17.

*First class passengers only. Specially low fares. †Calls Port Sudan.
‡ First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL Feb. 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 26.

There was a somewhat uncertain tone at the opening of business this week in the Stock Markets, but there was a steady improvement as time went on. The most important factors contributing to this improvement were the cessation of liquidation in New York and anticipations of a reduction in Bank rate here, the latter proving well founded on Thursday when a reduction of $\frac{1}{2}$ per cent. to $5\frac{1}{2}$ per cent. was made. Those who had hoped for a 1 per cent. reduction were disappointed, and as the actual change that was made had been well discounted in advance the effect on stock market prices was negligible. Indeed, after the announcement was made prices were inclined to weaken. The result of the Conversion Loan issue, announced by the Chancellor in the House of Commons on Monday, was regarded as satisfactory and the gilt-edged market has been much firmer during the week. There are, however, a number of factors which still obscure the monetary outlook. It had been thought that the New York Federal Reserve Bank would lower its rediscount rate on Thursday, following the reduction by the Bank of England, but no change was made. Substantial amounts of gold are due to arrive here in the next few weeks, but there is yet no sign of France's appetite being assuaged, and in the meantime the Bank of England's gold stock is little better than it was several weeks ago when Bank rate was raised from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent.

Industrials Again.

Last week we referred to some leading industrials which as a result of present market conditions are obtainable at distinctly attractive prices. This may be said of several industrials now. In the country at large the industrial outlook is on the whole promising, and soundly established businesses should be able to continue to do at least as good business in the future as they have done in the past. As it is, after all, the firm business activity which determines dividends, the present Stock Exchange conditions have allowed some securities to fall below their earning power value. Since last week a recovery has already taken place, but some good purchases can still be

made. Dunlop's, for example, which owns or controls rubber plantations and rubber manufacturing plants of various kinds, although it did not do too well last year, which was an exceptionally bad period for the rubber industry, is now once again in a sounder position. Its ordinary shares, whose total nominal value amounts to about £7 million, can be bought to yield £8 13s. per cent., and on the 10 per cent. "C" cumulative preference shares a return of £7 10s. per cent. can be obtained. Yet another well-established and progressive firm is J. Lyons and Co., the caterers, whose ordinary shares yield £4 12s. per cent. and 7 per cent. preference yield £5 19s. per cent. The good appreciation prospects of this firm's shares, it will be seen, is somewhat discounted in the price at which they are obtainable. Finally, Distillers Company may be mentioned, which for a number of years has paid a regular 20 per cent. on its ordinary shares. These can be bought to yield £5 12s. per cent.

Oil Interims.

The announcement of unchanged interim dividends by "Shell" Transport and Trading and its ally, the Royal Dutch Company, accounted for a hardening in the shares, particularly as in the case of the former concern the distribution is made on the substantially enlarged capital. Moreover, the oil industry has of late been showing signs that the worst of the over-production has been seen, though it is as yet far too early to discuss the outlook with confidence. In the last three weeks the average daily output of crude oil in the United States has fallen by 50,000 barrels, 188,000 barrels, and 11,000 barrels, so that the efforts at restriction appear at last to be bearing fruit. It has also been insufficiently recognised that the consumption of oil has increased steadily in recent years. The demand for the first eight months of the year in the U.S.A., for example, was 722,198 barrels, compared with 660,595 barrels in the corresponding period of 1928. Nevertheless, until a continuance of the curtailment of production seems certain, investors would do well to confine their attention to the great producing-cum-distributing concerns, who by the wide range of their operations minimise the risks inevitable in this industry. Among such companies, Shell ordinary return £5 8s. per cent. and Anglo-Persian £3 per cent. The low yield in the latter is accounted for by the fact that although production has been steadily increasing, the vast resources of Persia have as yet been barely touched.

Some Railway Preferences

The last few months have continued to see signs of improved profit-earning possibilities of Home Rails and have maintained the investment attractiveness which they are once more acquiring. There is another reason why the prior charge stocks of the British railways are attractive at the moment. The fall in the Bank rate of three weeks ago, followed by the reduction to $5\frac{1}{2}$ per cent. on Thursday, together with other signs, suggests the likelihood of cheaper money in the near future, and with their present yields some well-secured railway preference stocks look attractive. London and North Eastern last year had a balance available for dividend distribution of £7,336,377, which, after meeting prior stocks, left sufficient to cover the dividend on 4 per cent. first preference $2\frac{1}{2}$ times. This well-secured stock can be bought to yield £6 5s. per cent. The London, Midland and Scottish Railway, by many regarded as the most efficiently managed of our railways, last year had £11,965,399 available to pay dividends, and when other charges had been met, enough was left to cover the 4 per cent. preference dividend about $2\frac{1}{2}$ times. The yield on this stock is £5 15s. per cent. Another well-covered railway preference stock is the Southern 5 per cent. preference, whose dividend last year were covered $2\frac{1}{2}$ times, and which can now be bought to give a return of £5 13s. per cent. It will be remembered that all these stocks rank as English trustee securities.

King Alexander of Yugoslavia conferred the Order of Saint Sava upon Dr. Greig, Bishop of Guildford, formerly Bishop of Gibraltar, in whose diocese Yugoslavia is included.

NOTES FROM BULGARIA.

*(From Our Own Correspondent.)**Sofia, November 20.***The Reparations Question.**

The question which occupies attention at present is the settlement of reparations which has been the subject of negotiations for some weeks in Paris. Readers of THE NEAR EAST AND INDIA know the aspects of the question. The enormous sum of 2,225 million gold francs at 5 per cent. interest, fixed by the Treaty of Neuilly as the reparations debt of Bulgaria, was shown to be unrealisable in practice and the Reparations Commission made a first reduction by the conclusion in 1923 of the Stamboliski Agreement, by which the debt was divided into two parts, of which one of 550 millions began to run at once with the same rate of interest, while the other of 1,700 millions without interest would not become payable until after 1953, which was regarded as annulling it for practical purposes. But, as the country is not able to make large annual payments, the annuities which it has paid since then, and which began at 5 millions rising progressively to 10 millions, an amount in force up to 1932, have not even reached the point of covering the interest on the sum fixed, and it was tacitly understood by virtue of Article 122 of the Treaty of Neuilly, that on the approach of the large annuities of 33 and especially of 43 millions which would begin from 1934, and which evidently could not be paid as they exceeded the possibilities of the country, the plan of 1923 would be profoundly modified by a further large reduction.

It is in these conditions that the Paris Committee has

come to examine the question. But instead of proceeding to a thorough investigation of the capacity of Bulgaria to pay, as was done in the case of Germany, the experts, tied by the final protocol of the first Hague Conference, and especially by the promises made by the Great Powers to their Allies, notably to Greece and Roumania, adopted an opposite procedure, and began by decreeing that Bulgaria must pay a part determined by the deficit on the Young scheme. Thus the Committee made to Bulgaria, after hearing the explanations of her delegates, a first proposal tending to regulate the Bulgarian reparations debt on the basis of the 1923 agreement adding to the sum of 550 millions interest due, making a total of 700 millions, divided into 36 annual payments to remain without interest. The proposal was categorically and without any hesitation rejected by the Bulgarians, who did not believe themselves to be able even to make alternative proposals. Subsequently, however, alternative proposals were put forward and were rejected. At the conclusion of the lengthy negotiations in Paris the Powers ended by making a new proposal based on an average annual payment of 12½ million gold francs, making a total of 450 millions without interest.

If we compare this scheme with that of the agreement of 1923, which provided for 62 annual payments making a total of 2,253,266,000 gold francs, it must be admitted that there is a considerable reduction. But this reduction was found inadequate in view of the exhaustion of the national economy, and the Bulgarian Government refused to accept it even when it was stated that the settlement also included the part still to be paid of the occupation debt expiring in 1934. Then the three Great Powers, Great Britain, France, and Italy, already very perturbed at the attitude of Hungary, decided to bring the matter to an end, and to state by their representatives at Sofia—a step which had all the appearance of an ultimatum—that this proposal was their last word and that they urged Bulgaria instantly to accept it, as otherwise they would revert to the first proposal without any change at all. The Bulgarian Government intended to go to discuss the question and to defend its rights before the Hague Conference. It is doubtful, however, whether the ultimatum leaves open the possibility of this recourse, the three Powers being determined to end the business before the meeting of the Conference.

Every effort is being made at present to obtain at least some slight additional concessions, so as to satisfy inflamed public opinion which has begun to give vent to violent manifestations and hostile demonstrations before the Legations of the Powers which are believed to be the most intransigent, notably France and Italy. There is some irony in the fact that the very day when the country, led less by its politicians than by its business men, workers, and artisans, should have inaugurated a national struggle against reparations should have been chosen by the representatives of the Powers to communicate their ultimatum to the head of the Government. The protest of the business community was particularly stirring. The shops, warehouses, banks, and offices were shut in every town, and the people went to pass a resolution protesting against the treatment inflicted on Bulgaria whose economic and financial state did not permit of the payment of reparations, and inviting the Government and the political parties to do everything possible to bring about the alleviation of an insupportable burden.

Lloyd's agents in Constantinople have been informed by the Post Office authorities there that instructions have been sent to foreign Post Offices stating that telegrams for that city should no longer be addressed "Constantinople." To an inquiry whether the new name of the port as communicated to foreign Post Offices was "Stamboul" or "Istanbul," the reply was given that the Turkish "Istanbul" is the correct name but that "Stamboul" was considered the French way of writing "Istanbul," and that consequently no distinction would be made between the two words, and telegrams addressed "Stamboul" would be accepted and delivered. With regard to letters no change had been made; letters addressed "Constantinople" will be delivered as usual. No change could be made, a high official stated, until the general public abroad had become aware of the new name.

Motors and Motoring.

(By Our Motoring Correspondent)

Registration Books.

It seems probable that registration books, which have never been the success expected, will be scrapped before long. These registration books were first brought out in 1920, and optimists said, unhesitatingly, that they would be like a ship's log, that they would absolutely prevent car thieves from getting away with their booty, that if a car was stolen, no one could possibly sell it, and so on. The ordinary motorist was not so sure, and the respective values of the two opinions may now, after nine years, be appraised. Bluntly, the scheme has failed, utterly, and the books are merely a source of irritation, like many other pieces of motor legislation. During recent years official tendency has been in the direction of complication rather than of simplification; there seems no real reason why the ownership of a car should be more full of annoyance than the ownership of anything else.

The whole subject has been tinkered with rather than dealt with, and no amount of registration books will prevent unfit people from driving cars if they want to do so, nor keep reckless and careless drivers off the roads. They add nothing to the safety of the public, and no more cars will be stolen and no more regrettable road accidents will occur if they are promptly scrapped. The only way to deal with undesirable motorists is to make it known to them, as forcibly as possible, that they have certain obligations towards other road users and to leave it to the police—to motor cycle police as soon as such a body can be created and organised—to enforce upon the almost negligible number of road hogs the observance of ordinary care in driving.

Atmospheric Wear.

Professor A. M. Lowe, who has done so much useful, if not always properly appreciated, work in connexion with motoring, writes to the technical Press to say: "I have often wondered if a greater immunity from atmospheric wear and tear upon cars could be secured by choosing substances which do not readily combine to form a battery when dipped into the relatively acid water produced by rainfall in large cities. If cast iron, copper and even zinc are all exposed to rain, and, worse still, are allowed to remain in contact with each other, it is only to be expected that electrolysis in some form of other, will take place. Most changes—if not every change of state which takes place in the world—are due to electrical action, although we are as yet unable to define its precise nature. When I read that a bridge has been completed by the driving in of a silver rivet, I am reminded that this metal is the last which should be chosen for such a noble purpose. In the presence of sulphur, silver commonly turns a dirty black, as in the case of a half-crown carried in the pocket with a piece of rubber. The coin of the realm is hardened by an admixture of other metals, and I must explain that if any metals could be obtained in a state of chemical purity, electrical action might be difficult to secure. Even if the rivets were poured into place for the convenience of whoever presses the button, cuts the tape or breaks the bottle of champagne, the difficulties of the engineering department would not be at an end. Silver has the rather quaint habit of "spitting" when it is cast under certain circumstances and conditions, for soon after it apparently solidifies it may spurt out in the manner of those delightful serpents which we light at Christmas time."

There is a good deal in what Professor Low says, and there is no doubt that, in car work, as well as in other directions of engineering practice, we do place different metals in altogether unscientific proximity with the result that electrical action takes place as soon as acid rainwater falls upon them. What we are accustomed to regard as

ordinary corrosion and rust is frequently caused by a number of miniature electrical batteries being brought into action, batteries that owe their inception to a little want of thought on the part of the car designer.

Cold Weather Precautions.

As soon as really cold weather sets in, there will probably be the usual number of frozen radiators and cracked castings. Many owners take the precaution of draining off the radiator water before putting the car up for the night and fill up with warm water, to get easy starting, when they take it out again. Others install some form of heating in the garage or hang some form of portable lamp inside the bonnet of the car after they have finished driving for the day. There is much to be said in favour of this method of dealing with the trouble, and there are many designs of such lamps obtainable, some using ordinary paraffin and others running on electricity. Many owners might hesitate before hanging a lamp inside a car in fairly close proximity to the carburettor, but with a good make of lamp there is no danger. Most lamps of the kind are designed to hold sufficient oil for several days' use, and in the long run these will probably be found most convenient. In bad weather, it is by no means a pleasant task to wander down to the garage each day to refill a lamp that has an oil container only capable of holding twelve or fourteen hours' supply of oil. If power is laid on to the garage, electric heaters are in every way the most suitable for the work. Where external heating is impossible, and it is considered advisable to drain the radiator, care must be taken to see that water is not trapped, by an air lock or other cause, in the cooling system. Cases have been known where the drain cocks were fitted too high to allow the water to drain away from the lower connexion between engine and radiator, and if that is the case, as can be ascertained by careful inspection, a new hole should be drilled and tapped, in the correct position, and a new drain cock fitted. Comparatively few motorists nowadays seem to adopt a precaution which was often taken, and which was always efficacious, in the old days, which was to add about a quarter of a pint or more of glycerine to the cooling mixture. There are a number of anti-freezing mixtures, all of them useful, which are now on the market for use in a similar way, but glycerine is about as good as anything that can be used.

Miscellaneous.

Owners of Clyno cars will be interested to hear that R. H. Collier and Co., Ltd., Coventry Road, Yardley,

Birmingham, are prepared to deliver all ordinary Clyno spares without delay. They have compiled a spare parts price list dealing with the 11 h.p., and the 12-28 h.p. models, and they will send a copy of this to any reader interested. They are also compiling a list in connexion with spares for the 9 and the 12-35 h.p.

It is understood that Mr. Chas M. Lomax has been placed in control of Chrysler Motors, at Kew, and also of Dodge Bros. (Britain), Ltd., at Acton, following the resignation of Mr. Chas. Macaire who so long and ably filled the post of managing director of Chryslers. Mr. Lomax has been treasurer and a director of Chrysler Motors since 1919.

ECONOMIC OUTLOOK IN SYRIA.

Syrian commerce in general has suffered from the failure of the cereal crop in 1928, following only fair agricultural returns in 1927 (says an article in the United States "Commerce Reports"). The shortage of cereals necessitated heavy imports of foreign wheat and flour, to the detriment of other imports, and simultaneously reduced the purchasing power of the population. This decline in buying power, followed by a general tightening of credit by the banks, rendered the position of many merchants difficult and resulted in numerous bankruptcies. During the latter part of the year, however, conditions became more satisfactory, and recent reports point to favourable crop returns for 1929. Budget operations indicate a small surplus, and note circulation has expanded. Motor traffic continues to increase, with further improvement and extension of the existing road system. The foreign trade situation has shown little change, though purchases from the United States continue to increase.

Agricultural returns in 1928 were generally lower than in 1927 because of the drought and the damage from locusts. Cereals suffered the most, and the yield was sufficient only for a quarter's consumption necessitating the importation of large quantities of wheat and flour, in contrast with normal conditions when a small surplus is available for export. The fruit crop did not approach the previous year's output, although the orange crop was normal. Production of olives was about one-half that of the previous year. To encourage this important branch of agriculture, the Government purchased from Italy 15,000 olive shoots and sold them to farmers at half price. Silk culture continued to improve, 3,350 metric tons of cocoons being produced as compared with 3,185 in 1927 and 2,960 in 1927. The growth of tobacco is expanding, with a gradual increase in sown area. Cotton is cultivated mainly in the State of Syria, the total yield for 1928 being estimated at 1,200 metric tons as against 1,500 in 1927. Sheep raising forms another important branch of industry, as indicated by the growing exports of wool.

Although Syria is primarily an agricultural country, some industries have shown steady progress. Notable among these is the textile industry, where developments have brought about a decline in imports of textile materials, and some export to Egypt, Iraq and Turkey. The tanning industry also is being gradually expanded. The steady growth in imports of modern machinery to replace

the primitive equipment heretofore used was particularly notable in 1928.

Syrian exchange during 1928 was practically stable, the Syrian-Lebanese paper pound averaging 0.783 dollar as against 0.785 dollar for the preceding year. In the interior, Turkish gold and silver continue to serve largely as the currency of commerce, silver remaining about constant at 11 mejidichs to the Turkish gold pound which is worth about 4.40 dollars. The use of Syrian paper currency, however, is being encouraged by the authorities, who offer a more favourable discount rate. During 1928 discount rates written in Syrian paper currency have averaged from 6 to 6½ per cent., and for bills written in Turkish gold from 8½ to 9 per cent.

The use of motor transport for both passengers and freight has increased steadily, resulting in a general extension of the existing road system and offering serious competition to the railroads. At the close of 1928 the road from Latakia to Aleppo, via Idlib, was approaching completion, and a road between Latakia and Alexandretta was under construction. In the Damascus area improvement were made on the main roads, and a strip of about seven kilometres of asphalt road was completed from Damascus to Doumar on the Beyrout Road. In the Lebanon district, the Beyrout-Nahr el Kelb and the Beyrout-Khalde roads were asphalted during 1928 for a total distance of about 40 kilometres. Lack of funds, however, continues to handicap extensive work on the road system of the country. The trans-desert rout, Beyrout-Baghdad, continued to grow in importance with both passenger and freight traffic steadily increasing.

Railroad service on the Aleppo-Constantinople road has passed the experimental stage, and the journey is now being made in about 48 hours with comfortable sleeping and dining accommodation.

SILK INDUSTRY IN THE SUDAN.

The October report of the Central Economic Board of the Sudan Government, in referring to work done at Tembura, Bahr el Ghazal Province, states that a further supply of white and black mulberry seed was received from the Imperial Institute, London, in February, and large nurseries were made from the seed both at Tembura and Yubo, and did well. Some of the seed was also sent to Wau and Meridi. In addition to seed beds, large quantities of cuttings from the young plants put out in 1928 now cover an area of about 20 acres. Four hundred trees are planted to an acre and some of the bushes are very fine. Cuttings were also taken to Meridi and many thousands to Yubo, where there are about 10 acres under mulberries. All these plants and bushes are, of course, still young and they will require another two years to attain a good size and produce a large commercial "leaf" supply for feeding silkworms in bulk. It has now been proved that mulberries can be grown in Bahr el Ghazal Province, and all that is now necessary is a large commercial "leaf" supply, which will doubtless be achieved. An incubator ordered from London unfortunately arrived at Tembura broken, so it was not possible to hatch out in bulk the silkworm "seed" received from the Imperial Institute. The "seed" was found suitable, and a certain amount of worms were fed and the silk was afterwards wound off. A new incubator and dryer are being obtained, and it is hoped to proceed with the experiments next year.

Following the Greek Government's protest to the Straits Commission concerning the delays to which Greek ships in transit in the Dardanelles were subjected by the Turkish authorities the Commission has taken up the matter with the Turkish Government and there are no longer any delays.

The crude oil production of the Roumanian fields during October amounted to about 430,000 tons. The output of the principal operating companies was as follows (in tons):—Steaua-Romana, 94,535; Astra-Romana, 79,150; Phoenix Oil, 42,291; Sirius, 37,434; Creditul Minier, 34,272; Romano-American, 31,597; Concordia, 19,892; I.R.D.P., 15,168; Petrolul Romanesc, 15,235; and Colombia, 14,752.

Near East Markets

NEAR EAST MARKET REPORTS.

The following cabled reports have been received by Barclays Bank (D. C. and O.):

EGYPT.

Alexandria, November 18.

Cotton.—During the past month the market has on the whole displayed a bearish tone, the high Bank Rate in England and the general financial conditions in Egypt being largely responsible. The heavy fall in security prices on the New York Stock Exchange also had its repercussion locally, with a discouraging effect on the cotton market. As had been anticipated, the difference between Sakellarides and Upper Egyptian narrowed considerably and Sakels now stand at 27.45 dollars, with Uppers at 19.29 dollars. This factor has resulted in a steadily increasing interest in Sakel cotton and a corresponding decrease in Uppers, the tendency being accentuated after the close of October, when, forward shipments for that month having been completed, there was a noticeable falling off in the demand for Uppers. New reports confirm the size of the Egyptian cotton crop, which is now estimated at about 8,000,000 kantars, a figure ensuring an ample supply of this cotton for the world's needs. Arrivals from September 1 to date are 3,229,766 kantars, compared with 3,673,897 kantars for the corresponding period last year, while exports amount to 1,372,740 kantars against 1,804,678 kantars. Stocks are 2,924,232 kantars compared with 2,972,299 kantars a year ago.

Cottonseed.—The demand has fallen off considerably and prices have declined to around P.T. 85 per ardeb. Arrivals from September 1 to date are 1,483,598 ardebs, compared with 1,486,455 ardebs in the same period last year, while exports amount to 658,957 ardebs against 911,008 ardebs. Stocks are 961,296 ardebs compared with 1,072,104 ardebs. Local consumption has been 220,016 ardebs against 260,124 ardebs a year ago.

Cotton Goods.—Despite the weakness of cotton, the demand for cotton goods has been fair, and the tone of the market has been very steady.

Flour.—The demand for flour of all varieties has been satisfactory, but owing to the nervousness of the wheat market, prices have ruled irregular and, on balance, have declined. Stocks are large, but they are in the hands of strong holders and quantities afloat are light.

Sugar.—The market has shown a gradual improvement. Arrivals from all sources have been abundant, but the demand for local consumption and for export has been satisfactory.

Rice.—Spot supplies of imported rice are scarce and the market has followed the decline of Rangoon. Egyptian rice is active, but owing to an abundant crop prices have been easy.

Gunnies.—Business has been unusually quiet and arrivals, combined with stocks in store, are more than ample to meet the inquiry for cottonsacks.

Cereals.—Stocks of cereals are decreasing, except in maize. The quantities in shoonahs and barges are as follows (in ardebs): wheat, 148,500; beans, 24,000; lentils, 21,500; barley, 26,500; maize, 12,500.

Stocks and shares.—Quotations generally have been lower, except for Egyptian Government stocks.

THE SUDAN.

Khartoum, November 16.

All markets have been inactive and there has been very little movement of any kind, but an improvement is said to be expected in the near future. The demand for piece goods has been weak, with declining quotations and heavy stocks. Some dealings in the new gum crop at high prices are reported, but, pending a clearer indication of

the position, foreign buyers are not operating freely. Arrivals to date have been fair and are expected to be larger in December. Adequate sales are reported for the new crop of sesame. The crop of groundnuts has been good and average exports to Egypt and the Continent are anticipated. Coffee has been dull, with a small demand, and quotations have declined to P.T. 350 per kantar.

PALESTINE.

Jerusalem, November 14.

Trade has been dull and the effect of the August disturbances is still being felt. Importers, however, are placing orders, although on a much smaller scale than formerly. Direct shipments of oranges to the United Kingdom to date include 25,508 cases for Glasgow and 23,000 for Liverpool. The Colonial goods market is very quiet. Prices for flour and cereals remain unchanged. Government revenue for the first eight months of the current year was £P1,471,612 and expenditure £P1,164,578.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended November 16:—

Grain.—Last week's stagnation was, if anything, accentuated this week. In spite of very low quotations from this side, sales abroad were impossible. Maize, which was slightly in demand recently, was likewise neglected, and what few shipments of this commodity took place were all in fulfilment of old sales. In the circumstances, and in view of the accumulation of tonnage, rates of freight declined from 15s. 6d.-15s. 9d. as same were a fortnight ago; 14s. and even lower has been accepted for steamers requiring completions, whilst large parcels were booked for end November beginning December shipment at 14s. 3d. In the meantime, owing to the increased daily arrivals of grain from up-river and the approach of winter, prospects of an improvement in freights is not unlikely. At Constantza the situation became worse, and steamers requiring cargo there had to accept as low as 7s.

Timber.—For Syria and Alexandria the demand for space continued and freights were maintained. For other destinations, however, the demand was weaker and shippers easily obtained space at reduced rates, some small vessels for Greece having been obliged to accept low rates to complete their cargoes. Present rates are: Syria and Alexandria, £11; Greece, £7 10s.; Italy, £10/£10 10s.; South France and North Africa, £10/£11. A parcel of 100 waggons for Rotterdam has been booked at £11 10s.

Weather and Crops.—The mild moist weather of the last few weeks has continued, but the rain has been more frequent and occasionally heavier. The latest report issued by the Ministry of Agriculture indicates excellent conditions for the autumn sowings throughout the country, the only exception being a few districts in Central Bessarabia, which still complain of insufficient humidity.

Sulina.—Bar depth, 24 feet, which has been maintained notwithstanding that boisterous weather has continually hampered dredging operations. River depth, 24 feet. There has been a considerable rise in the river level during the week and the minimum depth is now not less than 24 feet in the navigable channel.

Navigation Dues.

On November 11 the Commission of the Danube issued a Bulletin containing the following modifications:—

1. Article 4 of the Tariff of Navigation Dues is modified as follows:—Every sea-going vessel having a draft not exceeding 23 feet which owing to insufficient depth of water on the bar would be obliged to lighten either entering or leaving, will be allowed a reduction in dues to the extent of gold francs 0.075 per ton for each 6 in. lightened, provided that the reduction shall in no case exceed 50 per cent. of the dues. In the cases provided for by Article 4 of the tariff, no reduction in the dues is allowed for fractions of a foot lightened less than half a foot.

2. This modification of Article 4 of the tariff will come into force from November 1, 1929.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London, W.C. 2, Cross Street, Manchester, and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool

Constantza.—This week about 10,500 tons of grain arrived from the interior and over 20,000 tons were shipped to the Antwerp/Hamburg range. Ten vessels loaded about 36,000 tons petroleum products, and six took oil fuel for bunkers.

Bulgarian Report.

Bourgas, November 9.—Owing to the continued drop in grain prices abroad fresh transactions have been restricted. There are about 1,600/1,800 tons Antwerp/Rotterdam/Hamburg in the market, but cargo offering for other destinations is insignificant. The weather has been variable, alternating between sunshine, rain, and fog, with a mild temperature very satisfactory for autumn sowings.

SUDAN GUM ARABIC MARKET.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended October 31:—

Arrivals in Kordofan stations of gum of the 1928/1929 season were almost nil during the month: they amounted to 8 tons only, as against 126 tons last year, a shortage of 118 tons or 93 per cent. The total arrivals of Kordofan gum from the beginning of the season to date amounted to 10,980 tons, as compared with 16,540 tons for the corresponding period in the 1927/1928 season, a shortage of about 5,470 tons or 33 per cent. With the shortage of inferior Hashab estimated at about 2,000 tons, the total shortage in Hashab gums as against last season would amount to date to 7,470 tons.

El Obeid prices fell considerably, but considering the insignificance of the arrivals sold at that market (2 tons for the whole month), it will be easily realised how little of an indication the El Obeid prices are at present. In any case, prices of spot goods abroad have eased in sympathy with the speculative prices for new crop gum quoted from this end.

Demand on the whole has been small. The repeated reductions of prices quoted for new crop have generally rendered buyers chary of placing their orders, and these two factors, small demand and lower prices, reacting on each other resulted in still lower prices and smaller demand.

New Crop.—Nine kantars (about 8 cwt.) of new crop gum have been brought to the markets. The quantity is in any case too small to form any indication as to when the new crop gum will start coming in sufficiently large quantities to be of real interest or whether the bulk of the crop will be early or late. It might be recalled here that in previous years the new crop arrivals generally started towards the end of November/beginning of December.

The prices of Talha (ready goods) fell 3s. per cwt. during October.

In the course of his Budget speech, M. Maris, Greek Minister of Finance, stated that in Athens there was one shop to every 32 inhabitants.

Shell Company (Red Sea), Ltd., has been registered as a private company with a nominal capital of £5,000 in £10 shares. The objects are to carry on the business of producers, refiners, storers, transporters, suppliers, sellers, and distributors of petroleum and other oils and any products thereof; shipowner, etc.

NEWS FROM ALL SOURCES.

Negotiations are pending for a commercial treaty between Roumania and Hungary.

The Egyptian State Railways have given a contract for buffers to Turton Platts Company, Ltd., Sheffield.

The Bengal and North-Western Railway have given a contract for 22 locomotives to the A. E. G. Company, Berlin.

It is officially announced that the Rt. Hon. Viscount Goschen, G.C.I.E., C.B.E., has been appointed a Director of Westminster Bank, Ltd.

Mr. Arnold John Hugh Smith, a director of Hambros Bank, and Mr. J. H. Hambro have joined the Board of the British and Continental Banking Company.

A tram survey has been begun by the Eastern Bengal Railway for a new broad-gauge railway line to link up Syndria Ghat with the -alukhali-Bhateapara Railway.

The profit of the Anglo-Belgian Company of Egypt for the year ended July 31, 1929, was £4,000. It is proposed to pay a dividend of 6d. per share, less tax, to place to reserve £4,500, and to carry forward £1,157.

The Directors of the Imperial Bank of Persia have declared an interim dividend for the half-year ended September 20 last at 4s. per share, free of income tax, payable on and after December 16. The transfer books will be closed from December 2 to December 14, both days inclusive.

The traffic receipts of the South Indian Railway Company for the week ended October 6 amounted to Rs.13,41,405, making the total from April 1 Rs.3,89,85,471, as compared with Rs.3,51,84,178 for the corresponding period of the previous twelve months.

The revenue from the various monopolies in Yugoslavia in the first half of the current year amounted to 992.8 million dinars, as against Budget estimates of 981.3 millions. All the receipts, with the exception of those from petroleum, showed a considerable surplus over the estimates.

The South Indian Railway has given contracts in connexion with their Madras electrification scheme to Siemens Bros. and Co., Woolwich, for overhead transmission lines, including supports, insulators, conductors, and fittings, and to Siemens-Schuckert, Germany, for overhead contact and distribution lines.

The directors of the Calcutta Electric Supply Corporation have decided to construct a tunnel under the Hooghly River in order to be able to supply the southern part of the company's licence area on the Howrah side of the river. A contract has accordingly been placed for the construction of a tunnel. Mr. H. H. Dalrymple-Hay is consulting engineer, and the contractors are John Cochrane and Sons, of 39, Victoria Street, Westminster. It is estimated that the work should be completed by mid-summer, 1931.

The Council of the Ottoman Debt announces that the documents of title for arrears of the debt (coupons, scrip, and drawn bonds, with the exception of lottery bonds) can now be deposited for exchange into bonds representing the arrears. A full description of the documents to be exchanged is given on the listing forms. These can be obtained at the Council of Foreign Bondholders, 17, Moorgate, E.C.2, for series "A" (loans payable in sterling), and at the Ottoman Bank, coupon office, 123, Old Broad Street, E.C.2, for series "A," "B," and "C" (loans payable either in French francs or sterling). British income-tax at the rate of 20 per cent. will be deducted from the nominal amount of the converted interest, unless the relative documents of title are accompanied by an affidavit for exemption.

At the first meeting of the Alexandria and Cairo committees of the British Chamber of Commerce of Egypt held after the resignation of Lord Lloyd of Dolobran from the post of High Commissioner for Egypt the following resolution was passed:—"The two committees of the British Chamber of Commerce of Egypt unanimously record their very sincere regret at the retirement of Lord Lloyd of Dolobran from the post of High Commissioner for Egypt. They consider that during his tenure of office Lord Lloyd in an exceptional manner and in extremely difficult circumstances notably upheld the dignity and prestige of the British Empire, and, in addition to furthering the maintenance of good order and general prosperity of the country, unsparingly devoted himself to the advancement of British interests in Egypt, especially in the domains of commerce and education. So great, indeed, was his energy and zeal that he neglected no opportunity of acquainting himself with the needs and activities of the various British communities domiciled in Egypt, and whenever possible of initiating or supporting any scheme for their benefit. In particular they wish to place on record their very real appreciation of Lord Lloyd's great and never-failing interest in the work of this Chamber, and the fact that while he held the post of High Commissioner very considerable expansion both in membership and, they believe, useful activity was achieved, due in a great measure to his constant encouragement and untiring enthusiasm. The inspiration of his example has had far-reaching effects, and will long be remembered by the members of the British Community in Egypt."

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 20 :—

Egyptian Futures.

Sakel Contract.—Only moderate fluctuations have been experienced in this market during the past week, and the more settled tendency in outside commodities has had a beneficial effect on the undertone, which has shown a decidedly firmer tendency than that recently prevailing. This in turn has reflected favourably on the trade outlook, and, as a result, more business has transpired in fine yarns, with a corresponding increase in the offtake for actual. In view of the fact that spinners have the assurance of very ample supplies, there is nothing in the present situation to warrant the belief that the trade are going to stock themselves with cotton for distant delivery. At the same time, there is no doubt that Sakels are regaining their old-time popularity with consumers, and, provided premiums remain at their present reasonable figure, a consistent demand can be looked for with some degree of confidence. In contrast to previous occasions the action of the Egyptian Government to stabilise prices has not been adversely criticised locally, the general view holding that the stipulated basis is a reasonable one. Generally speaking, interference with the normal laws of supply and demand reacts in rather a disconcerting manner; in the present case, everything depends on a steady demand and the maintenance of values in other varieties. Straddle differences, either against Alexandria or America, show very little change on the week; near cotton in our own market continues to hold well, the current position still running at a premium over January. We are still of the opinion that price movements will be restricted; on the one hand the potential buying power of the Government will prevent anything but a moderate decline, whilst consolidation of any upward movement can hardly be anticipated until more cotton has passed into trade channels.

Upper Contract.—Only a moderate amount of business has transpired in this market during the past week, and, mainly as a result of a firming up in American values, prices on the week show advances of 25 to 17 points for near and 20 to 29 points for distant positions since we last wrote. Trade interest has been rather restricted, and spinners have only been interested in cotton for close delivery. The current position has shown strength, and has closed up further with later deliveries. The market has latterly developed a healthier undertone, but it appears too early yet to anticipate any sustained appreciation in values.

Egyptian Spot.

More interest has been displayed in actual cotton during the past week, and, although much of the inquiry has failed to develop, prices all round have hardened by some 30 points. There is a general feeling of relief that the decline in cotton has been stayed, for the time being at all events, but confidence in prices is slow to return after the big drop we have experienced, and in view of the obviously unsettled conditions which still prevail in many of the world's biggest markets. The best feature, at the moment, seems to be the healthier conditions ruling up country. This is the quarter whence the first improvement should come, and, with prices at the present reasonable levels, it augurs well for the future.

Sakels have been in improved request, but it has been chiefly the medium and lower qualities which have benefited.

Uppers.—The usual demand for cotton 10 off to 10 on has continued, but buyers have been more cautious, and this week rather more interest has been shown in the better grades. "Off" and "inferior" cotton has frequently figured on the inquiry board.

Pilion has been in only moderate request again.

Nahda, Maarad, White, and Fuadi, etc.—More business has taken place at somewhat irregular prices.

Tokar Sakel.—Very few sales have been reported, and the demand, on the whole, remains very dead.

Sudan Sakel.—Slightly more business has resulted. Prices have remained firm.

C.i.f. business.—On the whole, business has been disappointing in this section, but we believe that an improvement is not far away. Last week's forwardings reached the large figures of 12,090 bales Sakel and 2,808 bales Sudan Sakel.

Spot Sales.—These have been estimated at 1,700 bales Egyptian and 450 bales Sudan Sakel. Quotations of Sakel have been advanced 30 points, those of Upper 20 points, and of Pilion 25 points. F.G.F. Sakel to-day, 15.10d. F.G.F. Upper to-day, 10.70d. F.G.F. Pilion to-day, 11.60d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report for the week ended November 14 :—Since our last report the futures market has been rather quiet and featureless. The week's summary of price movements is as follows :—Sakellaridis: November, 27.45 dollars, 0.32 dollars down; January, 28.07 dollars, 0.13 dollars down; March, 28.53 dollars, 0.07 dollars down; May, 28.00 dollars, unchanged; July, 29.12 dollars, 1.13 dollars down; November N.C., 20.05 dollars, unchanged. Ashmouni: December, 19.27 dollars, 0.28 dollars down; February, 19.65 dollars, 0.07 dollars down; April, 19.88 dollars, 0.14 dollars down; June, 20.17 dollars, 0.14 dollars down; October N.C., 20.50 dollars, 0.21 dollars down.

Company Meeting.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

The seventy-first ordinary general meeting of the Bengal-Nagpur Railway Company, Ltd., was held on November 21 at the company's offices, Gresham House, London, E.C. Mr. Robert Miller (chairman of the company) presided.

The Secretary, Accountant, and Registrar (Mr. R. C. F. Volkers, C.I.E.) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said :—The gross earnings have increased to Rs.918.56 lakhs and are the highest on record. Passenger traffic was steady and the numbers carried were higher than in any previous year. The slight falling off in receipts is unimportant, as it may safely be assumed that the facility for travel now made possible by the introduction of third class week-end return tickets at reduced fares will gradually be more and more appreciated by the public and result in increased revenue to the railway. As regards goods traffic, although the tonnage of coal carried failed by a small percentage to reach the peak figure of the previous year, the earnings were better by some Rs.18½ lakhs. This is the net result of a decline in receipts from short-distance traffic and a considerable increase in receipts from long-distance traffic in the shape of coal carried for foreign railways, due, doubtless, to a better appreciation of the wastage inherent in the transportation of coal by sea and also to the hardening of sea freights in recent years. As regards the decrease under general merchandise, it will be seen from the report of the Directors that the majority of the variations from last year's figures are attributable to the rise and fall in demand created by the excess or shortage of crops, as the case may be, in our own or other areas respectively, as the result of excessive or deficient rainfall. The large decreases under the heads foreign railway material, limestone, and manganese ore fall under a different category. The first two resulted from the complete closure of the Tata Iron and Steel Works at Tatanagar for a period of four months, which automatically reduced the importation to the works of rail-borne raw material and the export from the works of finished articles such as rails, etc., under supply to foreign railways. Traffic to and from the Tata Iron and Steel Works was resumed on their reopening and has fully recovered from its temporary decline.

The falling off in the traffic from manganese ore arises out of economic causes, namely, the increasingly severe competition met with by Indian ore in the markets of the world, from ore produced in other countries, especially Russia. The railway is endeavouring to arrive at a suitable formula for lightening the freight on Indian ore to port of exportation; but railway freight is not the sole factor involved in cheapening the cost of Indian ore, and, if that ore should fail eventually to compete successfully with foreign ores, it will be due to causes which the railway alone is powerless to avert.

Working expenses have increased from Rs.561.50 lakhs to Rs.681.85 lakhs, or 21.43 per cent. The expenses of administration, maintenance, and working were normal, and the increase is due, almost entirely, to a full year's work on the three years' intensive programme of strengthening the track and bridges and placing on the line more powerful locomotives, in order to fit the railway to deal effectively and economically with the substantial additional traffic confidently expected in the near future. In the address given at last year's meeting of shareholders it was stated that this programme has the approval of Government, whose interests in the matter are identical with ours.

Although the direct result of this additional expenditure is the absence of surplus profits for division, a resolution will be put before the meeting to pay from the reserve to the holders of ordinary stock a dividend which, together with the guaranteed interest, will bring the return for the year on each £100 of ordinary stock up to the usual figure of £5.

As regards the future, the prospects are favourable. The first six months of the current year show an increase of Rs.25 lakhs in gross earnings, and, given a continuation of favourable conditions, there is a reasonable expectation that, after financing the second full year's instalment of the intensive programme of strengthening the line, there will be a margin of surplus profits to divide.

Though the practical application on the railway of the terms of the Washington Agreement and Geneva Convention, which have now become law, will place an additional burden on the revenues of the railway, confidence in its earning power continues unabated. Growing industrial activity and agricultural development are apparent all along the line and the traffic in minerals is increasing. The export of coal to China continues to go well. Active measures are being taken by a body associated with the coal industry to popularise the use of soft coke for domestic purposes and thus to make the inferior classes of coal, which at present are unable to bear the cost of trans-

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

The resolution was seconded by Sir Charles Stewart-Wilson, K.C.I.E., and unanimously adopted, and the proposed further dividend was approved.

We regret to announce the death on November 13, at the age of 70, of Mr. F. P. Archbold, Chairman of Watson and Youell. During his long connexion with Danube shipping business, Mr. Archbold never lost an opportunity of furthering Anglo-Roumanian interests, and his loss will be deeply regretted by numerous friends in Roumania, England, and elsewhere.

According to the official statistics the external trade of India for the six months, April 1 to September 30, 1929—the first half of the Indian official year—compares favourably with that of the corresponding period of each of the two years immediately preceding. Exports and re-exports aggregated nearly Rs. 160½ crores, against Rs. 162½ crores in 1928, and Rs. 155 crores in 1927. The value of the imports was almost the same as during the first half of 1928-29, namely, Rs. 121 crores: in 1927 it was rather more than Rs. 123 crores. The total visible balance of trade, in favour of India for the six months amounted to Rs. 27½ crores. This total is arrived at by combining the balances of transactions in (1) private merchandise, and (2) treasure on private account. For the six months April to September 1928 the corresponding total was nearly Rs. 26 crores, and for 1927 it was rather more than Rs. 17½ crores.

Bulgaria 4½ per Cent. Loan, 1909.—Coupons due December 1, 1929, may now be presented at the counting-house of Messrs. J. Henry Schroder and Co., 145, Leadenhall Street, E.C.3, between 11 and 2 o'clock.

Notes of the Week.

Marking Time in Egypt.

With less than three weeks to run before the General Election it is inevitable that the Egyptian Government should hesitate to expose itself to the charge of having committed the country to a vast public work which has been the subject of prolonged controversy, and accordingly the calling of tenders for the construction of the Gebel Aulia Dam has been once more postponed. It would seem as if a particularly malignant fate were dogging the inception of this important scheme, but Adly Pasha's Cabinet would clearly be presenting the next Government with a grudge against it, if it took action in the matter on the eve of the election. Unfortunately, the delay may cause the postponement of work on the Dam for a whole season, for it is unlikely that the new Parliament will settle the question without considerable discussion. The Dam has long been a matter of keen controversy between experts, while it has its political aspect in so far as it is a work to be carried out by the Egyptian Government in the Sudan. In the circumstances the further delay in calling for tenders may be regarded philosophically, as it is clearly better that a work of such vital importance to Egypt should be undertaken with some degree of unanimity than, when once begun, it should be subjected to interruption for political or technical reasons. Better fortune has attended the opening of the new Stadium at Alexandria, although it will have been a personal disappointment to King Fuad that his project for the first meeting of the Pan-African Games could not be carried into effect. These Games fell through, as it was found that not enough countries in Africa were in a position, financial or athletic, to compete in them. The opening ceremony, accordingly, on November 17 took the form of a Pan-Egyptian gathering, at which nearly seven thousand members of different sporting associations, European and Egyptian, were present, in addition to a vast concourse of onlookers of many nationalities. Egypt is largely indebted to King Fuad for its new Stadium, and in due course may expect to see it the venue of a meeting of the Olympic Games—a goal which, it is known, the King had in view when he helped the Alexandria Municipality to plan a Stadium of the present proportions.

Turkey and Russia.

The course of Russo-Turkish relations has provided the foreign observer with an interesting study ever since the foundation of the Turkish Republic. During the earlier days of the struggle for independence it seemed as if Turkey, setting her face for the time being against European friends, and forced to rely on Russian help, would prove no match for Soviet diplomacy and must in the end find that she had won independence only to surrender it to Russia. Those who looked for such a development, including possibly the Soviets themselves, were, however, quickly undeceived. Turkey's man of destiny proved well able to take care of himself and of his newly-formed Republic. Without resort to any action on which the Soviet Government could fasten as a cause for quarrel, he gradually freed the country from the danger of financial and economic dependence on Russia which had threatened it, until the two States faced one another on terms of perfect equality. From this point it has seemed as if the Soviets were anxious to take their revenge either by spreading Communist doctrines among Turks or by pressing home as far as they dare on Turkey their affected indifference to her fate or friendship. Often in difficult circumstances the Ankara Government has had to keep a leash on itself and still more on its followers. Particularly has this been the case during the last twelve months, when on the strength of a trade agreement between the two countries the Turks have tried to push their trade in Russia, only to find their agents subjected to intolerable treatment and their goods to confiscation. The Turkish Government still kept its head, however, and now at last Russia has been brought to sign a *modus vivendi* for six months, which places the Turkish export trade under the ægis of the national banks, which will presumably be exempt from the sharp practices at Soviet hands to which the ordinary Turkish exporter was subjected. For the sake of Turkish trade it is to be hoped that the new arrangement will be found to work satisfactorily.

Palestine: The Voice of Conciliation.

To judge by the comments which we made last week upon the desirability of a fresh and unofficial attempt between Arabs and Jews to arrive at some understanding, the ground needs intensive cultivation before any seeds of reconciliation can ripen in it. One has to listen with

the sharpest ears, in fact, to hear the voice of compromise anywhere. Beside the general muteness, the wise counsel of such men as Professor Einstein, Dr. Ruppin, Dr. Magnes (Chancellor of the Hebrew University), and Dr. Hugo Bergman (of Tel-Aviv) is a still small voice indeed. So far as we know, no definite move has been made from the Arab side in the direction of a fresh appreciation of the situation. And if the outlook is discouraging from that quarter, what shall be said of Zionist organs of opinion, official and unofficial, that would represent the advice of such men as we have mentioned as springing, not from high motives of humanity, but from temerity, from a truckling and cringing spirit? The argument being used on both Arab and Jewish sides is, apparently, that the Report of the Palestine Commission of Inquiry must be made the bargaining counter. From the purely political or diplomatic point of view this argument may be sound. But we deplore its use, if only because it must tend to perpetuate the lack of friendship existing between two Semitic peoples. Supposing, for instance, that the Commission's Report is in the main adverse to the Arabs—is the Zionists' cause really advanced by subsequent whoops of delight and stiff-neckedness in relations with the Arabs? Supposing the Report comments unfavourably on the Zionists—will the Arabs be the more inclined to tolerate the new immigrants and all their doings? No: it is not until the Arab and the Jewish people in Palestine extricate themselves from this attitude of wishing to pile up a total of scoring points that real hopes of peace can be said to exist. "The Jews of Palestine," says the *New Palestine*, the official Zionist organ in America, "are willing to go half way to meet the Arabs." Well, let them prove their willingness now; and if there is no response from the Arabs, they will know better than they know now where the sympathies of the people of the Mandatory Power belong. We would fain believe, however, that at a "half-way house," the Arabs might not be found so unreasonable. It is certain, in any case, that arrogance and fear, however they be divided or shared between Arab and Zionist in Palestine, can never of themselves produce the understanding between the two people that is desired by the best minds on either side. And what are tactical advantages as compared with a settlement?

Straws in the Wind.

To the optimist the situation is not impossible, even though every other observer seems to think the Palestine problem is an insoluble one. There is something in the wind, though whether it will pass away with the wind we cannot say. The *Manchester Guardian*, for instance, last

week contained a most temperate leading article which emphasised the necessity of compromise. This Liberal organ, which, be it remembered, has constantly and, indeed, very splendidly upheld the Zionist ideal, said: "The right of the Arabs in Palestine is a right of long-continued occupation and overwhelming numerical superiority. That is as good a right as the other (the Jewish), and it must be protected. This introduces at once an element of compromise into the situation. If both rights are valid, sacrifices on both sides may be necessary if justice is to be done." Now the Arabs are very far from refusing to recognise the connexion of the Jewish people with Palestine: it is only upon the conditions of their entry that they show antagonism. Surely something constructive can be made out of their willingness in such recognition? Certain Zionists, we notice, have taken fright at the notion of reducing the political ambitions of the Jews in Palestine to such an extent that the land became only a "spiritual centre" for the Jews: the *Davar*, indeed, goes so far, in a closely worded article in its English Supplement of November 15, to suggest that this slogan of "Spiritual Zionism" is indulged in by enemies of the Jewish people. Is not what happened rather this: that whereas a few years ago all forms of Zionism were anathema to certain Arabs and Englishmen, it is now recognised that the Jewish community in Palestine is not only a local fact but also a world focus? Whether these "neo-Achad Haamists" are entirely disinterested in an unimportant matter, and in any case the solution of the Palestine problem is not one for dogmatism. What is quite certain is that, whether justifiably or not, it is the political ambitions of the Zionists in Palestine that have caused alarm among the Arabs. That alarm can be decreased, not by Government assurance, but by the Zionists' own conduct. Has not the time come for a more precise definition, in the interests of the Zionists themselves, of a "National Home?" Achad Haam's spiritual soul, it is said, cannot live without a political body. Admit that; but of what dimensions is that body to be? Could not Zionists themselves help to clarify the issue here? Naturally the vagueness obtaining on that definition stimulates their hopes; but it also stimulates the Arabs' fears. And what real solution can there be until those fears are dissipated? That is the crux of the affair, besides which unchallengeable statistics, admitted benefits, official impartiality, and the rest of it, count but little.

Indian Universities.

Lord Irwin's speech at the Conference of Indian Universities reminds us that the origin of these Universities is to be traced in the Dispatch of his grandfather, Sir Charles Wood, in 1854. The Universities in the three Presidency towns were established in 1857: a sufficient indication that steps for the uplift and education of India did not begin with the Queen's Proclamation of 1858 and the assumption of government by the Crown. As Lord Irwin indicated, the chief functions of a University are the formation of character and the maintenance of a high standard of examination. Although the Viceroy was too tactful to say so, it is generally agreed that the Indian Universities have not achieved these objects. This has doubtless been largely because the model taken, unfortunately though perhaps inevitably, was the affiliating and examining London University, and not the unitary and teaching Universities of Oxford and Cambridge. There are now eighteen Universities in India, of which five may be said to be unitary and teaching, though their resemblance to Oxford and Cambridge is in other respects remote. Better equipment and a higher standard of teachers are required before real progress can be made, and before the degrees of Indian Universities can be recognised at Oxford and Cambridge. This refusal of recognition is undoubtedly a hardship to individual students: but it must be remembered that Oxford is equally intolerant of the degrees of the modern Universities of England; nor can it be reasonably maintained that the standard of the Indian Universities is yet so high as to demand recognition.

THURSDAY, DECEMBER 5, 1929.

A BUSINESS GOVERNMENT IN YUGOSLAVIA.

Eleven years ago, on December 1, 1918, the union of the Serbs, Croats and Slovenes was formally established, and the anniversary is appointed as a day of national celebration for Yugoslavia. This year it would appear that the official celebrations have evoked a more genuine response among the Yugoslav people as a whole than has been the case for many years. It is not that the idea of complete separation has been favoured by any single unit, but the internal dissensions of the Kingdom have left little room for appreciation of the advantages of union, still less for the making of full use of its potentialities. Last Sunday found the nation entering upon its twelfth month of enforced freedom from political squabbles. During this period it has experienced diverse emotions. The initial relief was quickly followed by a sullen resentment, when with a heavy hand the Dictatorship showed that it meant business; this feeling in turn gave way to an attitude of expectancy, from failure to understand the working of the Dictator's mind, and paved the way for considerable disappointment when, as it seemed, nothing happened apart from the consolidation of the Dictatorship. On October 3 the country was taken by surprise by the drastic change which abolished the thirty-three counties and over-centralisation of the Vidovdan Constitution, and divided Yugoslavia into ten administrative units, while holding out the promise of a more generous measure of local autonomy. The former emphasis on the three main divisions of the nation into Serbs, Croats and Slovenes was proscribed, and the Kingdom officially took the name of Yugoslavia. As, on January 6, when King Alexander abolished constitutional government, there was no doubt that his action was courageous; it remained to be seen whether it would prove wise as well. In the light of past history it was a bold move to expect the people on the word of command to think of themselves, and to act as Yugoslavs, not as Serbs or Croats or Slovenes; but the King shrewdly provided them at the same time with fresh interests and with a measure of the decentralisation that had been desired by all save the Serbs of Old Serbia. The event suggests—there has been no time for proof in the matter—that the King has been wise in his generation. The old political instincts, after being suppressed for nearly a year, have responded with alacrity to the calls of local government, and promise to find in the latter, at least temporarily, the safety-valve that was so badly needed.

Thus, it happens that this year's commemoration of the Day of Union has been celebrated under happier auspices than any of its immediate predecessors. A significant example has been set by the Zagreb municipality in registering its approval of the Government's measures and of the new administrative division of the State, and in condemning the action of those Croat leaders who, having fled abroad, have been conducting from foreign territories campaigns of vilification against their own country. Croatia has been under the Dictatorship the big question-mark, just as it was the crux of the political problem before January 6 of this year. The identification of all symptoms of unrest with Communist intrigue in the north or *komitaji* activity in the south did not entirely carry conviction, and a situation seemed to be establishing itself in

Croatia that was as difficult to explain abroad as it must have proved embarrassing to the authorities in Yugoslavia. If now, as is claimed, the latter have been able to run the trouble to earth and to satisfy themselves that it has been of quite narrow proportions, any overtures at this time from representatives of Croatia will be gratifying to the Government and should prove of value to the country as a whole. Although King Alexander has shown that he sets more store on his own interpretation of the Yugoslav character than on any tentative advice that foreign well-wishers or critics may tender him, there has been nothing in his Majesty's action to suggest that he has gone back on the spirit of his Proclamation of January 6 last, or, indeed, that he is not using it as the guiding principle of the Dictatorship. Parliamentary life, it must be supposed, remains, as he then declared it to be, his ideal, but the maintenance of the unity of the people and the safeguarding of the unity of the State were "the most imperative law" for him and for all. As parliamentary life, instead of developing and strengthening the feeling of national union, had provoked moral disorganisation and national dissension, he was constrained to seek new methods of work and to open new avenues in an effort to realise as quickly as possible the administration and organisation of the State in the manner best suited to the general interests of the people and the interests of the State. It is, therefore, logical that the capacity of the people to use local autonomy for the furthering of the interests of the country as a whole rather than the narrow interests of parties should be tested by the King before there is any serious talk of the restoration of constitutional government. The resolution of the Zagreb Municipal Council should mean that in the most critical part of the Kingdom the decision had at last been taken to offer whole-hearted co-operation to the Government in an attempt to make a success of King Alexander's policy for the eventual renewal of parliamentary institutions.

While it is true that the Yugoslavs cannot be expected to take kindly to an indefinite suspension of constitutional government, their experience in the past will have brought home to them the folly of allowing the fetish of party politics to prejudice the real interests of the State. Helped by a bountiful harvest, the Dictatorship has been able to offer the people openings for their activities in various directions other than political quarrels and intrigues. Even when important legislation was submitted to Parliament under former régimes it was problematical whether any Government would last long enough to carry it through, and it could be regarded as certain that there would be no real effort to carry it into practice, unless officials found in it a prospect of personal advantage. During the current year many important measures have been put into execution. Special attention has been paid to the improvement of agriculture; the Privileged Agrarian Bank has been brought into existence and should materially improve the lot of the peasants by affording them facilities for agricultural loans at a reasonable rate of interest; the Law for the Encouragement of Agriculture, promulgated last August, has initiated an attempt to place the care of agriculture on a scientific basis and to co-ordinate the work that had previously been entrusted to, but had been neglected by, three different authorities. Not the least useful feature of the new administrative system is that it brings the people into closer touch with the Administration, and abolishes the former anomaly of the reference of the smallest matters to Belgrade for decision, with all the attendant encouragement given to the bribery of official and unofficial middlemen. Increased attention, moreover, is being paid by foreign capital to Yugoslavia, and during the present year there has been a marked expansion of the number of business enterprises in which British financial interests are represented. It is to be hoped, therefore, that the statesmanship of which the new régime has given evidence will be loyally supported by national patience and co-operation until such time as Yugoslavia can return to normal constitutional procedure without impairing the economic development of the country.

*The Near and Middle East

From Our Own Correspondents.

IRAQ.

Baghdad, November 13.

Parliament.

The King opened Parliament, with the customary ceremony, on November 2. The Speech from the Throne began with the announcement that the aspirations of Iraq were now about to be realised, Great Britain having agreed to support her candidature for admission to the League of Nations in 1932 without restriction or proviso. The King then paid a tribute to the late Sir Gilbert Clayton as a "faithful medium in expressing Iraq's aspirations," and spoke of his death as a calamity for the country. He referred with pleasure to Iraq's friendly relations with neighbouring countries, notably Trans-Jordan, with which it is hoped soon to conclude a Treaty of Amity, and Persia, with which Iraq has been on much more friendly terms since the signing of the Agreement of August, 1929. At home, agriculture had improved, though it had suffered from lack of demand and fall in prices, as well as from natural pests. Peace and order were well maintained and had been undisturbed throughout the year. The Government had now to deal with proposals for the new treaty on a basis of complete independence, and to prepare to shoulder the full responsibility of governing the country.

The Budget would aim, the Speech continued, at such economies in the expenditure of the State as would provide money for useful schemes of development. A National Defence draft law, enabling the Government to undertake the sole and independent defence of its own frontiers, would shortly be submitted to Parliament, as well as a number of other important laws, such as those dealing with the Civil Service and with the Penal Code. The establishment of national and agricultural banks, the foundation of an Iraq coinage, and the furtherance of education were among other important questions to be dealt with by Parliament. The Speech ended with a prayer for divine guidance.

After the King's departure from the House, the ex-Minister of Education moved that before electing the President and Vice-President, the Chamber of Deputies should observe a ten minutes' silence, as a protest against the Balfour Declaration and in sympathy with the Arabs of Palestine. It was pointed out that no other business could be dealt with before the elections, and these were accordingly proceeded with, Taufiq Beg Suwaidi being chosen as President and Jamil Pasha ar Rawi Vice-President of the Chamber. A five minutes' silence was then observed, and a proposal was carried that the House should address to the League of Nations, the British Cabinet, and the Inquiry Commission in Palestine telegraphic protests against the Balfour Declaration. A silence of five minutes was similarly observed in the Senate.

Suggestions of Reform.

Reform is in the air, and the new Government is simmering with proposals for changes in administration. Unfortunately, our politicians are only too ready to assume that progress and change are synonymous; none the less, the young State of Iraq is entering on a deeply interesting and important stage of its development, and all its friends rejoice that so wise and experienced a patriot as Sir Abdul Muhsin Beg as Saadun is now in charge of its destinies.

It has been suggested that the draft Anglo-Egyptian Treaty should serve as a model for the new treaty to be concluded with Great Britain after Iraq's admission to the League of Nations. At a meeting of the Progressive Party, Sir Abdul Muhsin pointed out the need, if this suggestion is adopted, of bearing in mind the great differences—geographical, economic, and political—between Egypt and this country. He then referred to the inclusion in his Cabinet, as Minister of Finance Minister, of Yasin Pasha al Hashimi, the "live wire" of the People's Party; the Prime Minister explained that his Government aimed at serving the best interests of the nation, irrespective of party differences. A vote in favour of Yasin Pasha's appointment was passed.

Several sweeping reforms have been introduced by Naji Beg Suwaidi, the new Minister of Interior. One is the withdrawal of all British Administrative Inspectors from the provinces, with the object of giving to Iraqis a greater share in the internal administration of the country. It is proposed that the Inspectors be stationed in Baghdad, and be sent from time to time into the districts on tours purely of inspection. This very considerable change is still under discussion. Three new directorates, those of Interior, the Municipalities, and the Tribes, are to be inaugurated, working independently under the Minister. Changes in the municipal system are also contemplated; mayors of small towns are to be appointed by Government instead of elected by their fellow-townsmen as hitherto, and are to be assisted by councils similarly appointed. (This will have the effect of removing illiterate town-councillors, but can scarcely be considered a democratic move on the part of their not always more literate representatives in Parliament).

The abolition or amendment of the Tribal Penal Law, which differentiates between townsman and tribesman in punishing breaches of the law, is also under consideration in Parliament.

Relations with Turkey.

Raouf Beg Chadirchi is to succeed the late Subih Beg Nashat as Envoy Extraordinary and Minister Plenipotentiary at Angora, and is expected to take up his appointment at once. Raouf Beg was at one time Minister of Finance, and has held several other important appointments, but of late years has abandoned politics for the practice of his profession as one of Baghdad's best-known and most successful lawyers.

Very cordial messages were exchanged between King Faisal and Mustapha Kemal Pasha on the recent anniversary of the inauguration of the Turkish Republic.

Visit of the Amir Abdullah.

The Amir Abdullah of Trans-Jordan has just left Baghdad after a visit to his brother, King Faisal. His Highness made a tour of the Holy Places of Iraq and was enthusiastically received by the faithful, particularly at Najaf, where pan-Arab feeling was exuberant. At Baghdad the Amir visited the Al al Bait University, inspecting the higher theological classes; he also inspected units of the Iraq Army, and of the Baghdad Boy Scouts. The order of the Two Rivers, First Class, has been conferred by King Faisal upon his brother.

The Air Mail.

The tragic loss of the Imperial Airways liner, *City of Rome*, in the Gulf of Genoa, followed in the very next week by delays of both the outgoing and incoming aeroplanes, has sadly blotted the clean sheet of the Company as a rapid, reliable, and almost incredibly punctual carrier of mails. The passengers in the *City of Alexandria*, which reached Baghdad last Saturday (instead of, as usual, on Thursday) had thrilling tales to tell of the aeroplane's taking refuge from a Mediterranean gale in the harbour of Mersa Matruh and damaging her floats when crossing the bar. Some of the mail bags had been immersed in sea water, but fortunately very few letters were damaged, and the mail was distributed in Baghdad late on Saturday.

General News.

Armistice Day was celebrated here by a short service at the British War Graves Cemetery, when the two minutes' Silence was observed and wreaths were laid on the Stone of Remembrance. The Amir Ghazi and the Acting High Commissioner were present. Flanders poppies were sold in aid of Earl Haig's Fund at the British Club.

The rank of the German Consul in Baghdad, Herr Litten, has been raised to that of *Chargé d'Affaires*.

The construction of the new canal which is to water the Latafiyah Estates is proceeding satisfactorily, the work being carried out by the Iraq Department of Irrigation at the expense of the company. The first crop will probably be planted next autumn, and cotton will be sown in the following spring. A very large number of shares in this

undertaking, it may be remarked, are held by Iraqis, and the number is increasing.

Last week was witnessed the departure, at the end of two years' service in Iraq, of some 1,500 members of the Royal Air Force, whose places are to be taken by drafts from home.

A Baghdad poet, who has published anti-religious writings in the local Press, offending "the feelings of Muslims throughout the world," is to be proceeded against by the Ministry of Interior.

November 16.

The Prime Minister's Death.

This letter was sealed and ready for post when the terrible news of the Prime Minister's death by suicide plunged all Baghdad into gloom. The loss is an irreparable one; not one of her national leaders could Iraq so ill-afford. The influence of Sir Abdul Muhsin Beg as Saadun, since first he took office as Minister of Interior in 1923, has been consistently on the side of moderation, justice and proportion. An ardent patriot and Nationalist, he was yet enabled by his breadth of mind to look beyond the frontiers of Iraq and see her in relation to the world. Perhaps none of his many friends and admirers, British and Iraqi, realised how great had been the strain of the last few months, when to him fell the thankless task of "putting on the brake," of opposing logic and reason to whirlwind enthusiasm, while yet sympathising fully with all the highest hopes of his country. But his last letter makes it clear that what finally drove him to despair, was not so much the hostility of his opponents—for he was a strong man—as the cravenness of his own followers, who were passive when they should have supported him by word and deed in his opposition to the extremists.

The Prime Minister attended a meeting of the Progressive (his own) Party on Wednesday afternoon, and on returning home wrote a letter to his eldest son, who is a student of engineering at Birmingham. He then walked on to the verandah of his riverside house, and shot himself through the heart. The letter, which was written in Turkish, may speak for itself:—

To my dear son, on whom I rely.

Forgive me for the crime I am committing against myself. The truth is that I am heart and soul weary of this life. I have found in it no pleasure, no satisfaction, and no honour. The nation expects service, but the British do not agree to our demands.

I have never had sufficient support. The Iraqi people, who are demanding independence, are weak, powerless, and very far from independence, yet they have been unable to appreciate the advice given them by men of honour like myself.

They have thought me a traitor to my country and a servant of the British. What a great calamity! Be sure that I have always been sincere, and prepared to endure any sacrifice for the sake of my country. I have suffered with forbearance all possible insults and contempt. I have endured this for the sake of the sacred land where my fathers and grandfathers lived in grandeur.

My son, my last counsel to you is that you should be kind to your younger brothers who will now become fatherless; respect your mother, and be loyal to your country; secondly, that you should remain absolutely loyal to King Faisal and his offspring.

Forgive me, O my son!

ABDUL MUHSIN SAADUN.

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under:—

1st Class throughout.	}	A. 10 days sea-passage & 18 days stay in Egypt...L. Stg.: 72.10.
		B. 10 days sea-passage & 25 days stay in Egypt...L. Stg.: 81.10.

A Supplement of L. Stg. 5 will be charged for November departures.

EGYPT.

Cairo, November 23.

The Alexandria Stadium.

The Stadium, which the Alexandria Municipality has erected, was inaugurated on Sunday last by King Fuad. It was a wonderful gathering, illustrating the cosmopolitan character of the population of Egypt, and particularly of her commercial capital. Over 22,000 spectators—almost the capacity of the Stadium, which has been designed to hold 25,000—were there, and practically every nationality was represented. The inaugural ceremony opened with a march past of the sporting clubs of Egypt and of the schools of Alexandria. Some seven thousand participated, each section with its banners, and conspicuous among the schools were Victoria College and the New British Boys' School. Afterwards there were Olympic sporting events, and a football match between Cairo and Alexandria, won by the latter (the King presenting to the captain of the winning team a magnificent cup), and the show ended with a gymkhana by the Alexandria mounted police bearing lanterns. As dusk had fallen, this last was very effective.

It is to be hoped that the Royal act will end the run of ill-luck that has dogged the Stadium ever since its inception. In the first place there was considerable trouble—even legal action—in connexion with the great lottery arranged by the Municipality for raising the £100,000 required to meet the balance of the cost of construction, which has amounted in all to £130,000. Then when the Stadium had been completed, the "African Games," which were intended to constitute the inauguration, had to be abandoned owing to certain international difficulties. But last Sunday at the Stadium, which has been constructed on the site of the ancient Olympic Stadium of the Ptolemies and possesses one of the finest racing tracks in the world, various nationalities were united in friendly rivalry, and there is no reason why it should not constitute the centre around which the sporting enterprise of the country could revolve, and so by the encouragement it affords and the good relations which this should engender among the many communities that go to make up this country's cosmopolitan population, justify those who conceived it.

Egyptian Diplomatic Posts.

The decree retiring Sadek Pasha Henein and Mahmoud Samy Pasha, respectively Egyptian Ministers at Rome and Washington, has come as no surprise. There is no political significance in this decision. It has long been mooted, and is due solely to considerations of a nature personal to the two men concerned. Before he went to Rome Sadek Henein Pasha was Under-Secretary of State for Finance, and he is an authority on economic and

financial questions. Mahmoud Samy Pasha, who is an engineer, has held the posts of Under-Secretary for Public Works and Communications. Both are still comparatively young men, and will, no doubt, find occupation in their own country in the spheres for which their capacity and training really fit them. It is understood that Sadek Wahba Pasha, son of the aged ex-Premier Yussef Wahba Pasha, who recently tendered his resignation of the post of Minister at Brussels, will be appointed to Rome, and that he will be succeeded by Sesostri Bey Sidarouss, who has only just taken up his appointment at Athens after having been for so long *Chargé d'Affaires* in London.

It is expected that there will very shortly be a series of transfers and new nominations to the Legations and Consulates, but no decision has been taken with regard to Washington or London. In connexion with London, there is much talk of Mr. William Makram Ebeid's being nominated, in view of the work he was able to do for the *Wafd* during his recent visits to England, but nothing has yet been decided, and it is not improbable that London will be left vacant for a further long period owing to the difficulty of finding anyone suitable who can be spared from Egypt.

Al Azhar.

The scheme for the reform of religious education in general, and of Al Azhar in particular, looks like being still-born. The Rector, Shaikh Mustapha El Maraghi, resigned, owing, it said, to some objection on the part of the Palace to the delay in promulgating the decree which has remained at the Palace, and his place has been filled by a man, Shaikh El Ahmadi, of the Tanta seminary, who although an excellent *Alim*, is not inclined towards modern ideas, and so is not likely to press for the execution of his predecessor's scheme.

Chrysanthemum Show.

The annual Chrysanthemum Show of the Royal Horticultural Society, held last week-end in the grounds of the Royal Horticultural Society, was a great success. It was opened by the Minister of Agriculture, Wassef Simaika Pasha, and was visited later in the day by Lady Lorraine. The exhibition, which included flowers and plants, revealed what great progress horticulture is making in this country.

BULGARIA.

Sofia, November 20.

Political Brigandage.

There is in existence, among the Agraro-Communists who have emigrated into Yugoslavia, a certain number of bandits who frequently cross the frontier into Bulgaria in order to terrorise the population and to upset the political situation and the régime established after the anti-Agrarian *Coup d'état* of June 9, 1923.

The most dangerous of these bandits unquestionably is the notorious Dotcho Ouzounoff. So far the Bulgarian police have been unable, despite organised search parties, to capture him. On November 9 this brigand's band, which had at first operated in Central Bulgaria, appeared in western Bulgaria and attacked the train from Barkovitz to Ferdinandovo. Pillage of this local train, in which there were only a few passengers, for the most

part middle-class people, was not much gain to the bandits, though it is not material profit that they are really after.

This affair caused much alarm in Bulgaria. Everyone was scandalised at the ineptitude of the police, and suggested diplomatic representations in Belgrade, as there exists an extradition agreement by which the Yugoslavs ought to hand over these bandits to the Bulgarians.

New Serbo-Bulgarian Negotiations.

In this atmosphere of suspicion, even of hostility, a new Serbo-Bulgarian conference began on November 16. This conference at Sofia is specially engaged to find a solution of the problems which the Bulgarian delegation at Pirot formerly refused to discuss, because they were not included in their terms of reference and they had no relevant instructions. They concern the liquidation of bilateral properties and the establishment of a neutral zone along the frontier between Bulgaria and Yugoslavia. On the first point, Bulgaria has promised partly to liquidate the situation where the proprietors themselves would consent to the change; but the Yugoslavs insist on a radical liquidation by way of compulsory expropriation—which would result in de-populating these regions and of "Serbising" them, while the present inhabitants of Bulgaria would become a charge on the Bulgarian Government. Such a solution the Bulgarians absolutely reject. The second problem would appear to be not less insoluble. The Yugoslavs wish for a forbidden zone of ten kilometres in which only the inhabitants and the troops and functionaries could move. To this the Bulgarians reply that such a régime would completely paralyse the economic life of all the localities in the zone and even this bordering on it. They propose, consequently, either a neutral zone such as that established between Yugoslavia and Greece, where the population is only required to have personal cards of identity to facilitate control by the police, or a "dead" zone one kilometre wide, five hundred metres on either side.

The conference has had several sittings, and it will be seen how far apart are the rival points of view.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 14.

The House of Commons Debate.

Attention here, this week, has naturally been concentrated on the debates in the two Houses of Parliament, and mainly on the debate in the House of Commons as the more important of the two. The speech of the Secretary of State for India is felt to have been the weakest, and has deepened the impression that I spoke of last week—that there are not brains enough behind the present handling of Indian affairs. Consider, people are saying here, such a thing as the line the Secretary of State took in dealing with Mr. Lloyd George's attack. It might be dismissed, he argued, for Mr. Lloyd George speaks for but a handful in the House. What does it matter how many or how few a man speaks for, if his points are good; if what he says is unanswerable? Mr. Lloyd George did make one unanswerable point; namely, that the Viceregal pronouncement had had a bad consequence, one irremediable; it had opened a way for the Indian leaders to demand the grant of Dominion Status immediately, or in the very near future. The Viceroy, if he was to say that the goal of British policy in India was the attainment by India of Dominion Status, should have been most careful to emphasise that in the opinion of the British Government there must be a period of transition; how long a one none can say.

Another weakness in the attitude of the Secretary of State is his thinking that the improvement in public feeling in India on the morrow of the pronouncement is

certain to endure and deepen. What if it does not endure? What if greater expectations have been aroused in the Indian leaders and the people than can be fulfilled? What if the delay should cause new distrust of the British Government to breed? What if there should be an irreconcilable difference of opinion between the Government of India and the Indian leaders as to who should be invited to the conference? Will the Government concede the point that the leaders have already tried to make that those of "Congress mentality" should be the strongest represented? What if the Government feel unable to grant the political amnesty that has been demanded, and if that should lead to exacerbation? What if the Round Table Conference, a body the choice of the personnel of which must be the British Government's, a body, then, that the British Government can be accused in India hereafter of having packed, declares its opinion that it will never be possible to grant India Dominion Status? That is the opinion of many of my Indian friends, judges and men of that calibre. If Indian public opinion at the end of 1931, and this is easily conceivable, is even worse than it was last September, what on earth will have been the profit in the temporary improvement of that opinion in November of 1929 and a few months that followed? That is what many of us are saying here.

Indian Expectations.

What expectations have been aroused in the Indians? This little story will show. An Indian, unusually burly for one of them, was walking on the platform of a railway station a few days ago. Approaching him were an Englishman and an Anglo-Indian, talking to each other. The Indian insisted on their making way for him, and, as he passed between the two, he jostled one of them with his shoulder, not roughly but enough to show his temper. Then he said, loud enough for all around to hear: "Dominion Status! I'm free!" What if the

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Round Table Conference should declare that the recently expressed opinion of the Nawab of Bhopal is such a one as must be acted upon? I quoted it in my letter of September 26. Let it be quoted again: "The fact is that the people's ignorance of modern and progressive ideas makes them an easy prey to bigoted conservatism, which leads to most deplorable communal strife, and creates a feeling of aversion in their minds to the initiation of elementary social and other reforms. Their opposition to their education, and their obstinacy against the adoption of modern medical, sanitary, and scientific methods, stand in the way of their political progress. You cannot alter these conditions by a wave of the magic wand. You need centuries of persistent and honest work. . . ." Do the Viceroy and the Secretary of State think that at the Round Table Conference the Nawab of Bhopal and those who share his opinions will hold their peace? They know they must not. They know how little political power should be given to people who are medieval enough in their ways of thinking not even to dare to enter a tailor's shop and order a suit of clothes without "consulting" their holy beads; who will turn back at the door, if the "oracle" is against their entering the shop.

Wise Words.

The wisest words, we think here (I speak, of course, of the few whose opinion is really valuable), were Sir John Simon's, and the restraint with which they were uttered—not a word too many—is held to have added to their value. I may not, by saying that, have prepared you to hear that we consider these to have been his most valuable words: "It is useless to pretend that the incidents leading to this debate have not for the time being added to our own difficulties, through no fault of our own, but in fact." (I may say that in the report of the speech in my newspaper two sentences are run into one. My correction may not be right.) Those, we do think, Sir John Simon's most valuable words. It is hoped that their lesson will be taken to heart at the India Office.

Unwise Words.

The worst thing that can be done is for any one in a prominent position to say words that might afterwards be quoted against him. A politician is apt, in the heat of his desire to score a point in debate, to say things with little consideration of all they commit him to. Mr. Lloyd George said a thing that has committed him far farther than he can have realised at the moment of speaking. It is a consolation to us to think that it was he, a greatly discredited politician, one not likely to return to office, or not for long, who spoke the words, and not such as Mr. Baldwin. The words in question are these (they were spoken in interruption of the Secretary of State, who had just said that the Viceroy's statement was "explicit and clear"): "If it were clear, it would be clear to these extraordinarily able men who are the Indian leaders." That should not have been said. What would now prevent the Indian leaders, if they had Mr. Lloyd George to negotiate with, from pointing out that he had admitted their possession of extraordinary ability? Does not their whole case for the grant of Dominion Status, now or at an early date, rest upon their sincere belief in their ability? Does not the whole of the opposition, in India itself, the opposition to the granting of any considerable measure of political power to the present leaders, rest upon an unshakable opinion as to the incapacity of the Indians for practical affairs? It is the opposition, mark you, of Indians such as the Nawab of Bhopal and many of my own Indian friends as much as of English officials and merchants.

No one should venture to say a word about the Indians and their capacity or incapacity for practical affairs, who has not worked for years amongst them. A Commissioner whom I met earlier this year told me that in his younger days he once took over charge of the chairmanship of a municipal board from an older civilian. The older man advised him never to oppose any scheme brought forward

by an Indian member of the board, however silly and impracticable it might appear to him, but to smile upon it and the proposer, and to suggest that a sub-committee be appointed, with the proposer as chairman, to work out the details. "If the scheme is a childish thing," the older official said, "and it is certain to be, the committee will one day drop the matter in silence, and you will hear no more of it." The most active Indian on that board, the man who brought forward most of the silly schemes, is now the leader of a party in the Legislative Assembly. He will be one of those, beyond a doubt, invited by the Prime Minister to the Round Table Conference.

THE LATE PRIME MINISTER OF NEPAL.

The death of His Highness Maharaja Chandra Shamsher Jang Bahadur, hereditary Prime Minister of Nepal, recalls the interesting series of articles contributed by Brigadier-General the Hon. C. G. Bruce to THE NEAR EAST AND INDIA last summer on the history, customs and national characteristics of the inhabitants of that somewhat mysterious and little-known country.

The office of Prime Minister, to which H.H. General Sir Chandra Shamsher Jang Bahadur succeeded in 1901, is held in perpetuity by a member of his family. The succession is determined by special rules, and involves powers that have made the Prime Minister, since the accession of the great Jang Bahadur about 1847, the virtual ruler of the country, while the Sovereign is little more than a figurehead.

The following extract from the article by General Bruce in the issue of May 9, describes in simple and impressive terms the notable services which the late Prime Minister rendered to the British Empire both during and after the Great War and the close and cordial relations which subsist between the two Governments:—

"From that date (the Mutiny, in the crushing of which Nepal's contingent of some 10,000 men took a most active and useful part) our relations with Nepal have never looked back. When the Great War broke out in 1914 the Maharaja who is now in power, H.H. Sir Chandra Shamsher Jang Bahadur, telegraphed to the Indian Government placing the whole power of the State at the disposal of the King-Emperor. We had at that time some 20 battalions of regular Gurkha troops and some eight battalions of military police and others already serving the Indian Government. During the War 33 battalions of regular troops were kept up to strength, the military police and others were also supplied with recruits, losses of all sorts were made good, and last, but not least, a contingent of some 12,000 Regular Nepali troops were sent down by the Nepal Government for the internal defence in India. Labour Corps were also raised and actually during the whole war some 200,000 men came from Nepal to assist the British Government, an almost inconceivable contribution from so small and poor a State, especially when it is considered that only a portion, possibly a quarter, of the inhabitants of the whole Nepal Kingdom, belong to what is known as military tribes.

"Over and above this, His Highness supplied the Indian Government with an enormous quantity of logs for use as sleepers in Mesopotamia, a most valuable contribution; also blankets, spices, and, as a personal gift from himself, some 36 machine-guns. Such has been the result of the good feeling established between the British Government and Nepal and such has been the result of the continual employment of these subjects of the Nepal State known to the Army as our Gurkha troops. It is a very remarkable instance, almost unique in history, of a State not tied by treaty to another, going to the utmost possible limits in self-sacrifice, both of men and goods, solely from the sympathy between the two. In 1921 a new and far more satisfactory treaty was completed and the British Resident in Nepal has, after 100 years, been raised to the status of Envoy. Nepal, however, has always kept itself to itself, and probably from its own point of view this is quite correct."

PERSONAL AND GENERAL

TO-DAY

December 5, 1929 (New Style).

November 22, 1929 (Old Style).

Rajab 3, 1348 A.H., of the Muslim Calendar.

Kislev 3, 5690, of the Jewish Calendar.

Major and Mrs. Philip Magor have left for Egypt, and will not return to England until April.

Shah Wali Khan, Afghan Minister-designate to Great Britain, left Kabul on December 2 for London.

Sir Harry Malet sailed from Tilbury on November 29 in the P. and O. s.s. Mantua for Bombay.

The Earl of Feversham has abandoned his visit to India, and will remain at Nawton Towers, Yorkshire.

Lord Ebury and the Hon. Elizabeth Grosvenor arrived in London on November 30 on their return from India.

The Hon. Anne Farrer left London on November 28 to join the Kaiser-i-Hind at Marseilles on her way to Bombay.

Lady Honour Guinness leaves 11, St. James's Square to-day, for Marseilles, where she will join the P. and O. s.s. Mantua for India. She will be away until the spring.

Sir Edwin Lutyens, R.A., left 13, Mansfield Street on November 28 for Marseilles, where he joined the P. and O. s.s. Kaiser-i-Hind for India. He will be away until the beginning of February.

Nobile Carlo Alberto Straneo, Secretary to the Italian Embassy in London, has been transferred to Teheran, where he will be temporarily in charge of the Italian Legation.

The Earl of Inchcape will open the annual bazaar of the Missions to Seamen, London Ladies' Association, which will take place at the Hyde Park Hotel on December 10, at 2.45.

Field-Marshal Viscount Allenby and Viscountess Allenby will leave London on December 12 for Marseilles, where they will join the Ranpura on the following day on their way to India.

Captain G. F. Gracey, who has for many years been General Secretary of the "Friends of Armenia," has been appointed as Overseas Delegate of the "Save the Children" Fund.

A dinner will be held at the Langbourn Club on Tuesday, December 10, when Mrs. Arthur McGrath, F.R.G.S. (Mrs. Rosita Forbes), will speak on "Modern Arabian Nights." Admiral Mark Kerr, R.N., C.B., M.V.O., has kindly consented to take the Chair.

The Prince of Wales received at Buckingham Palace on November 26, on behalf of the King, Lieut.-Colonel Nawab Sir Umar Hayat Khan (upon his appointment as a Member of the Council of the Secretary of State for India), who left for Bombay two days later on four months' leave of absence.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to **THE SECRETARY.**

A meeting will be held of the Near and Middle East Association on December 6, at 9.30, to hear M. Georges Cattaui, Secretary to the Royal Egyptian Legation, lecture upon "L'Egypte: Ses Traditions et sa Renaissance." Sir Thomas Arnold will preside. The meeting will take place, by kind permission of Lady Newnes, at 55, Prince's Gate, S.W.

The next three lectures to be given to the Royal Asiatic Society, 74, Grosvenor Street, W., will be delivered on December 12, December 16, and January 9, respectively, each at 4.30 p.m. They will be by Professor S. Langdon, on "Results of the excavations at Kish, 1928-29, by the Herbert Weld (for Oxford) and Field Museum Expedition"; by Mr. J. P. Mills, on "The Chittagong Hill Tracts"; and by Mr. H. A. R. Gibb, on "The Origins of Arabic Poetry." To the first two of these lectures there will be lantern illustrations.

THE CYPRUS DELEGATION.

Bishop Nicodemus of Kitium and Mr. Stavrinakis, who, with Mr. Zenon Rossides as Secretary, have constituted the Cyprus Delegation which came to England to support a Memorial for union with Greece, submitted by the Greek-speaking elected members of the Legislative Council, left London on November 27 on their return to Cyprus. The British Government's reply to the Memorialists, it is understood, will be transmitted through the Governor of Cyprus.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Conservatives and the Government.

If anything could make it appear to the outsider that the Conservative Party have made up their minds that the Socialist Party are destined for a longish period of office, it is the slackness with which Conservative members attend debates in the House. This slackness is generally of little consequence, from the point of view of disturbing the equanimity of the Government, but it does seem to mean that the Conservatives are not even prepared to perform the first duty of an Opposition.

Last week this listlessness was manifested in a remarkable way. Mr. Baldwin (who is most assiduous in attendance) and Mr. Lloyd George had agreed to oppose a certain provision of the Unemployment Insurance Bill. This provision was generally disliked; even Labour members had professed dislike of it. When it came to voting, however, the Liberal Party turned up in force, but fewer than half the Conservatives were there. The majority of the Ministerialists was about seventy.

It cannot be that the explanation was in the fact that the amendment came from a Liberal member. The matter was one of national importance; the Conservatives had had a three line whip to secure their attendance; and yet—the amendment failed.

As a matter of fact, the Conservatives are unconsciously playing the Liberals' game by this skipping of their duties. Already it is being claimed that by far the most effective opposition to the Government comes from the Liberals, who are earning not a little kudos in this way. The claim is not quite true—witness the excellent speeches of three young Conservative members last week on this Unemployment Insurance Bill, Major Elliot, Mr. W. S. Morrison, and Mr. Oliver Stanley—but it is quite true that, whether inevitably or not, Mr. Lloyd George has gained both personal and party prestige during the last few weeks.

Road Traffic.

It is not long since I commented upon the recommendations of the last Royal Commission on Transport, and already, last week, a Road Traffic Bill has been introduced to give effect to these recommendations. To-day, it is calculated, there are over two and a half million motor-vehicles on the roads, and the number increases annually by nearly a quarter of a million. Annually, also, over six

thousand people are killed in motor-accidents, and over a hundred and sixty thousand injured.

What, then, does the Road Traffic Bill? The most prominent feature of it, perhaps, is the abolition of the speed limit for the light, privately-owned car. This sounds perilous, but actually it is sound. For, by the imposition of very heavy penalties upon reckless driving, by the insistence on the physical fitness of the driver, and by other conditions attaching to the licence, a premium is put upon careful driving. Continental countries, I believe, have abandoned the speed limit—but they are generally quicker there to recognise a fact: I mean the fact that the speed limit is constantly ignored by motorists.

Of course there is much more in the Bill than this, but it is upon the proposed abolition of the speed limit that controversy is raging, and will rage in the two Houses of Parliament.

November Rains.

There is an old rhyme, which I have forgotten, to the effect that in England the wet and the dry on the whole balance themselves, and, sure enough, after the threatened drought of the Summer, have come the rains of November. In many parts of the country, indeed, floods are reported, and in practically all parts there are fields and stretches of road under water.

It was, in fact, a quite extraordinarily wet November. London had double the average amount received, Hertfordshire and Buckinghamshire had nearly eight inches each, while Devon, Cornwall, and Wales had between ten and fifteen inches. Rivers are in flood, and the distress in places is acute. Already the Thames has been declared in a state of flood, and those who live on its lower banks look anxiously at each tide.

November was a trying month, partly owing to its mildness and its unusual amount of sunshine. It is not common to complain of sunshine in England, but when it produces a muggy atmosphere the Englishman is apt to complain of anything. The month is, I suppose, generally the most unpopular of all.

The Water-Bus.

Our humourists have their serious uses. It may be doubted whether anyone could have raised such interest as is now being shown in the scheme to use the Thames for passenger-traffic—both as a means of relieving the congestion of the streets and for its own delightful sake—as has Mr. A. P. Herbert, who, though he is on the staff of *Punch*, is one of our worthiest humourists.

Mr. Herbert has many practical men on his side in his advocacy of a greater use of London's water-road, and his project has been so earnestly taken up that the London County Council, whose progressive impulse is not always overwhelming, is said seriously to be considering whether the relatively few thousands of pounds necessary for the construction of motor-buses, piers, and so on, could not be handsomely invested in this way.

The fact that in those dim days, long before the War, the L.C.C. steamboats on the Thames did not pay is held to be quite irrelevant. Those cumbersome affairs were unpunctual and shelterless, but we could easily change all that. In speed a water-bus could compare favourably in many places with a taxi; and how much more pleasant a way of travel! There really seems a good prospect of our having buses on the "London River" in a few years' time.

A DEBATE ON PALESTINE.

Under the auspices of the Union of Democratic Control a crowded meeting was held on November 25 at Livingstone Hall, Westminster, upon Palestine. Professor Brodetsky, of the Zionist Executive, was to have stated the Jewish case, and Jamal Beg al Husaini, Secretary of the Supreme Muslim Council, stated the Arab case. Mr. J. Wicksteed presided. The Zionist spokesman, however, was unable, at the last moment, to speak on a subject into which matter still *sub judice* might be introduced, and the Rev. Maurice Perlzweig, of the Liberal Synagogue and Hon. Secretary of the English Zionist Federation, took his place.

Mr. Perlzweig said the whole civilised world had followed with anxious interest certain recent events in Palestine, and all men and women of good will had been shocked by events on which he could make no comment while a Commission of Inquiry was trying to discover who was responsible for them. But nothing that had happened or could happen would deflect his people by a hair's breadth from the goal they had set before them. The Zionist movement, he said, was not a new movement: it began in 70 A.D. The Jews had never recognised the justice of the inevitability of the Destruction of the Temple. They had never accepted their defeat or admitted that anyone had the right to exclude them from the God that was sacred to them. Through eighteen centuries they had been determined to reconstitute the Jewish national home in Palestine. Zionism was part of their life.

He traced the modern Jewish colonisation of Palestine from the 'eighties, through the stimulus given to the movement during the War, when leaders of all the British parties expressed their sympathy with the Zionist ideal and the Balfour Declaration pledged the help of Britain. No other document in history had been so carefully considered before its promulgation or had received such wide international agreement before it became law as that which granted the Mandate to Great Britain.

"It is part and parcel of the fundamental policy of the Zionist movement," he declared, "that we must work in close co-operation and harmony with the Arab people." And he quoted a letter written in 1919 by Amir Faisal to a Jewish Professor at Harvard University—a letter from which, he added, the Zionists gained the impression that the Arab difficulty was overcome.

Describing the work of the Zionists in Palestine, Mr. Perlzweig said the Jews had poured fourteen million pounds into Palestine; every acre they owned had been bought in open market and paid for to the utmost reasonable limit. They had brought education into the country, and had built up a complete system from the kindergarten to the University. They had afforested the hills, drained the swamps, turned the wilderness into gardens, established a sanitary system, and built hospitals, and these benefits were shared by the Arab population. It was said that these things were paid for by the British taxpayer, but not a single penny had been drawn from anything but Jewish funds for the Jewish National Home. Palestine was now the only country in the Near East where finances could be regarded in a real sense as stable.

"We believe there is room in Palestine for both races," he said. "Sicily, a land equal in area to Palestine, supports three and a half million people, and in Palestine there are less than a million. We are anxious to work together, but two things are essential—moral disarmament and the mandate."

Jamal Beg al Husaini said that two main points must be stressed—first that the Arabs were not up against the Jews as Jews, but that they complained of the aggressive predominance of the political Zionist. Arabs had lived side by side with the Jews on amicable terms in Mesopotamia, Syria, and Egypt. There was no truth in the rumour spread by anti-Arabs that the Palestine Arabs were using anti-Zionism as an anti-British campaign. The Arabs had good faith in England, and hoped through her to obtain their rights.

Before the War the proportion of Jews to Arabs in Palestine was one to nine, and now it was one to six. He complained that while in Syria, Trans-Jordan, and Iraq local government existed under the Mandatory Power, in Palestine the Mandated and Mandatory Governments were the same. Under Turkish rule Palestine had enjoyed wide self-government, but under the Mandate the democratic system had been abolished. A sham Constitution had been offered in 1922 in which the Arabs found the utter frustration of the hopes they had entertained during the War.

The Zionist programme might be reduced to two points—immigration and lands. The Jews must come to Palestine and lands must be available for them. The Balfour Declaration said the migration of Jews must not be so great in volume as to exceed the capacity of the country to absorb the new arrivals. This condition, he said, was not being observed. He quoted official figures in proof of his assertion that the influx of Jews was excessive, and he claimed that Arabs suffered in consequence.

He told how a British Company formed to provide Jerusalem with electric light accepted the tender of Arab contractors. The Jews of Jerusalem, he said, made such a "row" about this, threatening to

boycott the Company unless it employed Jewish labour at a high rate of pay, that the Company began to employ Jewish workmen—to the exclusion of the Arabs.

Another complaint was that pressure was used to oblige Arab peasant proprietors to sell their land, and that much of the increase of crime during recent years was due to the dispossession and unemployment of these men.

Again, he said, great numbers of Arabs who had left their families and gone to America in the hope of becoming prosperous were now refused passports to Palestine and had to remain in exile. "You may imagine," he said, "the feelings of Arabs when they see emigrants coming in from Russia, Poland, and Roumania, and their own relatives who have been abroad are prohibited from entering."

THE ELUSIVE ACCIDENT TO THE ORIENT EXPRESS.

When the Orient Express was found to have been delayed on November 21 in the neighbourhood of Tzaribrod, the Yugoslav town near the Bulgarian frontier, it seems to have been considered necessary to fit the incident into the requirements of political propaganda. Accordingly, the first reports of the incident, emanating from Belgrade, represented the train as coming from Constantinople to Paris and as having been attacked between the Bulgarian frontier and Tzaribrod. Suitable details of casualties that did not occur were also given. Other reports pointed to the direction of the train being eastwards, but left the locality of the outrage vague. The first Bulgarian version was that the train was on its way from Belgrade to the Bulgarian frontier when bombs exploded under it at a point some five to seven kilometres west of Tzaribrod and consequently at least ten to twelve kilometres from the frontier. The question of responsibility for the outrage was left open, but it was supposed that bandits operating on Yugoslav territory were the perpetrators. There was, however, no evidence to show that the perpetrators were ever seen by anyone, still less that the direction subsequently taken by them was detected. The hour of the accident was given variously as 7.40 p.m. and 10 p.m.—in any case at a time calculated to lessen visibility for all but Balkan journalists domiciled in their respective capitals. Here the incident might be left, were it not for the fact that from Bulgaria now comes the statement that, according to the evidence of the train officials, there were no bandits and no attack. A truck belonging to a goods train, so runs this version, had left the rails, blocking the line, and the Orient Express had been obliged to make a long detour in order to continue its journey. Hence the delay in its arrival at Sofia. Belgrade can hardly be expected to take lying down this unwarrantable incursion of railway officials into journalistic preserves.

The Hon. P. W. M. Ramsay, the new British Minister to Greece, presented his credentials to the President on November 30.

Athens University was closed for a number of days last week in consequence of a violent outbreak by students, in which they destroyed furniture and pelted the police with various missiles.

A force sent by the Imam to arrest a new prophet at Haga, in the Yaman, who had gained many adherents by the "miracles" he performed, deserted and joined the prophet. The Imam last week dispatched another force.

Leaders of the Yugoslav *sokols* (athletic-political organisations on lines similar to those of the *sokols* which played a prominent part in Czechoslovak liberation) left last week for Belgrade to discuss the fusion of the *sokols*.

A Beyrout message states that the mode of maintaining security on the Turco-Syrian frontier has been settled as provided by the Angora protocol of June 29, and that a French delegation will shortly visit Angora in connexion with Customs details, railways, and sequestered property.

The Military Attachés of the Allied countries, led by the Yugoslav Minister in London, and accompanied by officers of the British Legion, placed a wreath of Flanders poppies on the Tomb of the Unknown Warrior in Westminster Abbey on November 28 on the occasion of the ninth anniversary of the founding of the F.I.D.A.C. (Federation of Allied-Ex-Service Men).

The New 'BP' from Crude to Car

The "BP" Depot

A complete network of distribution is at the service of the happy motorist to ensure that he can readily obtain the new "BP"—the better petrol. Storage installations situated on important waterways round the British coast, and depots at key points throughout the country, with an elaborate system of delivery by sea, rail and road, combine to provide the new "BP" wherever it is demanded—and that is everywhere.

There is an ever-growing demand for the new "BP." Motorists are delighted with its qualities, and with the new life it puts into their cars. Try it to-day and prove for yourself.

GREEK CURRANTS

Early Days.

It is difficult to be certain whether the ancient Greeks cultivated the currant as it is known to-day. It is conjectured, however, that the fine small grape with the thin skin, grown in Greece, and referred to by Pliny in the first century of the Christian era, could be none other than the currant. It is also surmised that, prior to this, the thick wine of the ancients must have been made from these grapes, which are known to have been preserved in their dried state. In the dark ages no mention of currants is recorded, and it is not until the fourteenth century that the real history of currants begins, although at this time a considerable trade with western Europe already existed. In England, where the first consignment of currants arrived in 1340, a licence was required for trading in the commodity. Many references to currants occur in the next two centuries under various names, such as "Raisins de Corauntz," "Reysins Corent," "Reysens of Corent," "Reysonsoff Corent," "Currens," "Corens," etc. It is not, however, until 1592, when an exclusive licence for trading with "The Great Turke," granted eleven years previously by Queen Elizabeth to Alderman Osborn, was transferred to the Levant Company, that we get the present-day spelling "of the small fruits called currants, being the Raisins of Corinth."

Habitat and Cultivation.

The "grape of Corinth" requires a particular combination of soil and sunshine and sea breeze to enable it to prosper. Consequently it grows in very few parts of the world. Until just before the War no success had been achieved in the many attempts to transplant it from its original home on the shores of the Gulf of Corinth and the Ægean Islands. Since the War Australia has been fairly successful, but Greece still holds a quasi-monopoly, as it grows about nine-tenths of the world's production, that is, about half a million tons, of the fresh currant grapes. Of these over three hundred thousand tons are dried by evaporation in the sun, the tonnage being thus reduced to eighty or ninety tons of dried fruit, which are exported, with the exception of about two thousand tons for home consumption. The remaining two hundred thousand tons are devoted to wine-making, the lowest grades being converted into industrial alcohol, a large percentage of which is used in Greek villages for lighting purposes. The area under cultivation amounts to about a hundred and fifty thousand acres.

Currants, as well as being delicious, are one of the healthiest of foods, having an exceedingly high calorific value. It is estimated, indeed, that one pound of currants has all the food value of over a pound and a half of perfectly cooked steak. In preparation currants undergo no chemical process; the grapes are dried solely by the heat of the sun. The currant grapes are naturally seedless, and they contain such a large percentage of sugar that, after they have been dried to the extent that only about twenty per cent. of water remains, the sugar acts as a natural preservative. The currants in their dried form contain between 65 and 75 per cent. of fruit or invert sugar, that is, sugar in its most valuable form; they also contain valuable mineral salts, which cause them to act as the necessary gentle laxative essential for good health.

In Greece, the currants grow along a narrow strip of coastline some two hundred miles in length, extending from near the eastern extremity of the southern shores of the Gulf of Corinth and down the western coast of the Peloponnese. This strip of land is generally only a few miles wide, rarely reaching double figures. Currants

also thrive on the islands of Zante (Zakynthos) and Cephallonia, where they still command sunny slopes caressed by sea breezes, and it is indicative of the peculiar requirements of currants that their quality is practically dependent on the district of the growth, so much so, in fact, that they are marketed under the denomination of their district of origin, as well as by the size of their grading.

The various growths in ascending scale of quality are as follows:—(a) Provincial (the south-western coast of the Peloponnese); (b) Pyrgos; (c) Amalias; (d) Patras; (e) Zante; Gulf and Panariti; (f) Vostizza. Experts in the trade can always differentiate the locality of origin at sight.

The Vicissitudes of the Industry.

The Greek currant industry is now organised by the Central Currant Office, which seems to have found a solution of the incessant crises that the industry had been undergoing for the previous fifty years as a result of over-production. The over-production had been caused in the first place by a law of *amorcellement*, which created small-holdings and a peasant-proprietor class. One effect of this had been a more intensive cultivation and a larger

SHADE AND SUN-DRYING.

crop from the same acreage. The resultant over-production was aggravated during the eighties of last century by a sudden and transient demand by France for wine-making purposes. The French vine had been attacked by phylloxera and half the crops ruined. The French wine-makers turned to currants for salvation, and within three years they imported over seventy thousand tons of currants in a single year. This did not last long, however, for the French vineyard owners imported American stock, immune from phylloxera, on which the French vines were then grafted. The French, however, discovered that the currants that had been hailed as saviours in the hour of need were now their worst enemy, for they offered an excellent substitute at a very much cheaper rate. They did not cease to agitate, therefore, until they had succeeded in inducing Parliament to impose ever-increasing customs duties that finally exceeded £30 a ton, while prohibitive regulations dealt with the sale of Greek currants in France. The sudden demand from France had reacted on the supply in Greece, and a considerable increase in the area of cultivation resulted. The Greek Government undertook to find a solution for the troubles.

of the currant industry arising from this state of affairs during 1895-99, and a special Currant Bank was created with the object of placing the fate of the problem in the hands of the growers themselves (1899-1904). Ultimately the enterprise was handed over to a new organisation, "The Privileged Company" (1905-1924). This company, in exchange for certain defined concessions, undertook to pay the duties to the State on currants, and to carry out the necessary publicity campaigns for increasing the consumption, and further to buy all surplus produce at previously fixed prices, so as to guarantee a minimum sale price to the growers. None of the above expedients obtained any measure of success, and Greece had her own experience of the inefficiency of Government interference in commercial enterprises. The Currant Bank came to an end, for although nominally in the hands of the growers, it was in point of fact in the hands of people having no direct interest, who were too prone to utilise it as a political organ. The Privileged Company achieved no greater success, for in certain instances its interests would seem to have been in direct opposition to the interests of the growers whom it was supposed to protect.

During the period of the existence of the "Privileged Company," however, an evolution was taking place in the industry which ultimately became the paramount factor in the situation at the time of the termination of the Privileged Company's charter in 1924. This factor was the marked development of the associations formed among the currant growers. These associations not only undertook commercial transactions, but also indulged in the co-operative wholesale supply of various prime requirements, as well as in the supply of credit. They, therefore, became associations of great financial importance and formed the basis of agricultural credit, upon which a new organisation with solid foundations could be created.

The Central Currant Office.

In 1925 the Central Currant Office was constituted, with a Council of thirteen members, appointed by the Ministries of Finance, National Economy and Agriculture (1 each), the National Bank of Greece and the Privileged Company of General Warehouses (2 jointly), the vine growers (1 member), the currant dealers (2 members), and the currant growers (5 members). The main functions of the new body, which did not exist, as its predecessors did, merely to absorb surplus production, are as follows:—

A VILLAGE IN THE CURRANT-GROWING DISTRICT.

1. The dissemination of information concerning the latest methods of cultivation, with the object of lowering the costs of cultivation and improving the quality. Towards this end the C.C.O. has established a central agricultural institution at Pyrgos for research work in all its aspects. This good work is backed by credit on the most favourable terms, so that the necessary implements and means of cultivation can be supplied to the growers and the latest methods be put into practice.

2. Systematic propaganda and advertising in the countries of consumption, as well as in potential consuming countries.

3. The rendering of effective service to the industry from the first stages of production up to the actual marketing. This includes systematising commercial supply and the organisation of export credit, etc.

4. The careful control of the output, according to the principles of the most successful cartels, so that the

SUN-DRYING OF CURRANTS.

industry is not subject to sudden and dangerous fluctuations.

In addition to the above functions the Central Currant Office gives unstinted support to the co-operative currant growers' associations, in the conviction that only through those bodies can it fulfil its programme, because the co-operative associations are the best channels for the education and equipment of the growers. These associations, which to-day number over nine hundred, contain over thirty thousand members, and it is reckoned that about half a million people in Greece depend directly for their livelihood on the currant industry.

Methods of Drying.

Perhaps one of the spheres in which the greatest progress has been achieved by the new organisation is in the drying process. Here are some of the new methods which have come into vogue and between them now constitute the universal practice. The currants may be dried: (1) on strips of paper 4 feet wide, rolls of which are purchased like wallpaper. This paper, in addition to preventing the earth from becoming mixed with the fruit, creates heat from underneath as well as from above; (2) on racks or trays with wooden or wire bottoms, which can be laid on the lawns for sun drying or piled upon each other for shade drying. Many of these trays have been provided to the growers through the credit system of the C.C.O. (3) By hanging the bunches on the vines themselves. This is not practised very much. (4) By hanging the bunches on wire frames in special shade-drying sheds. Another sphere of equal importance, where the Central Currant Office has done wonders, is in the realm of sanitary conditions. Regulations having the force of law have been issued dealing with the question of hygiene. All workers must now produce certificates of good health, issued by the competent authorities at regular defined intervals; all factories must have stone or cement flooring—to name two provisions that exemplify the new regulations. Finally, the Central Currant Office holds that it is not only necessary to supply merchandise of the best quality, but also to bring the merits of the products before the consumers in all countries by comprehensive advertising campaigns.

Some Currant Statistics.

The area devoted to currants in Greece is now carefully controlled. In 1921 it stood at 666,123 *stremmata* 166,531 acres. (1 *stremma* = a quarter acre, approxi-

ately); the high-water mark was reached in 1924 with 785,021 *stremmata*; in 1925 the area was 726,801, in 1926 it had fallen to 641,995, and in 1927 and 1928 was 614,819 and 617,953 *stremmata* respectively, and now stands more or less stabilised in the neighbourhood of these latter figures.

Of the 617,953 *stremmata*, or 154,490 acres, under the currant vine in 1928 the Peloponnese contributed 567,584 *stremmata*, the province of Achaia-and-Elis being responsible for 300,404, and Messenia for 215,188 *stremmata*. The total production in the Peloponnese amounted to 159,450 metric tons, Achaia-and-Elis contributing 75,659, and Messenia 54,465 tons. During the 1927-8 season Greece exported 181,126,830 Venetian pounds of currants (1 Venetian lb. = 1.05 lb. avoirdupois), of which Great Britain took 124,542,454 lb, the Netherlands and Germany being Greece's next best customers with 19,751,132 lb. and 17,658,794 lb. Ven. respectively.

The Currant Advertising Campaign.

The advertising campaign for currants started in September, 1926, and has thus now completed three years

YOUNG CURRANT VINES IN PYRGOS.

of its existence. It has been successful, or at least it has satisfied its organisers, which fact is after all the best criterion of its success, especially when satisfaction is well backed by statistics. The interesting fact of the campaign is that it has been conducted on educative rather than on reminder lines. The organisers came to the conclusion that the post-War demand for currants differed somewhat from that of pre-War times. The British housewife did not devote so much time as heretofore to home cooking and preferred to buy whenever economically possible goods ready-made and ready-cooked. In addition, therefore, to educating the housewife in the various uses of currants and trying to persuade her to buy as much and as often as possible from her grocer, the C.C.O. has

set out to persuade her to buy as many currant cakes, buns, scones, biscuits, etc., as possible, as well as to get the currant bread habit. In this connexion it was considered that the best propaganda was to provide her with currant commodities of such quality that, once tried, they would recommend themselves to the extent of creating a continued demand. This plan necessitated the creation of an organisation to secure that the proper education should be given for the attainment of such quality. A Technical Advisory Bakery Committee was formed, constituted out of the chief bakers of the country, all, with one exception, Past-Presidents of the National Association of Master Bakers, the one exception being one member who, having won over 4,500 prizes, medals and cups in bakery competitions, is considered as the Champion Baker of the World. This Committee, in conjunction with the advertising experts, has organised series of annual competitions in various currant goods throughout the country, and these have had an exceptional measure of success and strong support. It must be borne in mind that it is estimated that in England there are some thirty-three thousand bakers, no small number to influence. Yet the competitions have worked wonders, and quite recently the expert judges estimated that the poorest entries in many classes were to-day better than the prize-winning entries in the early competitions. This policy of education has, undoubtedly, been a wise one; for, although it was on the whole not one calculated to bring too quick results, it is one to bring results of a more permanent and enduring nature. From the above it must not be thought that the campaign has been confined to this direction; the educative campaign of competitions is merely a somewhat dominant keynote, which has had the appropriate backing of Press and poster campaigns, as well as the modern devices of advertising, such as film propaganda, the issue of specially written currant songs, etc., not to mention the issue of elaborate sales helps and retailers' propaganda. Over two million recipe books alone have been issued, and over thirty thousand retailers have been annually supplied with advertising matter, which they have in each case asked for themselves, either by letter, or at the various trade exhibitions throughout the country where the C.C.O. has participated.

The Greeks are to be congratulated on the efficient way in which they are now handling their currant trade. They have profited by the misfortunes arising from previous mistakes, with the result that the currant industry may to-day claim to be one of the most successful examples of rationalisation in industry.

The Dried Fruit Industry - - - of Smyrna - - -

Smyrna is probably best known outside Turkey as the home of the important dried fruit industry, though as a matter of fact, besides sultanas and figs, the district produces valuable crops of cotton and tobacco. It is the most fertile region of Asia Minor, which readily responds to the attention of the cultivators. It has been said appositely of another neighbouring country that it is only necessary to tickle the ground with a hoe for it to laugh with a harvest, and this is true in almost equal measure of the Smyrna district. The changes and chances of Near Eastern politics have laid a heavy hand, however, on its productivity, and it is a tribute at once to the inhabitants and to the nature of the soil that, despite all that has happened since 1914, the region has largely been able to recover its peace-time activity.

Besides sultanas and figs a variety of other fruits are grown in the Smyrna district and its hinterland, notably, red and black raisins, almonds, walnuts, etc., and the export trade in fruit alone, through the port of Smyrna, amounts to between seventy and eighty thousand tons a year, with a value of over two and a half million pounds. Dried fruit is responsible for considerably more than half of the total exports.

Qualities of the Smyrna Sultana.

The Turkish sultana is the best known of all raisins, and enjoys the highest reputation on the world markets. It is the product of a small variety of the yellow grape which has been cultivated for many centuries exclusively in the Smyrna region. A seedless fruit, the Smyrna sultana is unsurpassed for its delicacy of flavour and sweetness. At the beginning of the last century the vine was cultivated mainly on the seaboard districts of Karaburun, Vurla, Chesmé, and Phoea. The vineyards were on sloping ground rising to a few hundred feet above the sea—ground which the fruit has shown to be particularly suitable for its cultivation, and it is of interest to point out that up to the present time the finest fruit has come from this area. In the course of time vineyards were planted in other parts of the province, notably in the Nymphaean Valley and the plains of Magnesia, regions also specially favourable for the vine. In other localities such as Menemen, Kassaba, Salihli, and Akhisar the cultivation of the vine was undertaken, but the fruit from these regions is, on the whole, below the standard.

Naturally, the vineyards demand ceaseless attention. The vines are pruned and trimmed in February and March, and subsequently the soil is ploughed and must be kept free from all growths. Sulphur is sprinkled on the vines as the leaves develop and the fruit appears, and the vines also have to be sprayed with a sulphate of copper solution, in the event of wet weather, to guard against blight and mildew. About the end of July the grapes are nearing their maturity, and the beautiful golden bunches when cut are dipped in a solution of boiling water, potash, and pure olive oil; and are then spread on sheets of cardboard in the drying sheds for five or six days to be thoroughly dried in the hot sun. The raisins are then collected into heaps, and when the stalks

have been removed the fruit is ready for the market. The drying period extends from the end of July to the middle of October, and for the success of the crop it is essential that the weather conditions during that period should be good. This year this has unfortunately not been the case, and, as recorded later on, the current crop of sultanas has been seriously affected.

SULTANA YIELDS, 1903—1928.

	Tons.		Tons.
1903 ...	65,000	1916 ...	33,000
1904 ...	34,000	1917 ...	27,000
1905 ...	54,000	1918 ...	25,000
1906 ...	27,000	1919 ...	29,000
1907 ...	42,000	1920 ...	16,000
1908 ...	55,000	1921 ...	31,500
1909 ...	52,000	1922 ...	38,000
1910 ...	42,000	1923 ...	34,000
1911 ...	22,000	1924 ...	45,000
1912 ...	53,000	1925 ...	29,500
1913 ...	59,000	1926 ...	33,000
1914 ...	37,000	1927 ...	49,000
1915 ...	44,000	1928 ...	52,000

It will be seen that in this period the yields have varied very greatly, ranging from the high level of 65,000 tons reached in 1903 to 16,000 tons in 1920. For the period 1903-1913 the annual average yield was about 46,000 tons, but, as was to be expected, the average for the period 1914-1924 shows a very considerable falling off, the figures being 37,700 tons. From 1925 onwards the output shows a steady improvement, but this season will mark a further time in all branches of agriculture, and in view of the setback, for, while the estimated yield was 65-70,000 tons, weather conditions during the drying period have been such as to reduce the production to about 50,000 tons, of which over one-third consists of rain-damaged fruit. The weather during the whole of September is said to

have been worse than any within memory. This is one of the dispensations which have to be faced from time to time. Efforts the farmers have been making in recent years, it may be taken for granted that, except in years of further disastrous experiences, increasing annual yields of sultanas may be anticipated.

Government Assistance to Industry.

The Turkish Government is unsparing in its efforts to help and educate the farmers and to encourage the planting of new vineyards; the agricultural banks are annually increasing their financial assistance, and small co-operative societies are being established in all districts to facilitate the cultivation, transport, and marketing of the produce. As regards the packing of sultanas and figs, in connection with which some criticisms were forthcoming a few years ago, which were speedily shown to be unfounded, the methods are improving year by year, and the Government, Municipal, and Health Authorities have introduced a series of regulations, and are exercising a severe control over all packing establishments. All labourers have to be medically examined and given a certificate before they can be employed in any establishment, while medical and sanitary inspectors are attached to every packing house throughout the season, and no effort is spared to make certain that the fruit will be manipulated under the most sanitary methods.

Smyrna Figs.

The figs of the Smyrna district are as famous as the sultanas, and the mention of the district instinctively brings both to mind. Like the sultana vine, the fig tree is indigenous to Asia Minor, and is found in all countries on the Mediterranean sea-board. It is in Anatolia, however, that the finest qualities are found, and whether it be the peculiarity of the soil or climate that gives Turkey her advantage in this respect, the fact remains that so far no other country has succeeded in producing figs of the quality of those grown in the Smyrna district. The fig-growing area is approximately the same as the vineyard area, the most famous region for figs being the Meander Valley. The fruit grown in this neighbourhood is thin-skinned, is very sweet and of an aromatic flavour. Other fruit regions are found along the banks of the Cayster River, and in the districts of Odemish and Ephesus, but the fruit of these orchards is not of the wonderful quality of those of the Meander Valley.

As in the case of the vineyards the fig trees are the object of the most careful attention. Early in the year

when the figs ripen, and the fruit is left in the sun to be thoroughly cured. It is then sorted into various grades, packed in sacks, and sent to Smyrna to the packing

THE PACKING OF FIGS IN BOXES.

houses. The yields of figs from 1908 to 1928 are as follows:—

	Tons.		Tons.
1908 ...	23,000	1918 ...	18,000
1909 ...	22,000	1919 ...	21,000
1910 ...	28,000	1920 ...	22,600
1911 ...	21,000	1921 ...	19,000
1912 ...	19,800	1922 ...	22,000
1913 ...	20,900	1923 ...	24,500
1914 ...	22,000	1924 ...	23,000
1915 ...	17,000	1925 ...	19,000
1916 ...	18,000	1926 ...	27,000
1917 ...	15,000	1927 ...	30,000
		1928 ...	32,000

As these figures indicate, the production of figs is now on the upgrade, but, as in the case of sultanas, this season's crop will show a marked falling off owing to the terrible weather conditions. It is estimated, indeed, that 50 per cent. of the fruit is so badly damaged that it is unfit for packing and export.

As pointed out above, the greatest care is taken in manipulating and packing the fruit, and the methods of packing are constantly being improved. Messrs. C. J. Giraud and Co., the well-known firm of fruit packers, imported two years ago a large and vacuuming plant capable of dealing with 120 tons of fruit daily, and report that they have found the vacuuming of figs an indispensable operation for maintaining the quality of the fruit.

SUDAN GUM.

The true Gum Arabic of European commerce comes from *Acacia Senegal*, Willd., a low tree with grey bark and flexuose branches. Two or three grades of this gum are recognised:—1. Gum Senegal, from the French African Colony; 2. Kordofan or Turkish Gum, with its various sub-divisions; and 3. Inferior qualities, known to the trade as Suakin Gum, Sennar, Blue Nile, Barbary or Morocco and Mogador Gum. These latter are derived mainly from *Acacia Arabica*.

Kordofan Gum, known in East Central Africa by the name of *hashab*, comes from the mountainous tracts of Kordofan, almost in the same latitude as Senegal. It

the land is furrowed, and trenches are dug round the trees. The young fruit is fertilised by the Capri or wild fig, strings of which are hung in the orchards in May, and on the success of this process the outcome of the harvest is very largely dependent. August is the month

occurs in round lumps, often as large as a walnut, or in irregular broken pieces, pure white, very much fissured, especially on the surface. It is this gum that is most frequently used for medicinal purposes. The Kordofan trade is centred on El Obeid, the gum being brought to the market there from varying distances, which may range up to eighty miles. The gathering of the gum crop usually begins about a month after the rains have ceased, that is, in September, but the "season" of major activity is from February to April, when there may be almost daily arrivals at El Obeid. The trade is supervised by the Sudan Government, only licensed brokers being allowed to buy gum in the open market, and no purchases may be made until the gum has been brought into the market. The average total Hashab crop during the years 1923 to 1928 was about 20,000 tons, the amount reported for the first nine months of the current year being 15,568 tons.

Bombay, it may be mentioned, was at one time the centre of distribution for gum arabic imported from the Sudan. The trade, however, now reaches Europe direct. The gum known in Indian commerce as *Tragacanth* comes from *Astragalus Heratensis*, Bunge, a Persian shrub, common in the stony soil of the Harirud Valley and Khorasan, at an altitude of 3,000 feet (Watts' "The Commercial Products of India"). It is used in India, Persia and Turkestan mainly in the stiffening, glazing and facing of local fabrics. Gum *Tragacanth* is also the chief species emanating from Asia Minor.

Gum arabic, if boiled with dilute sulphuric acid, is converted into sugar galactose, and in moderately strong nitric acid is changed into saccharic, tartaric and oxalic acids. The finer qualities serve as an emollient or demulcent in medicines, and are used in the manufacture of confectionery. Gum figures also in calico-printing and in all other industries where a mucilage is required. The inferior qualities are used for the purposes of an adhesive paste, and as an ingredient in whitewash and mortars and in paints used for wall distemping.

IRAQ DATES.

Iraq and Palestine are alike in their dependence on a fruit for the staple article of their export trades. Without the Jaffa orange the trade of Palestine would still be relatively insignificant, while the importance of the date to Iraq may be gauged from the fact that it represents on an average 30 per cent. of the value of the total exports. Naturally, dependence on one item has its limitations, for neither the orange nor the date can bring absolute prosperity to the respective countries, but in each case there are other products which promise ultimately to take the leading place in the export trade.

As happens with all similar crops, the value of the date harvest has varied considerably from year to year. For 1926-27 the value of the exports was Rs.16,845,000 out of a total export trade of Rs.46,089,000; for 1927-28, Rs.18,493,000 out of Rs.61,541,000; and for 1928-29 Rs.16,153,000 out of Rs.55,741,000. The date crop of 1927 was particularly good, but that of 1928 fell below the average owing to adverse weather conditions. The present year's crop, however, is reported to be up to the level of that of 1927. The chief markets for Iraq dates are provided by the United Kingdom, India, the United States, Arabia, and Persia.

Climatic conditions in Iraq are very favourable for the cultivation of the date palm, but the country cannot be said to have much advantage in this respect over the numerous other regions which grow date palms, and in at least one case the yield of dates is many times higher per date palm than it is in Iraq, while the quality is also considered to be superior. The remedy for this is in the

hands of the Iraqis, who need to adopt far more scientific methods to keep up with their competitors in the production of this fruit. Date palms can be grown anywhere in Iraq provided they can be watered and tended. Consequently every town in Iraq has its belt of date palms, but the most important date-growing region is along the Shatt-ul-Arab from the Persian Gulf to Qurna, and in this area the date groves in Iraq territory are estimated to extend over about 140,000 acres. Next to this prolific region comes Baghdad where there are some twenty miles of date gardens beside the Tigris. Altogether it is thought that there are about 30,000,000 date palms in the country.

Curiously enough, the very finest dates do not come from the Gulf region or from Baghdad, but from Mendali and Badra, some way to the east and north-east of Baghdad. Naturally, in view of the outstanding importance of the crop, the date gardens, as a whole, receive considerable care, but, as already indicated, it is evident from developments in other countries that much more might be done in this respect. It is usual in the Shatt-ul-Arab region to turn a quarter of the ground each year to a depth of four feet, while the remainder of the land is lightly gone over. The date palm regions require plenty of water, which explains the extent of the date gardens in that region where irrigation presents no difficulty. In other parts where the normal river flow is not available for cultivation, water has to be brought to the land either from the river or from wells.

The normal harvest time for dates is in September. There are four stages in the ripening process, known respectively as "chimri," "khalal," "ratab," and "tamar." Some dates are fit for consumption at the second stage, and these are much in favour with the Arabs, while all dates are edible at the third stage. The "tamar" stage marks the maturity of the crop, and it is these dates which are exported to Great Britain and other countries to serve as an addition to the Christmas delights of the table. As soon as the fruit has been removed from the trees these are severely pruned in preparation for the next season's crop.

There are more than 130 varieties of dates in Iraq, the principal of which are "Sayers," "Halawi," "Khahrawi," and "Zahidi." Of these four varieties it is curious to note that that which gives the biggest yield provides the poorest dates. The yield of this variety, the "Zahidi" is 126 lb. per date palm as against 44 lb. for "Halawi," 37 lb. for "Sayers," and 30 lb. for "Khadhrawi." Dates of the best varieties are picked singly, while the others are cut in bunches.

Supervision of the Trade.

Since the inauguration of the Iraq Health Service, much has been done to improve the conditions of the date-exporting industry, especially with reference to packing. Some sanitary supervision has been exercised ever since the British Occupation, but in 1927 a Date Inspection Department was instituted, to work under the Health Officer at Basrah. Date packing stations are registered and licensed, medical inspection of packers, their families and dwelling places is carried out, the storage of the fruit before and after packing is regulated, and the use of clean boxes, to be fastened down on the day of packing, is insisted on. As a certificate of freedom from infection is exacted by most of the countries to which dates are exported, the withholding of such a certificate is sufficient penalty for breach of the Department's rules.

The Egyptian Government having expressed some fears as to the possibility of cholera germs being exported with the dates in times of epidemic, a very interesting experiment was carried out in 1928 by the Iraq Health Service. A number of dates, ready packed for export, were inoculated with living cholera germs, and these were examined at Suez by the Egyptian Public Health Department. No living cholera germs were discovered. It is supposed that the large element of sugar in dates acts as a safeguard.

Palestine's Economic Position

This has been an unfortunate year for Palestine, particularly so when it is borne in mind that the country was beginning to recover from the economic depression, which had made its influence so strongly marked on the emigration statistics. Last year the harvest in Palestine was poor, as was the case in so many other parts of the Near East, with the consequence that the depression was intensified. The one thing needed to bring about an improvement in the position was a really good harvest this year, and, as it happened, the past harvest was plentiful, and so the outlook in August was for the development of a much more prosperous period. Then followed the unfortunate disturbances which again altered the situation for the worse. It would, however, be a great mistake to attribute too great importance to the interruption in trade and commerce which naturally ensued. The worst effect was the blow to confidence, but even that was not very lasting as can be illustrated from the progress of the building industry. There was a falling off in activity for about a month, but subsequently there was a resumption of building, and it is expected that the production of cement by the Portland Cement Co. (Nesher) Ltd. (most of which is utilised in the country) will amount to about 70,000 tons this year as against 60,000 tons last year. Outside Palestine this company finds its chief market in Syria, but the local demand is such that the need for finding extensive outlets abroad may be said not to have arisen yet. The company is making innovations and improvements with a view to a greatly increased production in 1930. The building activity which now appears to be in evidence suggests that confidence is rapidly being restored, and, if only the political situation remains tranquil, the conditions favour substantial economic progress. A year ago the country's great stand-by, the orange crop, fell considerably below expectations, and the smaller exports of oranges, as well as of other crops, made a marked impression on the export trade. The figures for the total exports of 1928 were £P1,864,800 as against £P2,280,810 for 1927, those for Palestine produce alone being £P1,487,207 as against £P1,899,259. Of this decrease oranges were responsible for £P189,126, the exports totalling 2,202,435 cases as against 2,658,249 cases. For the whole of the 1928-29 season the exports totalled 1,580,544 cases against 1,996,195 for 1927-28 and 2,024,730 cases for 1926-27. This year the orange crop is good, and it is expected that the exports will be in excess of two million cases. It is known that the United Kingdom will be importing about 300,000 more cases than last year, while the German market for oranges is developing in a remarkable manner, sales of 300,000 cases having already been made for that destination, as against a total of 190,857 cases for the previous season. This development of the European market for oranges will be good hearing for the Palestine growers, for the constant extension of the area under orange groves, which will soon be making its influence felt on the production figures in a marked extent, calls for a corresponding extension of outlets if the industry is to remain a remunerative one.

The Orange Industry.

The principal economic development since the War has been the expansion of the area under orange groves. The dangers involved in an undue dependence on one commodity are only too obvious, as the history of several countries shows, but Palestine had no other course to adopt than to concentrate on orange production pending the development of other sources of national wealth, and reliance on a commodity such as the Jaffa orange does

not carry with it quite the same degree of risk that some other products of the soil do. For one thing the crop may be affected as in the 1928-29 season by climatic conditions, but even so the yield is very good and a leading rôle is still played in the export trade. In the case of other commodities, such as maize, there may be an entire cessation of exports, a development unimaginable except in the case of some far-reaching calamity as regards the Jaffa orange. Then Palestine is happy in the comparative absence of competition. Cyprus is the only other region producing the Jaffa orange, and the expanding demand for the fruit on the world markets is such that neither Palestine nor Cyprus need have any immediate anxiety as to the prospects of disposing of the annual crop.

The present area under orange groves is estimated to be between 80,000 and 90,000 dunums. The rate of increase since 1922 has been very remarkable. At the close of that year the area was no more than 32,000 dunums, at the beginning of 1924 it was 34,000 dunums, while at the end of 1926 it amounted to 42,000 dunums, or approximately 10,000 acres. A further 18,000 dunums were added in 1927, while 1928 saw the area brought up

SAFED : A CENTRE OF JEWISH AGRICULTURAL COLONIES.

to 70,000 dunums, of which roughly 30,000 dunums represented Jewish plantations. In estimating the production of oranges in the next few years it has to be borne in mind that there has not been time for the large increase in the area to have a pronounced effect on the yield. From the season of 1930-31 onwards a large increase in the output is to be expected, and this will become more pronounced over a long period of years. For the new Jewish groves alone the increase in production from 1930 to 1940 is put at over 1,400,000 cases. Taking into account the expansion that may be looked for from non-Jewish groves it is obvious that the oranges available for export will soon be double the present total. The area available for orange cultivation is estimated at 280,000 dunums, so that between 190,000 and 200,000 dunums remain on which oranges can be grown. As has already been pointed out the market for Jaffa oranges is expanding, but while for the next few years there may be no difficulty in disposing of the crop it is obvious that an unlimited expansion of the industry will be fraught with very real dangers. There must come a time when the production of oranges reaches a limit beyond which it will not be safe to go. But that time is not in the near future, and when the orange groves of Palestine are yielding the maximum that can be safely obtained the country will probably be in the happy possession of other important industries which will have broadened the basis of her national economy.

the Fair!

**FEBRUARY
17TH-28TH
1930**

OLYMPIA, already the finest exhibition hall in the country, is being specially enlarged to house the vast array of British manufactures shown in the London Section of the Fair, and everything possible will be done for the comfort and convenience of the world's buyers who visit the Fair year by year in increasing numbers. The heating arrangements will enable an equable temperature to be maintained in the most inclement weather. Adequate restaurant accommodation will be provided, ranging from a de luxe service to simple cheap meals.

Extensions and improvements have also been made at **CASTLE BROMWICH** where, as

in previous years, the machinery and engineering exhibits and allied trades will be displayed.

Trade buyers should apply now for a free pass, which will entitle them to reduced fares on all railways in the United Kingdom.

Full particulars may be obtained from
The Nearest British Legation, Consulate
or Trade Commissioner

or from

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

A Products Supplement.

With this issue we publish an Illustrated Supplement dealing with some of the outstanding products of the Near and Middle East. The choice of subjects may be styled arbitrary, in so far as it does not claim to be exhaustive; but the products chosen have in each case an important bearing on the national economy of the country concerned, and the interest in them is more or less world-wide.

Turkish Exchange Weakness.

For some time considerable weakness has been shown by the Turkish exchange, and last week there was a further sharp depreciation, the rate at the time of writing being 1.065 as compared with 1.042½ a week ago. Taking into consideration the factors which are mainly responsible, it is evident that grounds exist for the view that the process may continue some way further, as it is difficult to see what the Turkish Government can do in the existing circumstances to give adequate support to the exchange. The principal cause of the exchange weakness has been the failure for two years in succession of the harvest, with a consequent falling off of exports and an increase in imports, as it was found necessary to supplement the home grain resources. The comparative failure of the sultana and fig crops this year owing to the unprecedented climatic conditions has been a particularly serious blow, for, as shown in an article in our Supplement this week, these commodities have become very important since the War. Another factor, transient in its effect, it is true, but all the same very important, has been the great increase in imports to avoid the operation of the new Customs Tariff. Lastly, we have Turkey's obligations under the Debt agreement which increase the demand for sterling, and as a result of these factors together, we have the present exchange weakness.

P. and O. Results.

In view of the difficult shipping conditions the satisfactory results again reported by the P. and O. Company pay a great tribute to the strength of this concern and show what may be expected when a real revival of trade takes place. Including the amount brought forward, the balance for the year ended September 30 last amounts to £943,967 as compared with £923,029 for the previous year and £918,001 for the year ended September 30, 1927. It is proposed to maintain the dividend at 12 per cent., tax free, the amount required for this being £551,102 as against £514,435 on the previous occasion. The report briefly reviews the company's operations, and it is stated that the freight and passenger earnings have shown an increase during the past year, while there has been a considerable reduction in expenditure.

Southern Punjab Railway.

The Southern Punjab Railway is being acquired as from the end of the present year by the Secretary of State for India, and last week the Board of Directors issued a statement regarding the purchase. Under the terms of the contracts the money is payable in sterling within four months from the date of the termination of the contracts, namely on or before April 30, 1930, together with interest at the rate of 3 per cent. per annum on amounts outstanding after December 31, 1929. The Secretary of State has now intimated that he will pay £1,000,000 on December 31, a further £2,300,000 on March 31, and the balance

on April 3. This will enable the Board to provide for the repayment of the whole of the Debenture capital amounting to £1,000,000 maturing on December 31, without having recourse to a temporary loan, and to make arrangements for the repayment of the £2,300,000 4 per cent. Preference stock at par on or about March 31, and for a first distribution in respect of the Ordinary stock on or about April 30. With regard to the Preference stock, the Board propose to pay a full six months' dividend for the period October 1 to March 31. With regard to the Ordinary stock it will not be possible to make a precise estimate of the amount of the capital assets that will be available for distribution until all outstanding assets have been realised and all necessary adjustments made. Assuming, however, that the full premium on the Sutlej Valley Railway is earned, as there is every reason to expect will be the case, the Board, however, hope that the amount available will be sufficient to allow of a total distribution of about £210 per cent., of which about £195 per cent. would be paid on or about April 30.

The Balkan Harvests.

More detailed figures are now available for this season's crops in the Balkan countries, and it is possible to gauge more accurately the difference that the larger crops are likely to make to economic conditions in that part of the Near East. Until a comparatively late period of the season there was reason to believe that bumper crops would prevail generally, but adverse weather conditions intervened and affected the crops to a considerable extent, but even so, most of the crops are better than those of the previous year, while the production of maize is far in advance of the 1928 figures. Yugoslavia's production (in thousands of bushels) is: for wheat, 96,949 as against 103,294; rye, 8,847 as against 7,527; and oats, 25,114 as against 25,236; while it is estimated that the yield of maize will be nearly up to the record of 148 million bushels obtained in 1924. The figures for Roumania are: for wheat, 92,113 as against 115,544; for rye, 13,067 as against 11,483; for barley, 117,170 as against 69,403; for oats, 92,483 as against 67,546; and for maize 251,330 as against 108,541. Bulgaria has not fared so well as Yugoslavia and Roumania, though in her case, too, maize shows a substantial increase. The figures are: for wheat, 37,432 as against 50,691; rye, 8,574 as against 9,220; barley, 9,296 as against 15,744; oats, 9,314 as

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

against 7,210; and maize, 29,881 as against 18,293. As I have already pointed out, the low prices ruling for cereals on the world's markets will not enable countries like Roumania and Yugoslavia to obtain all the benefit that they might reasonably expect to obtain from their crops this year, but it is certain that Roumania, in particular, will benefit appreciably from the harvest, and that the result will be a marked increase in the purchasing power of the peasant population.

COMMENTATOR.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended November 30:—

There is nothing very inspiring to report with regard to November trading, there having been less than usual of the activity generally associated with this pre-holiday period.

When, however, one contemplates the disastrous state of affairs prevailing in other markets there is no need to look on the black side of the position, but rather to be thankful that it has been no worse. The world has been passing through a season of financial strain, in which enormous losses have been suffered, and though there may not appear to be any direct connexion between Wall Street speculations and declines in security values, nevertheless it must be recognised that these upheavals do affect the values of all commodities, and we can congratulate ourselves that our own particular market has felt it to so slight an extent. The restraining influence has been very marked, buyers showing no inclination to anticipate their requirements, but the fact that they are carrying little or no stock makes the outlook more favourable, once the disturbing factors are out of the way.

Currants.

Greek.—The period since our last report has passed with no material change in values, and only a moderate amount of business, no weight of fruit changing hands. Some pressure to effect sales of the lower grades was manifest, due to soft condition through insufficient drying, but holders of good to fine descriptions are disposed to await the renewal of demand, and for these, prices remain unaltered. Sales comprised Pyrgos, 38s. to 38s. 6d.; Amalias, 39s. to 40s.; Patras, 42s. to 43s.; Choice, up to 46s.; Gulf ordinary, 46s. to 52s.; fine shade dried, up to 56s.; Zante, 42s. to 43s.; Vostizza, 53s. to 58s.; fine, 60s. to 65s.; Smalls, 54s. to 57s. S.s. Gerano, Bactria, and Kavak arrived with further supplies. The pleasing feature of later arrivals has been the attractive appearance of Gulf, both as regards quality and condition. Quotations:—Pyrgos, 38s. to 38s. 6d.; Amalias and Patras, 39s. to 45s.; Zante, 42s. to 43s.; Gulf, 44s. to 56s.; Vostizza, 53s. to 65s.

Sultanas.

Smyrna.—An extremely quiet tone pervaded the market during the month, buyers finding it quite impossible to make progress or induce the country to operate, and practically no headway has been made with the small stock in first hands. Rain-damaged has been freely offered on a c.i.f. basis at declining values, but the disappointing out-turn of the bulk of parcels purchased to arrive has discouraged further commitments. Sales were:—Fair qualities, 40s. to 42s.; Good, 50s. to 58s.

Cretans.—Finest grades, 70s. to 75s.; lower grades, slow at 52s.

Greek.—Further supplies are to hand and business was done at: Ordinary, 37s. to 38s.; Fine, 74s. to 75s.

Figs.

Further arrivals per s.s. Manchurian, Roumelian, and Kavak met a good reception for best parcels, but some lots showed a certain

amount of unsoundness and necessitated a quick sale at reduced rates, which accounts for the big range in prices. Sales were:—Large boxes, 58s. to 82s. 6d.; small boxes, 75s. to 90; Locoums, 115s. to 122s. 6d.; Genuines, 34s. to 40s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of 6,800 metric tons of asphalt for the Tanzim Department, Cairo. February 3. (D.O.T.)

Bedsteads.—The Department of Public Health, Cairo, invites tenders for the supply of iron bedsteads. December 28. (D.O.T.)

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Luxor. The principal materials required are 10,850 metres of steel tubes of various sizes from 80 m.m. to 300 m.m. internal diameter, together with specials, 58 sluice valves, 15 hydrants, 7 column hydrants, and 6 drinking fountains. January 7. (D.O.T.)

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping machinery. The contract involves centrifugal well pump and direct coupled electric motor, together with piping and accessories. February 1. (D.O.T.)

Transmission Lines.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of high tension 3-phase overhead transmission lines in Northern Delta, consisting of a main line of about 165 kms. and branch lines of about 150 kms., including all necessary materials for the lines and all accessories. February 27.

Diesel Engines.—The Ministry of Public Works, Mechanical and Electrical Department, invites tenders for the supply and erection of two Diesel engines and accessories. January 4. (D.O.T.)

Direction Indicators.—The British Commercial Secretary at Cairo (Mr. R. M. A. Turner, O.B.E.) has reported a possible opening for the sale of direction indicators for motor buses and taxicabs in Egypt. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Glasgow, December 17; Manchester, December 24; Birkenhead, December 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Markhor for Calcutta (Birkenhead, December 7); s.s. Mahout for Calcutta (Glasgow, December 5; Birkenhead, December 14).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 11).

British India Line.—S.s. Masula for Bombay (London, December 14); s.s. Margha for Colombo, Madras, and Calcutta (Middlesbrough, December 7; London, December 14).

Cunard Line.—S.s. Bothnia for Gibraltar, Malta, Corfu, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, December 13; Swansea, December 13; Liverpool, December 14); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 21).

P. and O. Line.—S.s. Burdwan for Calcutta (London, December 20); s.s. Ranchi for Bombay (London, December 20).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 10); s.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, December 14).

Ellerman and Papavanni Lines.—S.s. Lisbon for Gibraltar*, Algiers*, Oran*, Smyrna, and Constantinople (Liverpool, December 7); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 7; Swansea, December 12); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 12); s.s. Algerian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 28; Swansea*, December 28); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbarv) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*†CASTALIA ... Dec. 10	*†ELYSIA ... Feb. 4
‡BRITANNIA ... Jan. 10	‡TUSCANIA ... Feb. 11
‡ Leave Marseilles January 18 and February 17.	

*First class passengers only. †Special low fares. ‡Calls Port Sudan.
† First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL Feb. 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 3.

The Stock Exchange has passed a more quiet week, but the general tone has been disappointing. There was further liquidation in the more speculative markets, and although the volume of selling was much smaller than in recent weeks, there appeared to be less resisting power. Gilt-edged stocks were irregular at first, but were better towards the end of the week, on a slight improvement in the monetary situation and an addition to the Bank of England's stock of gold. A fairly good set of traffic returns failed to stimulate the Home railway market. In the industrial market the Horne group of companies was flat on the announcement of Mr. Horne's bankruptcy, while the international group, as already mentioned, suffered from liquidation. Oil shares reacted after last week's advance, and a cold reception was given to the proposed exchange of Anglo-American Oil for Standard Oil preferred stock.

The Horne Group.

The group of companies with which Mr. Henry S. Horne, who this week filed a petition in bankruptcy, was connected have for some time been under a cloud, and rumours of impending trouble had for several weeks been current in the City. The general investing public, too, watched with anxiety shares such as the Associated Anglo-Atlantic, quoted at 49s. 6d. earlier in the year, fall to 3s., and Carmelite Trust, which in six months fell from 22s. to 2s. 3d. The group consists of three sections: the Red Triangle cement and brick manufacturing companies, now amalgamated into the Allied Cement Company; the finance or trust companies, British Cement Products, Associated Anglo-Atlantic, and Carmelite Trust, and finally, the newspaper business of Anglo-Foreign Newspapers. The finance companies to a greater or lesser degree are concerned with newspapers, pulp, and cement. There is no doubt that very sound technical skill has been put into the trading and manufacturing side of the business, and it is chiefly the finance section that is in difficulty. Investors may take this as a helpful guide in assessing the prospects of the group.

Tin Restriction.

The task of bringing order and method into the world's tin production, which was started in earnest a few months

ago, when the Tin Producers' Association was formed, is being carried on with vigour. At a recent general meeting of this organisation, which numbers 160 companies among its members, certain resolutions in the direction of restriction were adopted. The key position in the industry is the smelters, and it is proposed that the output from the smelting works should be limited by agreement and below the present capacity. The producers contend that the system of competing companies is antiquated and that the producing groups should now act together. These are bold suggestions in a problem made difficult because of the various countries concerned. But at a time when plans for replacing competition by international agreement are making progress in more complicated industries, such as coal, iron, and steel, the task of the Tin Association, although difficult, should not be considered impossible. That restriction is desirable is admitted in many quarters. In the Federated Malay States, for example, new mining licences are not being issued; and consumers, too, view with approval any reasonable attempt to stabilise prices. Industrial rationalisation on this scale is accomplished neither quickly nor easily and cannot be successful, as the Rubber Restriction failure showed, unless it is complete. A recovery in the price of the mineral and the corresponding hardening of tin shares is, therefore, not to be expected in the immediate future, however successful the Tin Producers' schemes may ultimately be.

Satisfactory Industrial Reports.

Several well-established industrial firms have recently declared satisfactory dividends, showing, incidentally, how Stock Exchange share quotations can occasionally lose touch with values properly corresponding to earning capacity. Tate and Lyle, the sugar refiners, afford an example of this. The net profit just declared, for the year ended September 30, amounts to £586,582, as against £464,852 for the previous period. This was arrived at after providing £150,000 to general reserves, £50,000 to depreciation account, the same as last year, and £100,000 against £60,000 last year to investment reserve. The ordinary shares received an interim dividend of 4 per cent., which, with a final dividend of 11 per cent., makes 15 per cent. for the year, against 12 per cent. last year. In a different field of industry a satisfactory report has recently been issued by S. Smith and Sons, motor accessory manufacturers. Trading profits for the year ended August 3 at £164,793 are nearly £4,000 more than last year. The preferred ordinary shares are to receive a dividend of 17 per cent. and the deferred ordinary 37½ per cent., being the same as last year, but on an increased capital. While the progress over last year is perhaps not as great as might have been hoped, it is none the less indicative of a sound financial position, which is also borne out by the balance-sheet. The preferred ordinary shares of this company can be bought to yield about £9 per cent. The yield on Tate and Lyle ordinary is approximately £7 8s. per cent.

The Egyptian State Railways have given a contract for 15,000 tons flat-bottomed rails to David Colville and Sons, Glasgow.

The offices of the P. and O. Company's main and branch lines at present established at the Royal Albert Docks will be closed at the end of this year and new combined offices opened at the King George V. Dock, Sheds Nos. 2 and 4, on January 1 next. The general increase in size of the vessels of the P. and O. fleet since the War necessitates the more frequent use of King George V. Dock, which is capable of taking the largest liners using the port of London.

Ruston-Bucyrus has been registered as a private company, with a nominal capital of £800,000 in £1 shares (400,000 "B" ordinary and 400,000 "R" ordinary). The objects are to acquire (a) that part of the undertaking of Ruston and Hornsby devoted to the manufacture and sale of excavators, and (b) the business carried on by Bucyrus-Erie Company in certain parts of the world, and to manufacture and deal in machinery of all kinds. The first directors are: W. W. Coleman, Colonel P. D. Ionides, R. W. Newberry, and Sir Archibald J. C. Ross, K.B.E., deemed to have been appointed by the "B" ordinary shareholders, and Colonel J. S. Ruston, G. R. Sharples, J. H. W. Pawlyn, and V. W. Bone, deemed to have been appointed by the "R" ordinary shareholders. The chairman of the Board will be elected by the "B" directors.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Engineering Topics

(By Our Engineering Correspondent)

Steam Treatments.

The subject of high temperature work has come to the front lately, and in connexion with many industries the point is being raised as to whether it would be advantageous to raise either the temperature or pressures of certain steam treatments or to carry out certain operation at higher heats. Naturally the higher temperatures used in the treatments of metals are the results of careful research work and, incidentally, they require special apparatus for their measurement. One of the most interesting forms of this is based on the fact that when a junction of two dissimilar metals is heated and current of electricity is generated, the strength of it varies with the temperature, in direct ratio.

The earliest form of this metal thermometer was designed nearly a hundred years ago, the metals used being platinum and iridium. It was found at an early date that special electrical instruments should be used with such a couple in order that accurate results should be obtained. The first really satisfactory heat measuring device of the kind was composed of platinum and an alloy of platinum and iridium, but before long it was found that a more satisfactory alloy for the second metallic element was a mixture of platinum and rhodium. This was more stable and reliable at temperatures of above 1,000 degrees Cent. This alloy is still regarded by many engineers as being the best that can be used, although there are in use many thermo-couples composed of other metal alloys. The high cost of platinum and rhodium alloy has driven those who manufacture such instruments for commercial use to seek for cheaper metals or alloys which will give almost as good results in practice, and consequently a good deal of research work has been done in connexion with junctions of various grades of iron and nickel, nickel and copper, iron and constantan and copper and constantan; most, if not all of which cannot be used with certainty on temperatures of higher than 800 degrees Cent. Nickel and constantan also make a good element for comparatively low temperature use.

For furnace work it is necessary to protect these couples from the gases present in the furnace or flues, and so they are built into insulating sleeves, generally of porcelain, with an outer protective sleeve of steel. Steel sheaths cannot be used, however, for temperatures higher than 1,100 degrees Cent., and where these are likely to be met with, outer sheaths of fireclay are used.

Naturally, variations in the temperature of the cold junction of such a couple would effect the current obtained through the heating of the hot junction, and compensation for this has to be incorporated in the design of the instrument by which its temperature is kept constant. Where work of a high degree of accuracy is required, even such small variations of temperature as may take place near the registering instrument have to be taken into account.

Sewage Work.

Information is just to hand of a case—not in this country—where a piece of gross carelessness, coupled with ignorance on the part of the superintendent of a sewage disposal plant, endangered the lives of an entire community. At the place in question, the local water-works engineer was surprised to be rung up by a local analyst, who said that he had just been carrying out some work in which he had used some town water, and had found that it was badly contaminated with sewage! As the source of water supply was far removed from any sewage contamination, and there was no possibility of sewage getting into either the purification reservoirs or filters, the matter was gone into thoroughly and it was

found that the whole trouble was at the sewage works. There two powerful pumps were in use for lifting the sewage from the town sewerage system to the treatment plant some distance away, and, in order to ensure easy priming of these pumps, the local manager had taken two pipes from the town water supply into the pump lifts, with the result that as the pumps worked, so they drove, at each stroke, a small quantity of sewage into the town mains, against the local water pressure. Another instance of gross carelessness in connexion with water supply also came to light, by accident, in a town some thousands of miles away from here. A message was received at the water engineer's office from the leading restaurant in town to say that there must be something wrong with the water, as for some time past it had been turning the silver black. As the presence of sulphur, which would have that effect, was impossible, the presence of chlorine was suspected and analyses of the water showed that it contained appreciable traces of the gas. Whether something dawned on the engineer then, or whether it was simply a fluke, we cannot be sure, but he made a test of the water supply at a factory close to the restaurant and found it perfectly free from chlorine, which let the cat out of the bag! The town, being one of these 100 per cent. efficiency towns, where nothing was wasted, made a point of supplying low grade water for factory use. Someone, in connecting up the factory and the nearby restaurant to the mains had coupled up the factory to the pure water supply and was running the waste water from the public baths into the restaurant to be used for cooking and drinking purposes. It is pleasant to reflect that owing to our common sense errors of that kind could not possibly occur in this country.

Miscellaneous.

I was glad to note that Mr. H. L. Kenward, sales manager of the Dunlop Rubber Co., Ltd., has been elected president of the Institute of the Motor Trade for the current year. Sir Herbert Austin, Sir Edward Manville, Mr. F. S. Bennett, Earl Howe, Mr. Geo. Lucas and Sir George Beharrel have been elected vice-presidents.

Considerable criticism is being directed in many quarters against several of the automatic road signalling devices in use, the chief contention being that their use tends to accentuate rather than to reduce traffic congestion. Some of the more elaborate and higher-priced apparatus, however, seem to be free from all or many of the drawbacks that are being pointed out as existing in the cheaper types.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 27:—

Egyptian Futures.

Sakel Contract.—A series of quiet and somewhat featureless markets has occurred during the past week, and with both trade and speculative support being of a restricted character, values have developed a gradually declining tendency. A certain amount of resistance was experienced when Januarys approached the 14d. level, a few buying limits and trade fixing orders at this figure holding the market for a short period. The action of Alexandria has latterly, however, been far from reassuring, and with further poor reports from this source this morning, we have again dropped to fresh low levels for the season, to-night's close being 49 to 53 points lower for near and 65 to 41 points for distant positions on the week. It is unfortunate in a season when ample supplies of desirable Sakel cotton have been produced, and with prices standing at what can be termed a reasonable level, that outside influences bar the trade from obtaining full benefit from the situation. Financial conditions in countries which, in the ordinary course of events, provide a satisfactory outlet for fine yarns, have recently caused a good deal of apprehension, resulting in a partial closing down of business, for the time being at any rate, with these customers. The effect of this has been witnessed in the poorer tone in evidence in Manchester during the past week, and a corresponding falling off in the demand for fine cottons has been experienced. Exports from Alexandria compare very unfavourably with those for the same period last year, and with unsold stocks accumulating rapidly, prices are being gradually forced down to the Government's buying basis. Local straddle differences with Alexandria have a tendency to widen, but, on the other hand, our premium over the American contract has narrowed nearly to the extent of a farthing per lb. on the week.

Upper Contract.—Trading in this contract during the past week has been on very quiet lines, only moderate changes have been recorded, and price movements have been fairly closely allied to the fluctuations witnessed in the American departments. One satisfactory feature has been a revival of interest on the part of spinners; a healthier inquiry for actual has been in evidence, and if the resultant business has not been large, it certainly points to an improvement when general conditions become more settled. Values in Alexandria have now declined to within a few points of the Government's limit, and on this account only restricted fluctuations are probable for the immediate future.

Egyptian Spot.

Business has been disappointing during the past week. The harder tone, which was in evidence when we last wrote, has not been maintained. Apathy has been the prevailing note and lack of confidence amongst spinners has been most marked. In Uppers and Pillion, declines have been only moderate, but Sakels have been a weak spot. To-day, for the first time, when the futures board recorded Sakel at under 14d., a certain revival of interest occurred, not so much in Sakel (as might have been expected) but in Uppers. Although both Sakel and Uppers look reasonable enough at these levels, it is difficult to see from what quarter the much-needed support is to come. At the moment, the supply is greater than the demand, and it remains for the individual to decide to what extent this state of affairs has already been discounted, if at all.

Sakels.—Only a moderate business has passed in this growth, and the inquiry has been concerned chiefly with the low cotton at from 12½d. to 13d., or the Good to Fine qualities at from 200 to 250 on.

Uppers.—Less interest has been shown of late in Uppers within the "10 off to 20 on" range, but more attention has been paid to the better grades at from 75 to 100 on. This latter market is slightly irregular, and some shippers report a difficulty in obtaining the desired quality.

Pillion has been in fair request, but results have been rather disappointing.

Nahda, Maarad, White, and Fuadi.—These have all figured in the inquiry from time to time, but only to a very limited extent.

Tokar Sakel has again suffered from neglect.

Sudan Sakel has been in moderate request only.

C.i.f. business has been quieter, but there is no doubt that there is business to be had—at a price. Forwardings last week were returned at 5,926 bales Egyptian and 1,997 bales Sudan.

Spot Sales.—These have been estimated at 1,200 bales Egyptian and 350 bales Sudan Sakel. Quotations of Sakel show a decline on the week of 45 points (Ex. Fine exceptionally 70 points). Uppers are 7 to 12 points lower, and Pillion 10 points lower. F.G.F. Sakel to-day, 14.65d. F.G.F. Upper to-day, 10.58d. F.G.F. Pillion to-day, 11.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report for the week ended November 21:—Since our last report the futures market has again been quiet, with no decided tendency. The week's summary of price movements is as follows:—Sakellaridis: November 27.22 dollars, 0.23 dollars down; January, 28.15 dollars, 0.09 dollars up; March, 28.82 dollars, 0.31 dollars up; May, 29.33 dollars, 0.43 dollars up; July, 29.83 dollars, 0.71 dollars up; November N.C., 30.41 dollars; 0.82 dollars up. Ashmouni: December, 19.38 dollars, 0.09 dollars up; February, 19.87 dollars, 0.22 dollars up; April, 20.30 dollars, 0.42 dollars up; June, 20.64 dollars, 0.47 dollars up; August, 21.04 dollars; October N.C., 21.22 dollars, 0.69 dollars up.

WIRELESS FROM THE SUDAN.

Short-wave wireless messages transmitted by Mr. Hinds for Major C. Court-Treant, the British Explorer, from a portable Marconi equipment in the wilds of the Sudan, have been received as far afield as the United States of America. Pitching their camps in the least known parts of the Western Sudan, Major and Mrs. Court-Treant and Mr. Hinds were able to maintain communication with Sudan Government wireless stations throughout their twelve months' travels in the jungle, where they were making the British International Film, "Stampede." Thus they were in regular touch with London through the Government stations, and on a number of occasions their transmissions, on a wave-length of approximately 30 metres, were heard at a distance of more than 5,000 miles in Detroit, Michigan, and Boston, Massachusetts. The wireless transmitter used was a specially designed Marconi set of extremely small power and weight, the power being supplied by turning the handle of a small electrical generator.

Turkey and Russia have reached an agreement on trading relations for six months.

This year's potato crop in Roumania amounted to 2,269,200 tons, an increase of 349,500 tons on last year's figures.

Mr. Edmund Godward, manager of the Bank of Australasia in London, has been elected chairman of the committee of the British Overseas Banks' Association for the ensuing year.

Major Frank Brian Frederic Bibby, of Sansaw, Shrewsbury, chairman of the Bibby Steamship Line, a director of the Great Western Railway Company and of the Marine and General Mutual Life Assurance Society, left £900,073 (net £861,817).

The Directors of the Anglo-Persian Oil Company have declared an interim dividend of 5 per cent., less tax, on the ordinary shares, payable December 21.

The Directors of the British Burmah Petroleum Company propose a final distribution of 5d. per 8s. share, making 7½d., tax free, for the year, compared with 4½d. last year.

Notes of the Week.

Turkey's Financial Problem.

The financial difficulties from which Turkey is suffering have long been foreseen abroad, and the main cause for wonder is that she has been able to stave them off until now. It is unfortunate that the problem should be essentially an international one and its solution possible only by means of foreign help, for neither unofficial nor official opinion in the country has any profound knowledge of finance, and the most disinterested outside advice, backed by genuine sympathy for the Turks, is apt to be looked upon askance as being prompted by sinister motives. Yet the fears that have obsessed the Turks on the subject of foreign finance have been almost entirely baseless, for the reason that a recurrence of the dreaded state of affairs which prevailed in Abdul Hamid's time would be possible only with a revival of the same type of régime. If the Ankara Government had been able to command adequate expert financial knowledge, it is difficult to believe that it would have felt obliged to keep all foreign capital at arm's length as the only means of avoiding victimisation. Economic reconstruction has proved a formidable task for most countries; in Turkey's case it has been complicated by a variety of special circumstances. In the first place Turkey occupies a wide area with a scanty population; sixty-five per cent. of her people depend for their livelihood on the land, yet the cultivated portion represents barely five per cent. of the total area of the country, and the normal practice of the peasant is to cultivate in any one year only a third of the land that he owns. This state of affairs argues a serious lack of labour, but it did not prevent an official attempt to bolster up large-scale industry, which presupposes abundance of labour, before any systematic effort was made to assist agriculture. It was hoped that the industrial products would supply domestic needs and restrict the purchase of foreign goods; but Turkey's first need was to produce what she could sell abroad, and consequently her main attention should have been devoted to the furthering of agriculture and to the marketing of her agricultural products. Another handicap from which the country suffered was that it had considered itself obliged to expel the people that represented the brains of its business world. The course adopted may have been sound policy and necessary; it was in any case her own affair, but when carrying it into effect, Turkey ought to have foreseen

the consequences and made provision to mitigate for the nation the financial and economic stagnation that had to follow.

The Plight of the Turkish Pound.

Gradually it is being realized in Turkey that the rapid depreciation of the Turkish pound is susceptible of an easy explanation, and that it is unnecessary to look for the cause in foreign intrigue or any widespread conspiracy against Turkey. A new tariff has been introduced based for the most part on a desire—by no means unnatural—to help Turkish industries. It is obvious that the industries that it is desired to help are quite unable to meet the country's actual needs, and merchants inevitably took steps to import under the old tariff as much as they could of the goods that were to be subjected to a greatly enhanced duty. At the same time, the Government, in carrying out its scheme for building railways out of Turkish capital and in defraying other public needs, has been obliged to spend large sums on foreign goods; it has also to meet its indebtedness by regular payments abroad, and as a result of an indifferent season there has been a setback in the export trade. Out of the country's exiguous income it also finds it necessary to devote more than a third to military purposes and public safety. The depreciation of the Turkish pound was bound to follow. Certain remedial measures may have the effect of arresting temporarily the fall, but offer no permanent solution of the problem. More radical and more comprehensive remedies, it is to be feared, are required, and in the interests of Turkey it is to be hoped that the opportunity will be taken to call in the best foreign advice, in order that the whole economic situation of the country may be comprehensively reviewed. Turkey has considerable natural resources; she enjoys a unique geographical position, and the present régime has established peace, security, discipline and self-respect in the country. Many of the measures adopted in recent years may have been in themselves sound and practical; but the impression conveyed abroad is that they have not been correlated nor made to fit in to any far-sighted policy resting on a sound economic basis. It is not enough to found a State Bank; adequate provision will have to be made for its functioning. The production of the country must be increased, but it will avail the Turks little, unless there is some

organizing of exports. With the best of intentions every foreign firm has been made to employ Turks; after the experience of many purely Turkish undertakings, especially industrial enterprises, an even stronger case might be made out for compelling every Turkish company to employ one or more foreigners in its management. Compulsion, however, in such matters, in whatsoever direction is a mistake. A sound lead by the Government, as was shown in the case of Japan sixty or more years ago, will be followed quickly by the nation as a whole. If the Government is unwilling to learn, the people will persist with equal obstinacy in the old groove, for all the edicts and regulations that may emanate from Ankara. Turkey under her present rulers has shown that she is worth more in the world scheme of things than to be merely a happy hunting-ground for concessionaires; under expert financial guidance she can become an important link in the economic reconstruction of the Near and Middle East.

Indiscipline in Greece.

Greece would seem to be suffering from an epidemic of indiscipline similar to that which prevailed in Italy before the introduction of Fascism. In addition to a series of strikes in various trades, University students in Athens and Salonika have also "downed tools." The events leading up to the student trouble appear to have originated with a praiseworthy desire on the part of the Government to raise the standard of University scholarship. The proposed steps were resented by the students, who proceeded to "demonstrate" against them, and, when they came into collision with the police, demanded to be received by M. Venizelos, in order that they might explain how their *amour-propre* had been wounded and lay their other grievances before him. The Prime Minister, who only a few weeks previously had had to meet a charge of having become haughty and exclusive, by publishing a statement in the Press to the effect that he was a busy man and really could not be at the beck-and-call of everyone who conceived a desire to see him, did not happen to be "at home," and the students again came into collision with the police. A fatherly letter ("I have a piece of fatherly advice to give you," he wrote.) of one-and-a-half newspaper columns was thereupon addressed to the students by M. Venizelos, counselling them to behave themselves, and pointing out that the Government was not disposed to ask for the modification of the law, "in order to open the flood-gates to ignorance and the lack of knowledge among that portion of Greek society which will form the directing class to-morrow." A few days later the Prime Minister had to address to the workers on strike another letter, equally fatherly and uncompromising in its tenour. So long as M. Venizelos remains in power his personal prestige will probably prove sufficient to keep in check any growing tendency to disorder; but the experience of the last few years does suggest that Greece has not yet accustomed herself to the genuine republican spirit which can dispense with the one strong man whose word counts, if not for law, at least for some show of order in the country. Greece must be one of few countries, if not the only one, to possess a publication called *Discipline*; it is to be hoped that the magazine will not indefinitely remain an anachronism.

Anglo-Yamani Circumambulations.

The tale of Anglo-Yamani relations is, indeed, an extraordinary one. We seem to advance certain stages, but no goal is ever reached, with the result that impatient or cynical observers are wont to wonder whether, in fact, a definite goal is in view, or whether circumambulation, undertaken for the mutual health of the parties concerned, is not all that is indulged in. From time to time questions are asked in Parliament on the progress of negotiations with the Imam Yahya of the Yaman, but little satisfaction is obtained: the Colonial Office, it seems, "still, still on hope relies." At such fitful intervals, Lord Lamington takes upon himself the self-imposed, honourable, but in-

creasingly melancholy duty of attempting to elicit some definite information upon the possibilities of an Anglo-Yamani Treaty, but after a certain amount of discussion, which follows well-known lines, his motion for papers is always withdrawn. So it happened in the House of Lords on December 3. Lord Lamington, with apparent support from Lord Lovat and Lord Stanhope, urged the Government to invite the Imam to send an emissary with full powers, not to Aden, but to London or to Cairo. Since we ourselves suggested this course many months ago, we are not disposed to query its wisdom. The position is, however, that the urgency of a settlement seems to be realised more fully by the Imam than by the British. According to Lord Passfield, practically all the territory of the Protectorate which Yamani troops had occupied has been evacuated, and the Imam now holds no hostages. The next move, therefore, in the official argument, lies with the Imam. Aden waits on Sanaa for the dispatch of a duly accredited official. Whether his dispatch has been interrupted by domestic trouble in the Yaman we do not know.

Hopes of a Settlement.

The Secretary of State for Dominion Affairs and the Colonies did, however, state that the Government, which had not had a reply to its communication, made about last July, to the Imam, expressing willingness to enter into negotiations, would not let the matter rest but would follow it up in one form or another. It is sincerely to be hoped that the Labour Administration will be as good as its word. Even if conditions in the Aden Protectorate are now, from the administrative point of view, satisfactory enough, even if they could not be notably improved by an Anglo-Yamani Treaty, surely such a Treaty is desirable in the interests of British prestige in south-western Arabia and in the whole of the surrounding territories? To the distant observer, it sometimes appears that this matter has been occasionally looked at from too narrow a standpoint, as if the integrity of the Protectorate were all that concerned the British Empire in that part of the world. If the trade which might result from an Anglo-Yamani Treaty were negligible, if the alleged resources of the Yaman were found to be practically non-existent, we should still urge the desirability of closer relations with one who should be our natural ally, but whose friendship has been forestalled, though by no means monopolised, by other nations. As far as can now be judged, essential British interests are safeguarded, and it is merely a question of etiquette (the "You must first come to me" attitude) which inhibits the establishment of closer relations. We may be wrong, but if our surmise is correct, surely there are diplomatic means other than prostration before the Imam of seeking and signing a Treaty?

The Condition of Palestine.

It is difficult to resist the conclusion that the tension in Palestine is still very acute. That the spirit of lawlessness is yet abroad is clear from the attacks on such men as Dr. Ticho, Mr. Bentwich, and Dr. Berkovitz. And even if it be admitted that such crimes represent only individual folly and madness, signs of a real easing of the situation are lamentably few. There appears to be little disposition at the moment either on the Arab or on the Jewish side to adopt a conciliatory attitude—the one definite proposal, made by Dr. Magnes, Chancellor of the Hebrew University, having met with opposition from or neglect by the vast majority of Zionists—and nothing, it seems, will be done in the way of a *rapprochement* until the Commission of Inquiry has reported. It is more than ever to be hoped, in these circumstances, that the Commission's Report will be unanimous, and, therefore, be published soon after the arrival home of its members at Christmas. As soon as that Report is published, the Government will, presumably, issue a firmly worded declaration of its intentions, and impose, willy-nilly, a *modus operandi* on the peoples of Palestine. The nettle must be boldly grasped, and the hand that does it will surely reap its reward. The old policy of groping for a policy must be abandoned, and

the British Government must formally do so. To lay on the local Administration the onus of discovering a workable solution is unfair, and, as has been seen, may be disastrous. If there be any prevarication or temporisation, who shall say when the troubles in the Holy Land may find their end?

King Ibn Saoud's Rebels.

It is an ironical fact that the very men who were the spearhead of the movement in Najd against the so-called "forts" on Iraq territory—Faisal al Duwish and his freebooters—the people who were held up in certain quarters as the holy justification of an inviolable principle, namely, the freedom of desert wells, should now have become the bane of the great King who himself protested so strongly against these same "forts." We will not weary our readers by recounting the dances which Faisal al Duwish has led his overlord since the attack on Busaiya fort in the autumn of 1927: suffice it to say that, from being the pattern of Wahhabi manhood and the symbol of the justice of Wahhabi claims, Faisal has degenerated into a mere outlaw, an irreconcilable malcontent. At the battle of Sibilla, early this year, Faisal was wounded and captured by his King's troops, but so sincere appeared to be the repentance of the old warrior, that King Ibn Saoud forgave him. With his mighty King away in the Hijaz, however, Faisal's rebellious spirit once more got the better of him. He broke his word, and roamed about the eastern deserts of Najd stirring up revolt against the absent King. For a time operations were conducted against him by loyal troops under the Amir Saoud, the eldest son of the King, but recently, either for military or political reasons, or, perhaps, for both, the King himself has taken over charge of the anti-Faisal drive. All these events would be a matter merely of domestic Wahhabi interest, but for the fact that, as is recorded in our letter this week from the Hijaz, the independence of Kuwait may be involved. It is being claimed, we notice, on behalf of the loyal Wahhabis (who appear, by the way, to be in the main those most recently converted, as opposed to some, among the rebels, who were the first to adopt the Puritan creed) that Great Britain, as Mandatory Power in Iraq, and as being in Treaty relations with various coastal chiefs, should forgo its moral duty of defending Kuwait against attack, in the higher interest of helping King Ibn Saoud defeat his enemies. Whether, from a closer point of view than it is possible to obtain in the Hijaz, such considerations of expediency are to be allowed to prevail over Treaty obligations, remains to be seen. One thing is clear, at any rate, that Great Britain cannot allow Kuwait to be made the base of any hostile operations against King Ibn Saoud. The situation is certainly an interesting one, which must be closely watched in view of the considerable possibilities which may shortly be presented.

INDIAN NOTES.

Muslim Education in India.

It is interesting to note the approval with which the report of the Hartog Committee has been received by the Muhammadans in India. This is, doubtless, due to that Committee's having recognised that the Muslim community has fundamental needs which have become grievances. This is particularly the case in Sind. In spite of the preponderance of Muhammadans in Sind, less than half the teachers belong to that religion. While the Sind Local Boards were the first to impose an educational cess, the grants they obtained from Government for primary education were tiny in comparison with those received by the predominating Hindu District Boards of the Presidency. Although the population of Sind is one-sixth of the whole Bombay Presidency, its share of the Provincial expenditure in education is only one fourteenth. These facts point to inequitable treatment not merely of the Muhammadans, but of Sind in general,

which must supply fresh material for those who ask for the separation of the Province from Bombay.

Where India Leads.

The completion of the electrification of the two railways leading from Bombay over the Ghats marks an important stage in the progress of communications in India. There must be many men yet living who did the weary journey up the Bhor Ghât by road, since the railway connexion was only completed in 1863. To many others the delay caused by the necessity for a reversing station is a recent memory. The section on the north-east line between Kalyan and Igatpuri is not quite ready, but by March next year the Great Indian Peninsula Railway will have the greatest length of electrified main line in the British Empire. The gain in comfort to the inhabitants of Bombay, who recuperate from their labours at the ocean's edge by week-end visits to Poona and Nasik will be great; but even more important will be the economic advantages to the trade of Bombay and the facilities of the Port. It has been claimed by some in Bombay that the electrification will make Poona a suburb of the Presidency Town. It is perhaps equally likely that it will give an additional argument to those who desire that Poona, already the capital of Maharashtra, should also be the capital of the whole Province. Such a transference of the seat of power would undoubtedly be acceptable to many of the Legislative Councillors, who prefer the climatic and residential circumstances of the upland town to the heat and turmoil of the great city.

A PAMPHLET ON PALESTINE.

The Jewish Agency for Palestine is publishing a series of "Palestine Papers." The first one to reach us is called "Palestine and the British Tax-Payer" (77, Great Russell Street, W.C.1. Price 2d.), and is designed to counter the statement that has been widely made in the popular Press of Great Britain to the effect that the Mandate for Palestine is a tax on the British people. The story begins with the Balfour Declaration of 1917 and with the conferring of the Palestine Mandate on Great Britain in 1920 and its confirmation by the Council of the League two years later. A paragraph is then devoted to what the Jews have already accomplished in Palestine; and then the question is directly asked: Who pays for the Jewish National Home? It is pointed out that the civil administration of Palestine is supported entirely by means of its own internal revenue, and that at the end of 1928 there was actually a surplus balance of over half a million pounds. It is further pointed out that from 1921 to 1929 the cost of military and air forces in Palestine and Trans-Jordan has been steadily reduced from £3,339,000 to £100,000. And the pamphlet ends with the unchallengeable statement that "It is untrue to say that the holding of the Mandate for Palestine by Great Britain, with the obligation to facilitate the establishment of the National Home for the Jewish people, entails the payment of even a single farthing a year on the part of the British tax-payer."

THURSDAY, DECEMBER 12, 1929.

THE OUTLOOK IN "GREATER INDIA."

It has now become possible to estimate with some hope of accuracy the effect produced in India by Lord Irwin's much-discussed declaration. In general it may be said that something has been accomplished towards the relief of the political tension which has been so marked a feature of the Indian situation during the last twelve months. So far as the Indian Liberal Party is concerned, the effect of the Viceroy's pronouncement has been to provide them with a bridge across which they have retreated from a position long recognised as untenable. The leaders of this party are by temperament as well as by outlook unfavourably disposed towards the policy of non-co-operation and passive resistance; and had it not been for the unfortunate circumstances which overshadowed the early days of the Statutory Commission, the Moderates would never have joined the Swarajists in the campaign of boycott. They have now redressed this error, and their influence is once more thrown into the scale of sanity. In considering the attitude of the Swaraj Party at the present time, it is important not to forget that within the last twelve months there has developed a Left Wing group with views more extreme than those countenanced by the acknowledged leaders. The Independence movement, which is strong in Bengal and Madras, has already alarmed the older Congress veterans; but by its association with the Youth Movement led by the younger Nehru, has secured a considerable hold upon the rising generation of politicians. Hence it is that the famous names of the Congress Party were with comparatively little difficulty added to the statement in which the Viceroy's gesture of friendliness was welcomed; although conditions were added which were regarded rather as "face saving" than as practical reservations. The real fact is that both the Liberals and the Swarajists are at the present moment genuinely afraid of being stampeded by the enthusiasm and inexperience of the younger men; and have welcomed the opportunity afforded to them of getting back upon what they regard as safer ground. This it is which has prevented the debates in both Houses of Parliament from exercising any considerable effect in offsetting Lord Irwin's pronouncement. As might have been anticipated by those closely in touch with Indian affairs, it is the announcement of the Round Table Conference rather than the declaration about Dominion Status which has excited the greatest share of attention in India. It would not be too much to say that it is the Conference and not the declaration which is regarded as the real test of Great Britain's attitude towards India. All political parties are now engaged in girding up their loins in preparation for this event; and this alone is likely to be the most powerful single factor in moderating the tone and temper of the proceedings of the approaching Indian National Congress at Lahore. Indian political opinion is now actively centred round the future Conference; and speculations as to its membership, its procedure, and its precise function, present the most immediate topics of discussion in almost all shades of the Indian Press.

The interest which has been aroused by the interchange of correspondence between the Prime Minister and Sir

John Simon is by no means confined to British India. At the time when the precise effect of Lord Irwin's pronouncement was a matter of considerable anxiety in this country, the Princes, who can generally be relied upon to do the right thing in emergency, declared emphatically in favour both of the Conference, and of the Viceroy's pronouncement. In rapid succession the Maharajas of Kashmir, Bikaner, Alwar, and Nawanagar, made plain their hearty approval; and in so doing not only confirmed the reputation of the Princes for practical statesmanship, but also reassured many shades of opinion in England which were inclined to regard the declaration as very dangerous. It is, of course, well known that the Chamber of Princes has for long been pressing for a recognition of the right of the Indian States, which comprise more than one-third of India, to be represented in any conference which will be responsible for suggesting to His Majesty's Government the outlines of a settlement. In taking up this position, the Indian Princes have had to incur a considerable amount of criticism from advanced sections of Nationalist opinion in British India, which, in the hope of offsetting the influence of the Chamber of Princes and the traditional attachment of the Indian Rulers to the British connexion, has done its best to encourage the activities of a self-appointed body styling itself the Indian States Subjects' Conference. Into the credentials of this body it would be interesting, if somewhat unprofitable, to inquire; but it may be recalled that Sir Harcourt Butler and his colleagues on the Indian States Committee refused to recognise its representative character and declined to afford a hearing to its delegates. On the announcement of the Round Table Conference, this body, which includes a small number of individuals with grievances against particular State Governments, approached Lord Irwin with a view to obtaining representation upon the Round Table Conference. Needless to say, this claim was emphatically rejected. It was pointed out that the Conference will be concerned with broad questions of constitutional policy, in regard to which the acknowledged rulers of the Indian States are the only persons who can speak with authority.

The associations claiming to represent the Indian States' subjects were also told that questions of the internal government of the States were within the purview of the Rulers concerned; and while the Paramount Power naturally exercised the responsibility of protecting the people against gross mal-administration, interference of the kind contemplated was precluded. The fact is, of course, broadly speaking, that, as Sir Harcourt Butler and his colleagues plainly said, a new spirit is abroad among the States' Governments; conditions have very largely changed in the last twenty years; and efforts to improve State administrations have already in many cases been attended with conspicuous success. While the outstanding achievement of Lord Irwin's action is the way in which it has rallied the Centre or Liberal Party and enabled those whose co-operation is essential to the effective working of the revised constitution to retrace their steps, scarcely less important is the fact that the Indian States and their Rulers, owing to the recognition somewhat belatedly accorded them by the Statutory Commission, now find themselves in a position to exercise a considerable influence in the adjustment of relations between the two countries. The Princes, since their relations with Britain began, have invariably displayed a firm and consistent attachment to the British Crown and to the British connexion. Those persons and parties who do not share their views will assuredly leave no stone unturned to offset, as far as may be, an influence which will always be exerted along sane and loyal lines. Fortunately, our own experience of the value attaching to irresponsible criticism of our own administration, is unlikely to incline us to view these attempts seriously. Through the difficult times ahead, we can rely upon the Indian Princes to stand by us firmly in our endeavour to arrive at a just and equitable settlement.

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, November 30.

The Court.

The King and Queen returned to Cairo this week from Montazah, and the official and social centre of affairs may now be considered to have been transferred back to the capital for the winter. King Fuad was welcomed at the station by the Princes, the Ministers, the High Commissioner, the Diplomatic Corps and the European and Egyptian notables, and there was a considerable crowd along the route to Abdin. In the afternoon he attended a great reception organised in the grounds of the Old Turkish Commissariat by an Egyptian Committee, at which speeches of welcome were made, and in the evening the city was most beautifully illuminated and a banquet of some hundred and eighty covers was given at Shepheard's Hotel by the Governor of Cairo, at which the Ministers and the Diplomatic Corps were the principal guests.

Demonstrations Again?

The King's reception, like the inauguration of the Stadium in Alexandria the previous Sunday, was made the occasion for a demonstration in favour of Nahas Pasha, which ended in a collision between the mob and the police. On both occasions the police had to intervene in order to ensure the circulation of the traffic, which the mobbing of the Wafdist leader's car held up, and on both occasions they were received with stones and other missiles by the demonstrators. These incidents are referred to only because they indicate that no sooner is there a prospect of a return of the Wafd to power than trouble ensues with the crowd and the students again become restive and active. There is not a shadow of doubt that these two pro-Nahas demonstrations were specially organised and the students encouraged to forsake their schools and indulge in this manifestation by the members of the Wafd, who have always been in favour of, and identified with, such tactics.

The Coming Season.

The season may now be regarded as opened. Already the social programme has started—there have been several "At Homes," including the first at the Residency since the arrival of the new High Commissioner—and an even more intensive season than last year is promised. The hotels and shipping companies all express satisfaction with the advanced bookings, and do not seem to be exercised by the financial and economic situation outside. The Semiramis has completed its new wing, which makes of it a most imposing edifice—the inauguration will take place very shortly; the Metropolitan, which is being run at moderate prices to cater for those who cannot pay the

higher tariff of the other hotels, is proving a great success, and will help to relieve the congestion; while a new hotel has been opened in the Fayum with a kiosk on Lake Karun for shooting parties. Cavaliere Dalbagni, who obtained such a success last year at the Royal Opera House, has again secured the concession. Last year he incurred a considerable loss, and the Government, convinced at length that the subsidy was insufficient to secure a proper programme, has increased it by a third, and taken over the charge of the permanent personnel. The programme that has been arranged for the coming season opens next week with French Comedy by the official Comedie Française troupe, and will be followed by French Operette and Italian and French Opera, for which some of the leading singers from Milan and Paris have been engaged. Finally, the racing season, which has already opened with successful meetings at Gezira and Heliopolis, promises to receive an added interest by the presence among the owners of the new High Commissioner, Sir Percy Loraine, who is an assiduous habitué of the Turf, and is bringing over his stable from Athens.

Lord Lloyd's Speech.

The sensation of the week has been the cable in *Al Mokattam* giving a résumé of a speech which the correspondent alleged had been delivered by Lord Lloyd at Oxford. Those who know the late High Commissioner's character could not conceive for one moment that he could have made in a public speech the statements attributed to him, but the Egyptian Press, with the exception of *Al Mokattam* and *Al Siassa*, at once rushed into print with bitter attacks on Lord Lloyd, while the Egyptian Magistracy, through the mouth of the President of the Native Court of Appeal, Abdel Aziz Pasha Fahmy, and the Egyptian Engineers of the Irrigation Service presented protests to their respective Ministers refuting the allegations which the first telegram of *Al Mokattam* said Lord Lloyd had made with regard to dispensation of justice and the distribution of water in Egypt.

The *démenti* which has since been published does not seem in any way to have appeased the Wafdist Press, which continues its attacks. In this connexion the Italian Legation, which appears to have been alarmed at the effect of the *Mokattam* telegram, cabled to Rome for instructions, and has to-day issued a *communiqué* to the effect that throughout all the political crises which have taken place during recent years in Egypt both the Legation and the Consular offices depending from it observed the strictest neutrality in accordance with the instructions received from the Italian Government.

ROUMANIA.

Bucharest, November 27.

Opening of Parliament.

Parliament reopened on November 15 with the usual ceremony. In brilliant sunshine the gala carriages, Guards of Honour and several regiments of smart troops passed through the streets thronged with people, who

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

received the procession with loud acclamations. The House of Deputies, too, was crowded, and after the usual religious service, conducted by the Patriarch Regent, the Speech from the Throne was read by H.R.H. Prince Nicholas, who was received with loud applause.

The Message began with the customary formula of welcome to the deputies on resuming their duties and announced various commendable innovations in different directions. Mention was made of the Royal Manœuvres—the first since the War—which did credit to all ranks of the Army. The promise was given, in the name of the Government, to do all that was possible within the limits of the Budget, to improve the Army and military armaments. The Message also made mention of the gratifying success of the stabilisation of the currency, thanks to wise legislation, which had also succeeded so far in improving the financial situation that a budgetary balance could be confidently hoped for. Turning finally to foreign policy, the Message expressed the assurance that the country was firmly decided to maintain friendly international relations with the aim of preserving conventions already concluded or under negotiation with Great Britain, Italy, and Poland. The Prince Regent and the Prime Minister both received hearty ovations.

The Opposition, who had ceased to attend Parliament during last session, remained absent at the opening of the present session, so that the Government benches alone were filled.

The Budget.

The Government has worked very hard at the preparation of the Budget for next year, which will introduce a number of important economies with a view to obtaining a true balance and even a certain surplus. The Budget will be placed before Parliament in the course of next week, when every opportunity will be given of discussing its provisions—a procedure which has not been followed by previous Governments, who usually rushed their Budgets through the House, avoiding all discussion.

The three Ministerial vacancies that had arisen were filled just before Parliament opened. M. Madgearu has been appointed for the time being to the Ministry of Finance, which portfolio he had held *ad interim* since the resignation of M. Mihai Popovici; M. Aurel Vlad, Minister of Transylvania, has become Minister of Industry and Commerce; and M. Pan Halippa, Minister of Bessarabia, is appointed Minister of Communications. In this way the forces of the two parties forming the Government have been grouped to the satisfaction of both.

Church Congress.

The Church Congress which began its meetings last week has attracted a good deal of public attention. According to the statutes of this Congress a certain number of lay members are admitted to its membership. It appears that, under former Governments (all of them now in opposition), several important members of the present anti-Government parties were admitted to the Council of the Congress, and they have now taken the opportunity (some of them from religious conviction, and others, it is to be feared, for party reasons) of inducing a section of the members of the Congress to introduce a motion condemning the suppression of the Ministry of Religion, whose functions have been transferred to the Ministry of Education as a measure of economy. More-

over, in this motion the Government (most of whose representatives from Transylvania belong to the Greco-Uniate Church) is accused of favouring the latter Church to the detriment of the State Greek-Orthodox Church. In support of this motion a series of measures are quoted, such as that by which the estates of certain Greek-Orthodox Churches in Transylvania are said to have been transferred to Greco-Uniate Churches and the alleged preference given to members of the Greco-Uniate Church in the appointment of civil servants to posts in Transylvania. The Government is further accused of having encouraged the establishment of numerous Roman Catholic sects, such as the "Assumptionists." The daily Press accentuates the fact that the Patriarch Regent, Miron Christea, Head of the Orthodox Church of Roumania, withdrew immediately after having formally opened the meeting of the Congress, owing, they say, to the heated nature of the attacks against the Government on this subject.

The Congress requested the Metropolitan Ivan de Blaj to submit the motion to the Government.

Public opinion is greatly irritated against the politicians of the Opposition who are lay members of the Congress and blame them in strong terms for having introduced purely political considerations into the proceedings of a Congress which ought rightly to be devoted exclusively to Church matters. If the Clergy of the Orthodox Church have no complaints to make in regard to the questions raised, then why, it is argued, should these lay politicians interfere? The Press unanimously expresses the opinion that the Church should be allowed to look after its own interests, and that the interference of laymen, and especially of politicians, in Church matters should not be permitted.

Developments on a Royal Estate.

In the course of last week Prince Nicholas inaugurated a whole series of charitable and other public welfare establishments on one of his estates, that of Broshteni, which he runs in the true spirit of a gentleman farmer. He has introduced a number of improvements for the benefit of the peasants and farm labourers in his own villages and those of the immediate neighbourhood. These include a school, an evening school, weaving classes, domestic economy classes, experimental fields and laboratories for agricultural research, a flour mill, dispensaries, a hospital and a small maternity hospital, a lecture hall, a cinema with wireless installation, etc. All the members of the Royal Family were present at the charming opening ceremony conducted by the Metropolitan Pimen of Moldavia, whom the Prince had invited in order to avoid any party feeling, and also the Ministers and members of the Government and many important people of all parties. Many speeches were pronounced, and His Royal Highness was warmly congratulated upon his initiative and the high ideals that had guided him in founding these village institutions on his estates. In his reply to the speeches the Prince announced his intention of introducing the same reforms on all his estates. Princess Ileana has begun a similar systematic organisation on her own estate at Poeni in Moldavia.

Statue to King Ferdinand.

On November 9 in the town of Orashtie, in Transylvania, a statue was unveiled which has been erected by the population of the district to the memory of the late King Ferdinand, as Liberator of Transylvania and first King of Greater Roumania. This town was well chosen as the site for the statue, as it has for centuries been one of the centres of the Roumanian minorities' struggle against the rulers of Transylvania—a struggle which has been happily terminated by the annexation of the province to the mother country.

On a beautiful autumn day of brilliant sunshine great crowds swarmed in from all over the country to attend the ceremony. Queen Marie was present, also the Princess Mother, ex-Queen Elizabeth of Greece, Princess Ileana, Prince Nicholas, the Patriarch Miron Christea and his

co-Regent, M. Saratzeanu, the Prime Minister, M. Maniu, and members of the Government, members of the Diplomatic Corps and delegates from all the important institutions in the country. The statue is the work of the sculptor Ionescu Varo. It is a standing figure of the King, simple but majestic, and stands on a marble pedestal on which there is a bronze bas-relief showing Queen Marie tending the wounded.

THE HIJAZ.

Jidda, November 18.

Anti-Rebel Activities.

News from the interior indicates the early resumption of the punitive operations against Faisal al Duwish; but the most significant factor in it is that the Wahhabi King has assumed command of the operations himself. To the lay mind this might suggest difficulties ahead for the King; and difficulties there undoubtedly are, though they are not occasioned by the strength of the rebels, who are little more than a fugitive rabble doing such damage as they can by occasional raids. The real trouble is of a political nature, and the King has taken the command himself so as to be on the spot and in personal control in the event of complications arising. For some time past Faisal and his rebel band have been concentrated along the frontier of the Kuwait Principality; and it is towards that frontier that King Ibn Saoud will converge from all directions in the course of his drive. Now it is probable that the rebels will cross the frontier, relying on the Shaikh of Kuwait to afford them a temporary asylum; and it would seem equally probable that they will be pursued over an unmarked and undefended boundary-line by the troops of King Ibn Saoud, who can scarcely be expected to let their quarry so escape. An intriguing political situation will thus arise for the consideration of the British Government, which is, of course, interested in the status of Kuwait in view of its Treaty relations, and

is no less vitally interested in the final crushing of the rebel movement in Najd, the declared object of which is war against Iraq and Kuwait.

The State of Kuwait.

Observers here are wondering what situation would arise in the event of an armed clash between the Wahhabis and the troops of Kuwait. Conceivably a Wahhabi occupation of Kuwait might result, and it is interesting to speculate whether the Kuwait population, whose former prosperity has largely declined owing to the loss of all the valuable Central Arabian trade, which has now been deflected to the Wahhabi ports of the Hasa, would welcome such a result. Kuwait no longer enjoys the political importance which it formerly had owing to its strategic position at the head of the Gulf, and the opinion here is that it will die of inanition unless it joins the political system which controls its hinterland.

The Amir Faisal's Visit.

At Jidda the chief event to record is the arrival on the 16th of the Amir Faisal, who will be making a stay of about a fortnight here. A banquet of 72 covers was given in his honour by the Qaimmaqam on Monday, at which the representatives of all foreign Powers were present; and on Tuesday the Foreign Minister entertained the Amir and the foreign representatives at an informal tea-party. Other festive entertainments will be arranged at intervals during Amir Faisal's stay here; and for the rest he is fully occupied in attending to the various administrative questions which have been held up in anticipation of his visit. For a considerable part of the summer the Amir resided at Taif, which is rapidly becoming a prosperous agricultural centre under the care of a newly formed Agricultural Society.

New Treaties.

In the diplomatic sphere I have to record the ratification by the Persian Government on November 6 of the

Treaty of Friendship recently negotiated between Persia and the Hijaz and Najd; its ratification by the King is shortly expected, and the terms of the Treaty will be published. The Treaties concluded with the German and Turkish Governments during the past summer will be ratified in the near future.

The First Pilgrims.

The first two boats from the Dutch East Indies have arrived during the past week; and some 530 pilgrims represent the first-fruits of the opening season. The health record of the Hijaz during the past few months has been very satisfactory; and there have been very few cases of death from epidemic causes. The motor-transport companies are busy getting ready for the season, and are hoping to improve on the results of last year. The large Saudiya Company has gone into liquidation as the result of inefficient and extravagant administration; and the shareholders will be lucky if they recover 50 per cent. of their capital investment in addition to the 15 per cent. dividend paid last year. Three other companies have also wound up their affairs; but, on the other hand, I have received the official assurance of another company formed only last year that it has distributed a 48 per cent. dividend after setting aside 25 per cent. of the net profit partly to reserve and partly to pay bonuses to its staff. Such a result must be regarded as extraordinarily satisfactory, but many other companies have done quite well.

Hajji Zainal Ali Ridha.

I omitted in my last letter to mention the great loss sustained at the end of October by the Jidda community in the death of Hajji Zainal Ali Ridha, the elder brother of the Qaimmaqam and the head of the long-established firm which bears his name. It must be nearly sixty years since he first arrived from the Persian Gulf port of Linga with his brother (then eight years old) to start business at Jidda, and he was about 80 or 85 at the time of his death.

Last year his younger brother, Husain, died; and in the previous year he lost his son, Qasim, formerly a deputy for the Hijaz in the Turkish Parliament and one of the outstanding citizens of Jidda. Another son of his is Muhammad Ali, the well-known pearl merchant of Bahrain; and another son, Yusuf, is the head of his father's firm at Bombay. He was the head of a distinguished family, with all the members of which much sympathy is felt.

General News.

The King has headed the subscription list opened for the Arabs who have suffered during the recent troubles in Palestine with a subscription of £500.

The European community has been playing golf and even football (Association), though at the latter it was recently beaten decisively after a good game by 3 goals to nil. On November 7 the Soviet representative (M. Turacolloff) held a reception in celebration of the anniversary of the birth of the Republic. On the 11th the British Agent held a service at the British Agency in commemoration of Armistice Day, later entertaining the British community to dinner; and on the same day a tea-party was given by the Italian Consul to celebrate the birthday of the King of Italy. The European community now numbers no fewer than six ladies, two of whom as brides merit a word of welcome to Jidda.

CYPRUS.

Nicosia, November 20.

The Greek Deputation to London.

The Greek Archbishop, on receiving news of the unfavourable replies made, so far, to the mission, dispatched a telegram of protest to Mr. MacDonald, reiterating the unalterable resolution of Greek Cypriots to continue the struggle for union with Greece. Telegrams of protest have also been sent to the Prime Minister and the Secretary of State for the Colonies from the different towns, from Mayors, and clubs, and other bodies, and from individual members of Council, expressing similar sentiments, and hopes for the future.

According to information received, the members of the deputation have been actively engaged in their endeavour to influence public opinion in England, having had friendly interviews with various politicians and leading persons. Amongst others they had a pleasing interview with the late lamented T. P. O'Connor, who expressed his sympathy and promised that he would, if possible, write something in aid of their cause. The members were entertained in the House of Commons, those present including Lord Passfield, Mr. Snowden, Mr. Clynes, and Mr. Amery. They have also prepared for circulation a letter to Members of Parliament, and to leading journals, giving a condensed statement of the Cypriot "question."

The Bishop of Kition was cordially received and entertained by the Archbishop of Canterbury, to whom His Eminence handed a letter from the Greek Archbishop in Cyprus. His Grace made many inquiries regarding the Orthodox Church in Cyprus, the clergy, the monasteries, and other, especially ecclesiastical, matters. His Grace

Help Armenia

to forget the past with its incredible hatred and antipathy shown towards them, by concrete Christian sympathy and practical help which is most necessary in our effort to give constructive and humanitarian service.

Our Homes and Hostels at Aleppo receive poor Armenian Women and Girls rescued from Moslem Harems.

The Blind Institution helps a large number of blind—teaching them Braille and a trade, as well as ministering to bodily needs.

Orphanages at Beyrout and Shemlan are dealing with the terrible problem of the great number of orphans of the massacred Armenians.

FRIENDS OF ARMENIA

47, Victoria St., London, S.W.1

President:

Treasurer:

LORD RADSTOCK. S. F. HURNARD, Esq., J.P.

All cheques to be made payable to "Friends of Armenia"

handed to the Bishop a letter which he requested him to deliver to the Greek Archbishop Kyrillos.

The Cyprus Loan.

It is understood that the new Loan will be one of £150,000, and that it will be probably mainly devoted to public works, especially the asphaltting of roads. Dissatisfaction is expressed in many quarters, including part of the Press. There should be, it is said, no complaint, now, that the loan is too small. Rather there should be regret that there should be any loan at all, unless it is to be applied to those needs of the island which, in the view of the inhabitants, stand first in order of importance for island development.

The Kyrenia District.

The Greek member of the Legislative Council for the District, having written to the Governor to express the strong desire of the inhabitants that the decision to abolish the Commissionership (on the retirement of Mr. McDonald as Commissioner) might be reconsidered, has been informed that it has been decided (subject to the approval of the Secretary of State) to reappoint a Commissioner. He will, however, combine with his duties those of a Local Commandant of Police, hitherto separately held. Mr. O. G. Dennis is to take up the appointment on December 1.

The Executive Council.

The Council met on October 15, under the presidency of Sir Ronald Storrs, to discuss various draft laws, and also the coming Budget, which the public anticipates will contain many projects for public works, pointing, it is feared, to fresh burdens. The meeting of the Legislative Council will, it is presumed, take place on the return of the Deputation now in London.

Cyprus Wheat.

The island wheat is, it seems, in great demand. Buyers from Asia Minor have been visiting the island and taking considerable quantities, and the Agricultural Bank of Adana has purchased a large amount for seed. A special mission from the Ministry of Agriculture in Greece has lately visited Cyprus to purchase quantities. The *Cyprus Gazette* states: "In Greece it was found that Cyprus wheat produces 40 per cent. to 50 per cent. above indigenous varieties." In Asia Minor it is found that it ripens earlier than the indigenous kinds.

General News.

The Swedish mission of excavation has been continuing work at the site of the ancient Kition, and has discovered various objects of antiquity which will tend to throw further light on the period represented.

Major R. A. Baker has been appointed an additional A.D.C. to the Governor.

One of the most important diamond-cutting works of Amsterdam proposes to establish a factory in Sapon, Hungary, to supply the Central and East European and Balkan markets.

Indemnities claimed by Austrian subjects against the Roumanian Government, under the Treaty of Peace and the Law of Retention and Liquidation of June 13, 1923, are to be paid.

A draft Bill was last week introduced in the Greek Chamber providing for the formation of an Air Ministry. The Bill provides that successive Prime Ministers will be *ex officio* Air Minister, and will be assisted by a responsible Under-Secretary and Ministry, who will control military and naval aviation, special attention being paid to the development of civil aviation, for which a separate section will be formed.

It is stated from Athens that the official delivery of the six Hawker Horsley aeroplanes (Rolls-Royce Condor engines) which were ordered last April by the Greek naval air service took place at Tatpi aerodrome on December 2 in the presence of the British Minister, the staff of the Ministry of Marine, and members of the Greek Government. Successful trial flights were followed by demonstration flights made by Greek naval airmen.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association was held on December 6 at 55, Prince's Gate, by kind permission of Lady Newnes, to hear a lecture by M. Georges Cattaui, Secretary of the Egyptian Legation, on "L'Egypte: Ses Traditions et sa Renaissance." The Chair was taken by Sir Thomas Arnold.

M. Cattaui laid stress on the fact that four entirely different civilizations have succeeded one another in Egypt, and that, although each of these civilizations seems to be the expression of different races, still the unity of the Egyptians can be proved. The race, as the geographer Schweinfurth has remarked, presents so marked an individuality that it is most probable that this unvarying type is the product of the soil itself, and that the character of the peoples has been moulded by the influence of the climate and of the soil. People are apt to say that Egypt has always been ruled by foreign countries, because some of her rulers since the Ptolomies have been of foreign extraction; they are unaware of the fact that Egypt has always assimilated her invaders, who soon adopted the customs of the country. Among the immortal features of the Egyptian character are the sense of humour so vividly preserved in the Egyptian folk stories, and the unusual alliance of sobriety and prodigality—for the fellah will live on his onion and his date, and spend the savings of a lifetime on such things as the wedding festivities of his children or the funerals of his parents—the glorification of the dead, as may be seen from the raising here and there of a huge necropolis, such as the Tombs of the Mamelukes and of the Imam Shafei; and the intense religious fervour of the Egyptian and his mysticism. Fraser and Moret have proved the Egyptian origin of most of the Mediterranean myths, and Claud Field in his book, "Mystics and Saints of Islam," has stated that Christian asceticism took root in Egypt as well as Arab mysticism. Plato studied at Heliopolis for thirteen years, and the doctrine of Pythagoras on the science of numbers, now an accepted fact in the most modern science, was gleaned from Egypt. Some architects have also affirmed the introduction of the ogive in Gothic architecture by the Crusaders, who brought this from Egypt. Elliott Smith has gone so far as to assume that the civilization of Ireland in the tenth century was derived from Egypt, when the Coptic monks fled that country, after the Persian conquest.

Speaking of the revival of Egypt in modern times, the lecturer gave as the cause of this awakening the political factor of prosperity and good administration brought to the country by Mohammed Ali and his successors on one side, and on the other side the spiritual revival introduced by Shaikh Mohammed Abdu and his followers. He quoted the poets of Egypt during the last decades—Baroudi, Sabry, Chawky, Hafez Ibrahim and Moutram—and the more modern ones, Accad, Rami and Rassem. Among the scholars and scientists he numbered Falaky, Moubarek, Lutfi El Sayed, Mustafa and Ali Abdel Razek, Ghorbal, Wasef Ghali Pasha, etc.

During the lecture an Arab song was sung in the original by Mme. De la Rue-Mardus, and at the close M. Cattaui showed various slides illustrating the different phases of Egyptian art, also some paintings and sculptures of Naghi, Said and Moukhtar.

NEWS IN BRIEF.

The American Consul in Alexandria, Mr. Raymond Geist, has been transferred to Berlin, and will be leaving Egypt shortly with his sister, Miss Geist, to take up his new appointment in Germany.

Following a fit of apoplexy, M. Shaponitch, the Yugoslav chief delegate for the frontier negotiations with Bulgaria and formerly head of the Press Bureau, died in Sofia on December 5.

Four more leaders of the Muslim anti-Soviet organisation recently discovered in Central Asia were shot at Artemovsk on December 2. Eighteen others were sentenced to long terms of imprisonment.

The British seaplane G.A.A.S.H., which was forced to come down near Brindisi on December 4 while on its way to Athens to take up the Indian air mail, resumed its journey and arrived safely at Athens two days later.

The death is announced of Brig.-General Charles Philip Scudamore, who had served, among other places, with the Hazara Field Force and in the Tirah Expedition. During the Great War he was O.A.G. Egyptian Expeditionary Force.

Mr. H. L. Russell, at present American Consul at Casablanca, who, prior to being appointed to Casablanca, served in Saponika, Smyrna, and Rome, has been appointed to succeed Mr. Geist as American Consul at Alexandria. He is not expected to arrive in Egypt till next February, and in the meantime Mr. J. J. Touchette, Vice-Consul at Alexandria, will act as Consul.

The death occurred on December 7 of General Sir Charles Monro, who earned the widest fame for the safe withdrawal of the British forces from Gallipoli in 1915. He had seen very considerable service, and was one of the most prominent figures of the War. In 1916 he went out to India as Commander-in-Chief. In 1923 he was appointed Governor and Commander-in-Chief of Gibraltar, from which position he retired last year.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 21.

The Allahabad Meeting.

The leaders of the Indian political parties "in opposition" (one cannot call them collectively the Opposition, because some of the parties are divided from the Government only on the question of the composition of the Statutory Commission) were so far moved by the Viceroy's pronouncement, that they met at Delhi, and drew up the reply with which you are all now familiar. The debates in the Houses of Parliament were followed here by another meeting of the leaders, this one in Allahabad. The proceedings were not open to the Press, and if reports have appeared in the newspapers, they have invariably been followed by a letter from Sir Tej Bahadur Sapru, denying their accuracy. This much is certain, however, that, while the opinion was strongly held that the debates have altered the situation for the worse from those persons' point of view, so that in their opinion a revision of the Delhi letter was called for, the opinion was as strongly held that any stirring up of mud now might ruin the chances of a Round Table Conference ever being held. The Congress Party has decided to defer taking action, if any is ever taken, until the meeting of the Congress at the end of December. No other Party will act before it. When it does act, the other Parties will join with it, or break away from it. If it never acts, it will lose those of its members who have most leanings towards Independence.

The Trend of Opinion.

As far as I can judge, the stronger trend of opinion is towards reconciliation with the Government. Two influential leaders, Mr. Jinnah and Mr. Jayakar, withheld their signatures from the Delhi letter. In their view it was a mistake to try to bargain with the Government before the convening of the Round Table Conference, while holding over the head of Government an only slightly concealed threat that, if their conditions were not agreed to, they would refuse the invitation to the Conference. Some of those who did sign it, did so, one imagines, from the standpoint that the letter committed them to so little, it was not worth while refusing to sign it. Some were much less concerned that the doubt as to the time when Dominion Status will be granted should be cleared up (that was what Mr. Lloyd George saw as what the signatories to the letter had most at heart), than that the chance should be secured of obtaining a general political amnesty.

The Amnesty.

I have been talking with one of those who attended the Allahabad meeting, and is now at home again. He is one of the most influential of them; for whatever he decides to do, several others with influence in India will do too. To judge from his talk, the amnesty is the question most agitating the majority. The Indian has often a very soft heart; he is much less likely than we are to think that, if men have got into trouble with the Government of the country they live in, they must take the consequences. The Indian is so soft-hearted that, when the alternative is to say a student has failed in an examination or to give him the "grace marks," and say he has passed it, he will usually give him the "grace marks." He cannot bear to give hurt. So the persons in India sentenced under that Section 124 (a) of the Penal Code, or under trial and likely to be sentenced under that section, are very much on people's minds. Even those are, too, convicted under Regulation 111 of 1818, if many fewer hope to see the desired amnesty extended to them. The matter is complicated by that tendency that I have remarked on for the Indian to be swayed by a phrase. The phrase operative at the moment is "to secure a favourable atmosphere for the Round Table Conference." No political

amnesty now granted would make any difference to its deliberations after, say, the first half-hour; but you will find men here moving heaven and earth "to secure a favourable atmosphere" for it. The words will be as dry as so many old bones long before they cease to recur daily in almost every newspaper. Some will be cheering on the attempt to secure the atmosphere, others will be jeering at the attempt.

The Child Marriage Act.

The Muslim agitation against the Child Marriage Act, or its being the law of this land for the Muslims as well as for the rest of us, has been carried to the point of a strong deputation waiting on the Viceroy. The argument is that as the Church and the State, or religion and the law, are one in Islam, the marriages of Muslims must be governed, not by any law of British India, but by the Quran and the Traditions. In a statement that Maulana Mahomed Ali handed to the Viceroy it was said that the boundaries of Allah must never be transgressed. The Viceroy pointed out, in reply, that there are questions, the marriage question being one of them, that are borderline questions between sociology or civics and religion. There are many Muslims, however, whom you will never get to say "yea" to that. They will reply that they know of no such thing as sociology; they know only of religion; and they will have behind them what may be called "dogmatic obscurantism" of a more determined kind than one can find anywhere outside Islam. It was that "dogmatic obscurantism" that caused King George's Dock here to be altered (for the worse, unfortunately) in design. There was a Muslim prayer house in the way.

The Logical Consequences.

I asked the same political leader, on his return from Allahabad, what he thought of the argument of Maulana Mohamed Ali and the deputation; whether he himself was for them or against them. He was against them, he told me, and he went on to say that the consequences of yielding to the Muslim opposition to the Child Marriage Act, if carried to their logical conclusion, would be that most of the Penal Code would have to be scrapped for Muhammadans; for their religion commands that the punishment of theft should be the cutting off of the thief's hands; adultery would have to be punished by stoning to death, and so on. Then *sati* (suttee) would have to be legal for Hindus. We should be put back to the fourth or fifth century of our era.

Communalism.

My friend passed on to a much wider question, that of the strength of communalism in India. "If you scratch his skin with a pin," he said, naming a leader among the orthodox Muslims, "you will find a passion for the Islamisation of India; if you scratch *his* skin (here he named a leading Pandit) you will find a passion for the Hinduisation of India." There are even such men, I am afraid; men on one side who would like to see all the Hindus made Muslims; men on the other who would like all the Muslims made Hindus. To know what the effect of such passion is in Indian political life, you must throw your minds back to the time in England before Catholic Emancipation, when the Protestant fear was that, if the Roman Catholics had the power, there would not long be Protestants left in the land. You must throw your minds back to that date, while remembering that the present-day Muslim's fear of the Hindu, the Hindu's fear of the Muslim is far greater than ever Protestant fear was of Rome. My friend ended with the striking statement that for the Nationalist Party, the one to which he himself belongs, there is no room in India. India, he said in other words, cannot be a nation, one nation. It is too deeply divided.

Colonel James Ainsworth Yates, C.I.E., D.S.O., Indian Army, died suddenly at Maymyo, Burma, on December 1. He was on the Staff Corps when the Great War broke out, and was made D.A.A.G. He was in the operations in Iraq in this capacity from August, 1916, to the end of campaigning in that country, including the Arab rebellion in 1920.

THE "UNKNOWN INDIA."

The political importance of that "Unknown India," consisting of the Indian States, has now been officially recognised, and is no longer open to question. Addressing the Overseas League at Vernon House, Park Lane, on December 4, Professor L. F. Rushbrook Williams said that the correspondence exchanged between Sir John Simon and the Prime Minister made this recognition the basis for the forthcoming Round Table Conference on Indian affairs, to which all political parties in Britain had given their approval. He believed that it was essential for the men and women of Britain to know something more than they did about this great portion of India, more than one-third of the entire sub-continent, which circumstances were now bringing into such prominence.

Professor Rushbrook Williams then sketched the historical background of the Indian States, designating them the modern representatives of those small semi-autonomous kingdoms which had always played so large a part in Indian history. He outlined the growth of their relations with the British, and distinguished the different stages of our policy towards them. Emphasising the unfaltering discharge of their treaties and engagements with the Crown, he laid stress upon the services they had rendered at any crisis in the Empire's fortunes. Their statesmanlike view of the value of India of the British connexion had never, he said, at any time been in doubt, and at the present moment was such as to expose them to attack from certain quarters. They had nevertheless certain modifications to suggest, modifications designed to deal with well-recognised difficulties in the system by which their relations with the Crown were managed; and it was for this reason, among others, that they welcomed the approaching Conference.

The Indian Princes were not, the lecturer concluded, afraid of Dominion status as the goal of British policy in India, for they were proud of their country and zealous for its attainment of an honourable place in the British Commonwealth. But they also looked to Great Britain to see that their cherished rights were not endangered.

Mr. L. S. Amery, who presided, reminded the audience that all the Indian States had great traditions and renowned dynasties, some older than the oldest States of Europe. Not the least of their traditions was one of steady loyalty and good will, tested on many occasions, to the British Government.

Having regard to their record and their importance, it was impossible, he said, to arrive at a final settlement of the Indian problem without taking into account the position and treaty rights of the Indian States.

HEARSAY HISTORY.

If further proof were needed of the Viceroy's wisdom in rejecting at once the claim of the self-styled representatives of Indian States' subjects to representation on the Round Table Conference, to which reference is made elsewhere in this issue, it would be provided in a recently-published book* by one of the leaders of the so-called Indian States Subjects' Conference. Professing to deal with the whole question of "Indian Princes under British Protection," the author, Mr. Chudgar, has drawn together a mass of hearsay evidence, which he uses as an excuse to indict not only the Indian States, but also the Political Department which is responsible for their supervision. The value of this material and the real nature of the propaganda may be judged from the fact that Mr. Chudgar reproduces without a word of qualification certain wild allegations brought against Prince "Ranji," which have been officially contradicted and subsequently repudiated as mere hearsay by the quarters responsible for giving them currency.

Mr. Chudgar's general attitude towards Indian ques-

* "Indian Princes under British Protection." By P. L. Chudgar. (London: Williams and Norgate. 6s.)

tions may be judged with sufficient accuracy from two sentences on a single page. The first is: "Indians are treated with contempt and kicked in every part of the world as in their own country, while every foreigner can exploit them as freely as he likes." The second is: "If social conditions are bad, if there are untouchables, and if the people are over-superstitious, it is all due to the illiteracy for which the British administration is responsible." The book is sponsored by Col. Josiah Wedgwood in a characteristic introduction, which would be humorous were it not for the pathetic ignorance which it displays of the real conditions of the States.

LORD GOSCHEN'S APPEAL.

An eloquent and forceful appeal for a wider appreciation of the industrial and economic progress of India was made by Lord Goschen at a dinner of the Weavers' Company in the Vintner's Hall on November 26. After referring to the historic connexion between the City of London and India it was, he said, one of India's misfortunes "that the general public of this country are not in close touch with its current events and daily life."

"When the atmosphere is bright and calm," the late Acting Governor-General proceeded, "the public here is apt to slumber, heedless of the growth which is being made; but from this state it is aroused by the noise of local thunderstorms, which arouses its interest and naturally causes it anxiety. I do not desire to belittle the intensity of the storms or their constant recurrence; I only plead for a wider and more constant interest."

"I ask that the silent efforts of our friends, Indian and Europeans alike, who are continuously working to promote the moral and material prosperity of India should not be overlooked—those politicians in India, Indian and European, who are endeavouring in a spirit of give and take to work a system of government which has always been regarded as of a temporary character; those men who are engaged in promoting and administering great industrial undertakings which have added and are adding to the wealth of India, and are improving the conditions under which her people live; that great body of the I.S.C. who loyally, unobtrusively, and in difficult circumstances are striving to assist in the solution of the problems which confront us; the big landlords, who are loyally helping us, and all those who with breadth of vision are seeking for peace."

"To these let us offer encouragement, the encouragement of knowing that their efforts are realized and appreciated, and assure them that the people of this country, fully alive to the gravity and seriousness of the position, earnestly desire that our policy with regard to India should not be caught in the maelstrom of party politics, but that we should face it calmly and patiently in the spirit of common purpose and joint endeavour."

Acting on medical advice, Sir Venkata Reddi, Agent General for India in South Africa, left for India on December 2 on three months' leave.

Sir Frederick Sykes, Governor of Bombay, presided on December 6 at the 125th anniversary celebration of the Bombay branch of the Royal Asiatic Society, when a portrait of Sir James Mackintosh, Founder and first President of the Society, was unveiled.

Lieutenant-Colonel Sir George Schuster, Finance Member of the Executive Council of the Governor-General of India, accompanied by the Hon. Lady Schuster, is due to reach Bombay to-morrow on his return from a visit to this country of less than three weeks. He has held consultations on current financial questions with the authorities of the India Office, and has also discussed various matters with Mr. W. T. Layton, Financial Assessor to the Simon Commission.

India is helping to popularise the weekly England-India air mail service by issuing special stamps, the first of which arrived on the mail reaching this country a fortnight ago. They are of an entirely new form for India, being of transverse oblong form, showing one of the mail planes in flight over the ocean. They retain, however, in the right-hand portion of the frame, the crowned profile of the King which is common to all the Indian Imperial postage stamps.

THE WEEK AT HOME

London, Tuesday Morning.

"Pep" in Parliament.

There are times when the parties in Parliament seem implacably opposed to one another, and last week there were several manifestations of such difference of opinion as might lead the observer to imagine that friendship between rival politicians was an impossibility. For instance, the refusal of the inclusion of the Lord Chief Justice, as the nominee of the Liberal Party, in the Commission to examine Electoral Reform, involved a shower of abuse on the serene head of Mr. Baldwin. A subject which produced even more fury was that of relations with Russia.

In the Lords several anti-Government speakers denounced in the strongest terms the decision to resume diplomatic relations with Russia. The attack on the Government was, indeed, furious. Lord Birkenhead, a skilled campaigner in verbal warfare, led the attack, and in biting words, much, apparently, to the liking of the Lords, endeavoured to make mincemeat of the argument in favour of healing the breach with Russia. It would seem, however, that too many Conservatives themselves now are coming to believe that at best no harm can come from resuming relations with Russia for the tirades of the Lords to have much effect upon the country.

Another speech which fluttered the dovescotes came from Mr. Lloyd George, who roused much Conservative sympathy, in a speech upon Disarmament, by referring to the danger that the League of Nations was in of "being run by flapdoodlers." The ex-Prime Minister is so curious a mixture of sentiment and realism, that he may easily have, as cheerers of one speech, the denouncers of his next. By the Liberal Party his reference to the League has been taken amiss, but on the whole it has probably done more good than harm.

The Bottomless Pit.

If there is one man in the Labour Party who knows that you cannot take out of a thing more than you put into it, it is Mr. Snowden, Chancellor of the Exchequer. Naturally, he is having difficulties with certain of his followers who appear to imagine that the Exchequer is a bottomless pit, from which the worthy poor may draw indefinitely. But upon this particular heresy Mr. Snowden has just put his foot down firmly.

Even as things are, the Budget next spring will be difficult to balance, and so Mr. Snowden has cried "Halt"

to those who wish for still further expenditure on behalf of the unemployed. It is said, indeed, that last week he actually threatened to resign if his point were not carried. In the event, the Trade Unionists who were supporting the increased expenditure rallied to the Prime Minister's appeal to be loyal to the Government.

But while the amendments which would have increased expenditure under the Unemployment Insurance Bill have been resisted, the Government has accepted certain modifications which, it is claimed, very considerably improve the Bill. It is being asserted, in fact, that so good a Bill could have been produced only under a minority Government, and hopes are being entertained that the House of Commons, in which every member should be a legislator, is actually coming into its own in the present Parliament. No doubt the ills resulting from the abuse of an overwhelming weight of party machinery are less manifest in this Parliament than in any since the War, but whether this fact will be recognised and remembered by the populace at the next General Election remains to be seen.

The Gale.

Not many people, certainly not those who lived in the South and South-West of England, will forget the gale that raged last week. With a "record" wind, blowing at nearly 110 miles an hour, it created terrific havoc. Worst placed of all, as always, were the men at sea, many of whom were lost before lifeboats could reach them, or because the seas were so mountainous that lifeboats could not reach them. Of all heroic deeds in peace time, perhaps those performed at sea are the grandest. Certainly the courage of men at sea during this gale moved the vast population of landlubbers in an unusual way.

On land, floods of course were common. Houses and property were swept away, and many families left homeless. Crashing chimneys and trees caused several deaths. Roads became impassable; windows were staved in; almost every new-built house, with its unseasoned timber, leaked badly. It was, indeed, an unforgettable time.

Billiards as an Art.

There are few Englishmen who do not keenly relish a game of billiards—which consists of a hundred up, usually performed in something under the hour. They knew, of course, that there did exist queer professionals who scored at a rather faster rate than this, but not until Lindrum, the Australian, burst upon London, did they realise fully that billiards can be much more an art than a game.

This Lindrum is a perfectly amazing fellow, who has more or less dwarfed our own incomparable Smith. He goes round the table making nursery cannons more quickly than the marker can score them up. Breaks of a thousand are as nothing to him. He makes about 2,000 in an hour. There is no doubt whatever that he is the finest player in the world. What is the secret of it all? There is no one answer, but what is most obvious to the hum-drum observer is the delicacy of his touch, which reminds one of Gieseking or Hoffmann at the piano.

Bus and Coach Fares.

There is always an explanation when, under a new monopoly, or under something that approaches a monopoly, prices go up. So the word of warning has already been issued that, owing to the agreements between the main bus-owning companies and the main line railways, there will be a rise in bus and motorcoach fares. The smaller concerns, it is officially pointed out, have been able to cut prices owing mainly to three things: overworking the drivers, using unsound vehicles, and the travelling of buses at an unlimited speed. When the Traffic Bill, of which I have recently written in these columns, becomes law, the advantages which these smaller concerns now possess will automatically disappear.

So is to end the rivalry between rail and road that at one time threatened to be desperate. ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

December 12, 1929 (New Style).

November 29, 1929 (Old Style).

Rajab 10, 1348 A.H., of the Muslim Calendar.

Kislev 10, 5690, of the Jewish Calendar.

Sir Archibald and Lady Birkmyre leave London to-day for India.

Miss Josephine Plows-Day has left London for a short trip to Egypt.

General Sir Reginald Wingate arrived at Southampton on December 6 in the Asturias on his return from Lisbon.

The Marquess of Northampton left Tilbury on December 6 in the P. and O. s.s. Ranpura for Port Said.

Sir Thomas Strangman joined Lady Strangman at Marseilles. They sailed for Bombay in the P. and O. s.s. Mantua.

Mrs. Fred Nicholson, Miss Eileen, and Miss Joyce Nicholson left London last Friday in the Ranpura for Egypt.

Lord and Lady Melchett, who will spend Christmas at Melchet Court, will sail for South Africa in the Windsor Castle on January 10.

Prince Habib Lotfallah left London on December 7 for Paris on his way to Cairo. He will return to England in February.

Lady Grizel Hamilton left Tilbury on December 7 in the Orient liner Orsova, which is sailing for the Mediterranean and the East.

Brigadier-General and the Hon. Mrs. Warner and Miss Felicity Warner have left London for a tour in the Near East and will not return until March.

Lt.-Col. Sir Arnold Wilson delivered the "World after the War" Lecture at Morley College on December 6, taking as his subject "The Middle East."

The Secretary of State for India has appointed Mr. W. W. Henderson, M.P. to be his Parliamentary Private Secretary.

Dr. Pozidar Pouritch has been appointed Counsellor to the Yugoslav Legation in London. He was formerly Chargé d'Affaires of the Legation at Washington.

A reception will be held by the Yugoslav Minister at the Yugoslav Legation on Tuesday afternoon, December 17, in honour of King Alexander's birthday.

M. Dimitri Stancioff, former Bulgarian Minister to the Court of St. James, and Mme. and Mlle. Stancioff, arrived at the end of last week at Blair Drummond, Perthshire, on a visit to Sir Kay and Lady Muir.

Sardars Shah Wali Khan and Ahmed Ali Khan, the Afghan Ministers-designate to the Court of St. James and the French Republic respectively, leave Bombay for Europe on December 14.

Dr. Pollock, Bishop of Norwich, is leaving England shortly for a holiday in Palestine and the Near East. On Christmas Day he will preach at the morning service in St. George's Cathedral, Jerusalem.

Lady Honor Guinness, who is going on a visit to the Viceroy of India and Lady Irwin, joined the s.s. Mantua at Marseilles on December 7 on her way to Delhi. She is accompanied by the Hon. Richard and the Hon. Anne Wood, son and daughter of Lord and Lady Irwin.

Lord Lloyd presided on December 3 at a dinner given by the Royal Empire Society in the Hotel Victoria to members of the British Association on their return from the recent meeting of the Association in South Africa.

Sir Philip Sassoon, M.P., will give a lecture (illustrated by lantern slides) entitled "The Third Route" (an account of a journey to India and back by flying-boat and aeroplane), at the Wigmore Hall, Wigmore Street, at three o'clock, on December 14, in aid of the Royal Northern Hospital, Holloway. Tickets may be obtained from the Secretary, 25, Park Lane, W.1.

The first meeting of the Committee of the Golden Fleece Ball to raise funds for the Save the Children Fund's Anti-Trachoma Clinics in Greece, took place on December 5, at the house of the Chairman, Sir John Stavridi, 33, Lennox Gardens, S.W. Ex-King George, of Greece, and ex-Queen Elizabeth have signified their intention of being present at a reception in connexion with the Ball at 33, Lennox Gardens on December 16.

At a luncheon given by Abdel Malek Hamza Bey, Egyptian Chargé d'Affaires, at the Royal Egyptian Legation on December 4, in honour of the Hon. Sir Ronald Lindsay, the guests included the Turkish Ambassador and Mme. Ferid Bey, Sir John and Lady Hanbury-Williams, Sir Victor and Lady Wellesley, A. M. Hasanein Bey, Mr. and Mrs. Selby, Mr. J. Murray, A. F. Assal Bey and Mme. Assal Bey, R. A. Radi Bey and Mme. Radi Bey, G. Cattau Bey and A. K. Safwat Bey.

The new Yugoslav primary education law, which divides primary schools into lower primary and higher primary and provides for four years' attendance at each, has received the Royal signature.

The Bulgarian Ministers of Foreign Affairs and Finance, M. Bouroff and M. Moloff, left Sofia last week to get into touch with the Governments of the Powers, and to make a final attempt to obtain a satisfactory settlement of Bulgarian reparations. The two Ministers are visiting Rome, Paris, and London before proceeding to The Hague, where they will represent Bulgaria at the second Hague Conference.

The Times Belgrade Correspondent reports that the law creating a new body to be called the Yugoslav Sokol (athletic organisation) was published on December 5, comprising adult Sokol organisations, young men's Sokol organisations, and children's Sokol organisations. All are to be united into one organisation under a board appointed jointly by the Minister of War and the Minister of Education. The funds for the maintenance of the Sokols will be partly contributed by the State. Existing Sokol organisations will be dissolved within three weeks from that date (December 5) unless within that time they join, as component parts, the new Sokol.

Book Review

CHRISTIAN AND MUSLIM INTERACTION IN THE NEAR EAST.

"CHRISTIANITY AND ISLAM UNDER THE SULTANS." By the late F. W. Hasluck. Edited by Margaret M. Hasluck. Two volumes. (The Clarendon Press. 63s. net.)

The study of religion and folklore in the Near East owed much to Mr. Hasluck. It is not the least calamity in this connexion that his premature death, largely due to his devoted efforts to serve his country during the War, made it impossible for him to give the result of his researches to his fellow-students during his life, except in the form of stray articles to various technical journals. His books were all still in the making. Had it not been for the splendid efforts of his equally gifted wife, we should have had neither his valuable work on Mount Athos nor the one now before us. It is, therefore, mainly to her work of piety that we owe this wonderful storehouse of original research and, indeed, her own work on it has greatly added to its value. How he worked and toiled at his favourite theme up to a day or two before he was taken from us is already known to those of our readers who are acquainted with the delightful and touching volume of letters to his friend, Professor Dawkins, which we recently had the pleasure of reviewing in these columns. The rescue of the notes resulting from this work and their presentation to students in something like consecutive form is due to Mrs. Hasluck's determination and scholarship.

The title of the book and the heading which we have given to our review will sufficiently indicate the nature of the contents of the book. Technically, what we have before us was intended to form two separate works. One was to have been on "Transferences from Christianity to Islam and *vice versa*," while the other was to have been "Studies in Turkish Popular History and Religion." Of these, the former was nearly completed, while the latter was quite unfinished. Wisely, the subjects being so nearly related, Mrs. Hasluck decided that it would be best to fuse the two into one. This must have been a difficult task, and we need not cavil if we sometimes feel that it was almost an impossible one and that many of the chapters, and these often not the least valuable, rather hang "in the air." While, therefore, much of the book is a fine literary composition, parts of it are merely notes of valuable material prepared for the final treatment which death grudged to them. Seven years of his life were devoted to this book, and for the last five he was in the grip of the illness which took him from us.

As it stands now, we have three main subjects presented. The first and most complete deals with the interaction between Islam and Christianity as shown mainly by the transference of Christian sanctuaries to Muslim occupation and by the frequentation of Christian sanctuaries by Muslims and *vice versa*. It is curious to note how political tendencies seem to have had no influence on these phenomena, while the human desire for healing is so often at the bottom of them.

The second concerns Turkish religious folklore, pure and simple, such as cults of stones, trees, caves, tombs of holy men and saints (true, false and purely imaginary), together with the odd changes which Christian adoption of many of these cults brought with it.

The third gives a careful and much needed account of the important order of Bektashi Dervishes and their curious connexions with the Janissaries and with Christians, while we are also given a most interesting account of various heretic Shiah tribes who appear to have derived many of their peculiar beliefs from Christian influences.

Finally, we have the chapters which we described above as being rather "in the air." Among them the most important deal with the attitude of the Seljuk monarchs towards their Christian subjects at Konia, the graves of the Arabs in Asia Minor, the mosques of the Arabs in Constantinople, the so-called tomb of St. Polycarp at Smyrna (this is a thrilling piece of detective work), the blessing of the waters at Epiphany and the Neo-Martyrs of the Orthodox Church.

The spirit of the book is made clear by the following extract from the author's introduction to the second part of the book:—

The interest of the subject seems to me considerable, as disclosing, not, as might be expected, picturesque "survivals" from antiquity, but as bringing into prominence certain points which have been unconsciously kept in the background by the in some ways over-logical methods pursued by recent research. . . . Apparently primitive features may be in reality of recent origin, secondary phenomena may become primary. . . . Irreconcilable legends may circulate at the same time in the same place; it occurs only to a small class to unify the whole cycle of current legend, and this class, though not necessarily dishonest or interested, is still credulous and uncritical. Analogies in ritual and legend, however apparently exact, seldom or never amount to proof of common origin, entirely different origins leading through various developments to identical results. The two creative forces—the popular and the learned (which are often equivalent to the lay and the priestly)—have been at work in some form on religion as far back as we can see. In Turkey they can still be seen at work. It is this which gives to these Turkish studies a more than local interest.

We have marked numerous passages in the book, but have no space to quote them. Especially do we regret the impossibility of reproducing in full a delightful chapter which may be described as a paragon on the subject of "Western Travellers Through Eastern Eyes." A few sentences of it must, however, be given to illustrate the author's light touch. It concerns a story told to Hamilton by his guides at Everek, near Caesarea, in 1836.

A traveller, they told him, once came from Frangistan, in search of a rare plant which grew only on the summit of Argæus, having ten leaves round its stalk and a flower in the centre. The plant was guarded by a watchful serpent, which only slept one hour out of the four-and-twenty. The traveller in vain tried to persuade some of the natives to accompany him, and point out the way: none of them would venture, and at length he made the ascent alone. Failing, however, in his attempt to surprise the dragon, he was himself destroyed. He was afterwards discovered, *transformed into a book*, which was taken to Caesarea, and thence found its way back to Frangistan.

The true story turned out to be that a highly respected American missionary, Mr. Grindley, who had served in that neighbourhood for some years, set out in 1827, i.e., only nine years before to climb the neighbouring mountain, overdid it, and finally succumbed in his own bed to the effects of exhaustion. "It is some consolation," says Mr. Hasluck, "to the Western traveller, who often feels himself but a commonplace person in the East, to realise that he also may become in the mouths of the people the hero of such a fantastic, if ill-starred Odyssey."

We cannot close this very inadequate review without thanking Mrs. Hasluck for her fine bibliography, and specially for the magnificent index which adds enormously to the usefulness of the book. It is not, we think, every publisher who would have consented to produce so valuable an accessory, but we are accustomed to scholarship prevailing over economy in the Clarendon Press, to which also we owe the exceedingly handsome presentation of Mr. (and Mrs.) Hasluck's *magnum opus*. We cannot doubt but that this reward is just the one which the author would have appreciated. He wanted none, but ungrudgingly gave all that was in him to his loved work, with no ambition for himself and content if he could but carry the torch on a stage further in the race. C. S-W.

ARAB AND JEW IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your "Notes of the Week" of November 28, under the heading, "Arab and Jew," the statement is made that the best Arab opinion recognises the existence of the Jewish community in Palestine—and similarly, the best Jewish opinion recognises the existence of the Arabs in Palestine, and so on.

On the part of the Arabs, history testifies to their recognition of the Jews living among them and to their tolerant treatment through all ages, while other races were persecuting the Jews. But as to the recognition of the existence of the Arabs of Palestine in their homeland by the best Jewish opinion, one stands staggered at the gigantic pretensions of the Zionists and their sympathisers implied by this statement, if it rightly represents the working of the Jewish mind in this controversy. How graceful and tolerant of the Jews, mostly aliens to Palestine, to recognise the existence of the Arab in his home!

It cannot be declared too often that the Arabs of Palestine have nothing against the Jews as Jews settling down among them in the ordinary way. But with the Zionist policy of a National Home they have never ceased to proclaim to all concerned that they can have no compromise. They simply refuse to acknowledge it. Its success in face of their attitude can be secured only by coercion—if the British taxpayers are prepared to foot the bill.

People in Great Britain have been fed too much with Zionist propaganda to understand the position of the Arabs in this case and their determined opposition to a policy calculated to impose upon them domination in the political and economic spheres by an immigrant community directed by an alien organisation backed by millions of international money.

One thing, and one only, it seems to those who know the Arab and his character well, will restore social and political peace in Palestine, so much desired by the people of this country, viz., the renunciation of the militant National Home policy, economically as well as politically, by the Jews themselves. Until such renunciation is honestly made, accompanied by the stoppage of assisted immigration and the abandonment of the acquisition of land by foreign money, no *rapprochement* between the two sections of the population can, it is feared, take place.—I am, etc.,

A. H. KISBANY.

November 29.

31, Major Street, Manchester.

THE INHABITANTS OF PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Mr. Hussey's letter, contained in your issue of November 14, on the origin of the Fallahs (farmers) in Palestine greatly surprised me. It seems to me that Mr. Hussey is not well acquainted with the subject on which he writes. This propaganda, however, will not mislead the enlightened readers of THE NEAR EAST AND INDIA.

It is erroneous to say that the Fallahin (farmers) descended from the Canaanites, because the old Canaanites were driven out from Jerusalem at the time of David to Iraq with the Jews in their Babylonian captivity. Some of them, however, returned to Palestine with the Jews who were freed by the great Persian Emperor Cyrus, but their return is not recorded because their number was too insignificant to be mentioned. Those who returned with those in the country were absorbed by the very many victorious nations that conquered Palestine and settled in it for a time; and afterwards by the overwhelming majority of the Arabs who conquered Palestine and made it their home since.

The Effendi class is only the enlightened minority of the Fellahin (farmers). This term was given by the Turks to those who could read and write. Thus there is no difference between the Effendi and the Fallah, for when a farmer is educated he becomes an Effendi, and all the Effendis who are defending the cause of their country were farmers at one time.

The Christians are also Arabs who were converted in the time of the Romans. As for their being descended from Pullanis, this name is not known in this country. It is very easy to prove the Christians in Palestine to be Arabs, because if we take the family tree (family line of ancestors) of any Christian, we find it runs to the time when the ancestors of those concerned came from Yaman or Najd. In fact, all the farmers and the Effendis have the same line of ancestry as their Christian brothers. Now if anyone goes to the villages where these Fallahin (farmers) live, he will find two divisions: the first call themselves Najdiin (from Najd), and the second call themselves Yamaniin (from Yaman). This fact proves the fallacy of Mr. Hussey's argument.

Another point which proves the fallacy of Mr. Hussey, is that he could call the Fallahin (farmers) in Palestine only by the name of Arabs, for these people settled in this country centuries ago, and they do not speak anything but Arabic. Another thing—could Mr. Hussey call an Englishman a Norman or a Roman, because many of the inhabitants of the British Isles are descended from Norman and Roman stock? The answer is, simply, No; because with the passing of years they were assimilated, and consequently became true English people. The Palestinians are no exception to the rule of assimilation.—I am, etc.,

J. R. HAYDAR,

Principal of the Najah National School, Nablus, Palestine.

THE IDEALS OF ISLAM.

Lecturing before the Central Asian Society on "Islamic Ideals" on December 4, Professor D. S. Margoliouth began by discussing the relations between Muslims and Christians. He quoted Mr. Eldon Rutter to the effect that "The Christian is more hated throughout the Islamic world than is Iblis himself," and the statement of M. Michaud Bellaire, who has profoundly studied Islamic Northern Africa, that "Hatred of the infidel Christian is the fundamental argument whereon the whole policy of the Government (of Morocco) is based." In Palestine, however, where the Muslims and Christians had a common interest in resistance to the Zionists, there appeared, superficially at least, to be a very different spirit. A lecture delivered in 1927 by Sayyid Abdullah Mukhlis sought to prove that Christian and Muslim had always been friendly and would have remained so but for European intervention.

The truth was, concerning Muslim-Christian relations, that conditions in each country would always decide what they would be, apart from Quranic texts and traditions. In the Prophet's time the hostility of his system to the Jews was far more vehement than to the Christians, but the course of events speedily altered this. The Muslim attitude depended on the politics of the time. The Christian and Muslim populations of Palestine both resented the Balfour Declaration, because it appeared to bestow on the Jews rights which the rest of the population were not to share, and was interpreted to mean that the land belonged to the Jews, who out of their kindness might tolerate the others as aliens.

Texts of the Quran could be quoted in favour of the theory that the ideal of Islam was the unity of Muslims against all who did not belong to this community. Yet practically all Muslims belonged to a particular sect; even in the first century of Islam we read of a sect which, while sparing Jews and Christians, massacred all Muslims who did not belong to it. The Prophet devised a system, indeed, for perpetuating the unity of Islam, viz., the religious capital to be visited by every Muslim.

The lecturer then examined the problem presented by the occupation of the Holy Places by the Wahhabi, whose tenets were so different from those of many Muslims—particularly in regard to the veneration of tombs and the intercession of saints. In connexion with the visitation of tombs, he quoted with considerable approval F. W. Hasluck's recently published "Christianity and Islam under the Sultans," in which the thesis was maintained that a deliberate scheme was undertaken by Muslims for the attraction of Christians into the Islamic fold by affecting reverence for Christian shrines. This thesis, however, Professor Margoliouth could not accept; and he mentioned, as parallel cases, the turning of pagan deities into Christian martyrs, and the taking over of the ceremonial of the Pilgrimage by the Prophet Muhammad.

Examination was then made of some of the pamphlets issued by the learned shaiikhs of Al Azhar. These theorists differed widely. Some, such as Abd al-Baqi Surur Nu'aim, were frankly reactionary. This writer believed that the commentators on the Quran were responsible for the distraction and consequent decay of Islam, and urged that if only Muslims would follow the Quran, the unity and might which would result would enable them once more to conquer kingdoms and subdue nations. This idea was not easy to distinguish from Pan-Islamism—a conception the prospects of which to-day were very black, since the Ottoman Empire had broken up. As a matter of fact, however, the thesis that division of opinion based on study of the Quran was responsible for the decay of the system was quite untenable: the break-up of the Islamic Empire was due to the difficulty of organising such a congeries of countries and nations, when communication was so slow and difficult.

Another school of Muslim thought sought to prove that whatever was good in European civilisation had been borrowed from Islam—to Islam was due the abolition of slavery, religious toleration, the improvement of women's status, the substitution of democracy for autocracy, and so on. One of the lecturer's Syrian correspondents added to these reforms two which he found that America had borrowed from Islam: prohibition and facility of divorce. "In these two matters," said Professor Margoliouth, "Islam may certainly claim priority; but it might be difficult to show that the people of the United States had adopted them after contemplation of their beneficial effects on the Islamic peoples."

Summing up the effect of the introduction of the Islamic peoples of large sections of Asia and Africa to European literature, science, and art, the lecturer said that there were those Muslims who would have nothing to do with it, those who frankly acknowledged its superiority to their own inheritance, and those who discovered that they had it all before the conquerors and were therefore under no obligation to those who had introduced it.

In conclusion, Professor Margoliouth explained the distinction between the ideas and the ideals of Islam, and said:—"The ideal which the most thoughtful (Muslims) appear to cherish is that of embodying in Islam the moral and social reforms which centuries of experience, not always progressive, but mainly so, have taught the European nations. It does not seem to me to be the function of religion to discover ethics, but to sanctify them when discovered by experience, observation, and reasoning; hence it comes that the same religious system has at different periods sanctified and condemned the same procedure. If, then, the ideal of modern Islam be so to utilize the reverence which thirteen centuries have accumulated for their religious institutions in the minds of the Muslim people for the sanctification of the advanced ethics which are the discovery of the European people, it would seem that members of other religious communities can only wish them God-speed in the attainment of that ideal."

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Exchange Crisis.

The events of the past week have borne out my suggestion that the adverse movement of the Turkish exchange might be expected to continue. The situation has naturally alarmed the Ankara authorities, who are endeavouring to cope with it by a variety of emergency measures, such as the curtailment of foreign purchases and the prohibition of dealings in foreign currency except under authorisation. The immediate result of these measures has been a marked improvement in the exchange, but how far this is likely to be permanent must be a matter of doubt, for the exchange weakness is a reflection of the exceedingly unfavourable economic position of the country. There is a large adverse trade balance, which has been increased by the need for importing foodstuffs to make good the shortage of the last two harvests, and the demand for foreign currency to pay for imports has just been increased by the beginning of the payments under the Debt agreement. Turkey is not in the happy position of other countries of having large secret imports, such as an important tourist traffic, remittances from emigrants, and interest on loans, to redress an adverse balance, and as the Ankara authorities have steadfastly set their faces against foreign assistance in the shape of loans, there is nothing to give real support to the exchange. As matters have gone, the present development was inevitable, but it could have been avoided if a different policy had been pursued in the past few years. It looks now as if, *faute de mieux*, the Ankara authorities may have to look for foreign help in their efforts to stabilise the exchange.

Turkey's Resources.

While the solution of the existing economic crisis is likely to tax the ingenuity of the Ankara authorities, it must be emphasised that the real sources of Turkey are of such a character that the ultimate future of the country is not in doubt, granted, of course, the pursuance of a prudent policy on the part of the authorities. Much has been heard in recent years of the crisis at Istanbul (to give Constantinople its real name)—a crisis which is now said to be worse than at any time since the War—but that is merely a reflection of the general trade depression and in particular of the fact that Istanbul is no longer a junction for the exchange of commodities between East and West. The real strength of Turkey rests in the land, and it is the development of agriculture by irrigation and by the introduction on a large scale of modern machinery that will set Turkey on her feet again. The crops of the country are many and good, and in favourable years many of them figure importantly in the export trade. One need only instance tobacco, sultanas, figs, nuts, mohair, olives, and cotton to illustrate the field covered by agriculture. When development has really taken place Turkey will be in a position to export very large quantities of produce, and her favourable geographical situation should enable her to find the necessary markets, if the export trade is properly organised.

Problems for Turkey.

The development of agricultural production is, however, a thing of the future, and is handicapped at the moment by the factor which is the root cause of Turkey's troubles—the lack of money. The Government has shown itself

unwilling so far to accept foreign assistance, and even if it were to modify its attitude in this respect it would probably not be easy at present to enlist the assistance of foreign finance on favourable terms. The problem is one, however, which must be solved before Turkey can hope to progress. The same difficulty of the lack of capital handicaps developments on the industrial side, but this is not the only problem encountered in this direction. Industries cannot be started, so to speak, in a day in a State which is not accustomed to industrialism, and Turkey lacks both skilled labour and skilled leadership for industrial ventures. Here again it is difficult to see how she can fail to take advantage of foreign aid by enlisting the services of expert foreign workmen and by permitting foreign concerns to assist in the country's development. In the course of time Turkey will no doubt be able to stand on her own feet when the yield of her land has enriched her people and experience of industry has brought the requisite knowledge, but in the meantime it would be foolish not to take advantage of the experience of other countries and of any assistance they may be willing to afford.

An Excellent Departure.

The election last week by the directors of the Baltic Mercantile and Shipping Exchange of Mr. K. M. Banthyaia, of the East India Produce Company, and Mr. R. J. Udani, of Bakubhai and Ambalal, as members of the Exchange, is a departure which is to be heartily welcomed. The fact that while foreigners were eligible for election to the sale rooms and other commercial organisations in the City the same facilities were not in fact available for all members of the British Empire was not unnaturally regarded as a legitimate grievance by the members of the Indian mercantile community in London, who learnt of the election of two of their members with great satisfaction. It may be recalled here that at the annual dinner last spring of the London Chamber of Commerce, Sir Stephen Demetriadi, Chairman of the Council, referred to this question and said:—"In my considered opinion, trade organisations, mercantile exchanges, and sale rooms—and I speak more particularly of those concerned with the sale of Indian products—should show their willingness to admit to their membership His Majesty's Indian subjects, and so remove any feeling that might exist of inequality of treatment." The development which has now taken place will, it may

be hoped, be followed by other organisations, thus cementing the trade associations between London and the largest market of this country.

Competition in the Near East.

One of the most regrettable features of the post-War era has been the undoubted decline in British enterprise in some of the leading centres of the Near and Middle East. In the pre-War period it was possible to point to British firms in each important city who for generations had played the leading part in the local trade, but the position is no longer unchallenged. Conditions in the region in question in the last few years have been very unfavourable, it is true, but it is futile to impute all the blame for the decline of British trade influence to adverse circumstances, for while some of our firms have been deploring the decreased outlets for enterprise, foreign firms have been freely entering the field, and they would scarcely be doing this merely to lose their money. To judge by all appearances, some of them seem to be doing very well in such an unfavourable field for British enterprise, and it makes one wonder whether the real explanation for our lack of success is not that British firms are no longer capable of withstanding serious competition. Before the War British firms in certain lines were largely immune from opposition, but the search for possible openings for enterprise to-day has ended that state for ever. Trade can now only be obtained and held by the most vigorous and up-to-date measures, and if our firms are to regain the position they have held it can only be by recapturing the spirit of endeavour which seems to have been lost through the lack of competition. If French, Italian, and German firms can find openings for business in the Near East, it is surely not beyond the capacity of our traders to do likewise.

Sale of Cyprus Products.

A very interesting report has just been issued by the Trade Commissioner for Cyprus in London for the six months ended September 30 last, detailing the steps which have been taken to promote the sale of Cyprus products in the United Kingdom. During this period Cyprus took part in three exhibitions, the principal one being the North-East Coast Exhibition, where the Cyprus Pavilion occasioned considerable interest. A large part of the report is devoted to market reports and investigations, some of which are encouraging. Thus it is stated that it is clear that there is scope for a considerable development in the export of onions to the United Kingdom, which may serve to counterbalance the decline in the exports to Egypt. A report received on a sample of Cyprus prunes was on the whole encouraging, and, it is pointed out, justifies further experiment. Then efforts have been made to increase the sale of Cyprus cigarettes, but while some success has attended them, it is remarked that most of the retail houses already carry so many different varieties that they are disinclined to add to their number in default of definite proof of a demand. Plans are now in train for the appointment of an agent in Great Britain, who would

conduct negotiations with retailers and would also conduct an advertising campaign. To judge from the report there should in time to come be a large and increasing market for Cyprus products in the United Kingdom, but this will depend on the attention paid in the Island to the requirements in this country. Reference is also made to the tourist traffic, and it is stated that no special effort is being made to increase it at the present time, but that that can be done when the time is opportune. It is interesting to note the remark that while most of the visitors with whom the Cyprus office has been in contact appeared to have enjoyed their visit, some complained that Cyprus is less attractive than it was made to appear. The truth is, no doubt, that Egypt and the Riviera have spoiled visitors for other regions.

COMMENTATOR.

REDUCTION OF TAXATION IN GREECE.

The following details of developments in Greece are given in the report of Hambros Bank, Ltd., for the week ended December 6:—

It is reported that the Government has decided to introduce measures for the reduction of taxation with a view to alleviating the burden which bears heavily on the population generally, and more particularly on industry and agriculture, by:—(1) Abolition of the temporary tax on agricultural produce. This measure is indicated as a necessity for agriculture which is passing through a difficult time. (2) Reduction by 20 per cent. of tax on pigs, goats, and sheep. (3) Reduction by 25 per cent. of tax on olive oil. (4) Reduction by 20 per cent. of tax on land and building values. (5) Reduction by 20 per cent. of stamp duties on collection of interest. (6) Reduction by 20 per cent. of tax on theatres, cinemas, etc. (7) Reduction by 20 per cent. of tax on trade licence. (8) The contemplated reduction of 20 per cent. of the tax on tobacco will not be put into effect until next year, seeing that such reduction would not benefit the grower. In lieu of this the Government decided to make a grant of 40,000,000 drs. for the erection of depôts for the tobacco growers, and an additional grant of 10,000,000 drs. for the formation of a Tobacco Institute, which will help to improve the production and quality of the product. The tax deductions as above are reckoned to represent 240/250,000,000 drs., out of which 150,000,000 drs. will benefit agricultural products, and will, undoubtedly, reflect favourably on the economic life of the country.

Stamp collections during September reached 27,741,308.90 drs., against 24,712,279.40 drs. collected in September, 1928.

Tobacco.—Preliminary estimates based on information received from tobacco areas give production as follows (in okes):—Thrace, 5,800,000; Eastern Macedonia, 22,500,000; Central and Western Macedonia, 15,500,000; Thessaly, 4,500,000; Western Greece and Epirus, 6,900,000; The Island and Attica and Peloponnesus, 7,300,000; total, 62,500,000. This is a record production, exceeding by 50 per cent. the average production for the quinquennial period of 1924-1928. The demand for tobacco this year is rather slack. Buyers are reserved, as happens in all cases of commodities at present. There has been, however, an exception as regards sales of tobacco of the Islands, a constant demand for the quality grown there having been maintained, especially from American buyers, who have shown particular interest in this product. It is understood that representatives of the Swedish Monopoly were making purchases of tobacco of the 1928 crop.

Special attention is paid to the manufacture of silk goods, the local progress having resulted in a substantial decrease of foreign imported fabrics. For the year 1927 there were imported in Greece 78,020 kilos., of a gross value of 94,358,000 drs. For the year 1928, imports reached 52,200 kilos., of a gross value of 61,750,000 drs. Most of the fabrics imported during 1928 were of the "printed type," a branch to which the Greek industrials had not time to pay proper attention. Since then some progress has been made in that direction.

THE PERSIAN MARKET FOR MUSICAL INSTRUMENTS.

Native Persian music, being essentially Oriental and unadapted, does not invite the use of imported instruments (says the United States Consul at Teheran, Mr. A. W. Ferrin, in a recent report). Oral music is a weird falsetto with half tones, something like Andalusian, and is not generally acceptable to European ears. Music-making mechanisms are drums, horns, flutes, a species of fiddle, and the "tar," a kind of single-barrelled instrument between the guitar and mandolin, all manufactured locally. Nevertheless, in the fiscal year 1927-28 50 pianos, 5 organs, and 900 batmans (5,680 lb.) of "other instruments" were imported. The pianos were principally for the use of foreign residents, but native Persians are beginning to learn to play them as well as other instruments of all kinds.

The rather numerous military bands use foreign instruments exclusively, probably accounting for the bulk of the "other instruments," and by giving frequent free concerts in parks and squares are accustoming the public to Western ways of making melody. An ex-gendarmery officer, who has studied abroad, has organised an orchestra for producing Persian music harmonised and partially Europeanised by him, which has acquired some vogue. He has also adapted some Persian military music for the use of brass bands. In his orchestra he uses a piano and European violins and flutes with native "tars," he himself being the star "tar" player of Persia. This music lover also founded a musical school, which is now operated by the Ministry of Education. Several jazz bands of Caucasians or Russians play European and American dance music in Teheran cafés; Tabriz also has one such band and there may be others in Pahlavi and Ispahan.

The value of the 50 pianos imported in 1927-28 was 12,000 toman, practically the same in dollars, and the sources were Germany 33, Great Britain 3, France 1, Czechoslovakia 1, and China 1. Five organs valued at £23 came from Great Britain, and one valued at £33 from the United States. It is understood that the organs were for use in mission chapels. The sources and values of "other instruments" were: France £986, India £193, Great Britain £159, Germany £117, Russia £64, Iraq £39, and Italy £18.

The most popular foreign instrument, however, is the phonograph, which can produce Persian as well as foreign airs. A British-American gramophone company last year sent experts to Persia, who made some 500 records of Persian music, with a resultant increased sale of discs in Persia. Nearly all the teahouses in Teheran and other cities, also along inter-urban roads, have phonographs for the amusement of their guests. Soldiers seem especially fond of these machines, and many are found in military barracks.

Phonographs are classified separately and not as musical instruments. The customs figures include discs with

machines, and give the total for 1927-28 as 19,665 batmans (12,780 lb.), valued at £23,871, divided as follows:—Great Britain £19,594, Germany £2,184, France £1,400, United States £182, Belgium £124, Switzerland £61, other countries £326.

While, as already indicated, Western music and consequently Western instruments, particularly phonographs, are not unwelcome in Persia, the immediate market is restricted by adverse exchange and transport conditions and by a local financial crisis, which has reduced the general purchasing power to an unusually low level. These conditions may prove temporary and orders may increase when normality has been restored, although the demand for many years will be limited.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.S. Tarantia for Bombay (Glasgow, December 17; Manchester, December 24; Birkenhead, December 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.S. Makalla for Calcutta (Glasgow, December 15; Birkenhead, December 22).

Bibby Line.—S.S. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 27).

British India Line.—S.S. Masula for Bombay (London, December 14); S.S. Margha for Colombo, Madras, and Calcutta (London, December 14).

Cunard Line.—S.S. Bothnia for Casablanca, Gibraltar, Malta, Corfu, Patras, Piræus, Salonika, Smyrna, Istanbul, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow and Swansea, December 13; Liverpool, December 14); S.S. Bantia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21).

Johnston Line.—S.S. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 21); S.S. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 25).

P. and O. Line.—S.S. Burdwan for Calcutta (London, December 20); S.S. Ranchi for Bombay (London, December 20).

Prince Line.—S.S. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, December 14); S.S. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 21).

Ellerman and Papayanni Lines.—S.S. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, December 27; Glasgow, December 30); S.S. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 28; Swansea, January 2); S.S. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 28); A steamer for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 28; Swansea*, December 28); S.S. Mardinian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 11; Swansea*, January 11). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

For the first ten months of the current year the gross revenue returns of the Manchester Ship Canal Company amounted to £1,190,681, against £1,170,402 for the corresponding period of 1926.

A Cairo message states that the Administration Department of the Egyptian Railways has received nine tenders for the supply and erection of the Ed Fina Bridge in Lower Egypt. The lowest tender was received from the Société Antonio Bardone, approximately £E115,000, and the highest from the Motherwell Bridge Company (£E281,000). The Cleveland Engineering Company sent in a tender of £E119,000, Dorman Long and Co. one of £E122,000, and Krupp one of £E134,500.

The Administrative Council of the Suez Canal Company in Paris has fixed the dividends for the period ending January 1, 1928 after the payment of tax, as follows:—On capital shares: Bearer bonds, 152 francs 36 centimes; registered shares, 813 francs 36 centimes. On bonus shares: Bearer bonds, 149 francs 33 centimes; registered shares, 177 francs 60 centimes. On founders' shares: Bearer bonds, 177 francs 36 centimes; registered shares, 202 francs 48 centimes.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 10.

Business on the Stock Exchange has remained on a restricted scale, but the general tone has shown a considerable improvement, and there has been no renewal of the heavy liquidation which has characterised recent weeks. New York, indeed, has provided a little support. Anticipations of a reduction in Bank Rate, which became stronger on Wednesday afternoon, were disappointed, but the decision had no adverse effect on prices, the gilt-edged market benefiting from the re-investment of the large disbursement of War Loan interest at the beginning of the week. The traffic plans for London, announced by the Minister of Transport, to which reference is made below, disturbed Underground stocks, but Home Rails remained steady. There was some evidence of a revival in international shares, but home Industrials were rather quiet.

London Traffic.

The announcement made in the House of Commons by Mr. Herbert Morrison, the Minister of Transport, regarding the Government's plan for co-ordinating London's traffic, has created considerable comment. No details are yet forthcoming, but the public and the interests concerned have been forewarned of the line the Government intends to take. The proposal is to combine public ownership and business efficiency in a body as free from political control as possible. The body, moreover, is to be financially self-supporting and free to raise its own capital in the money market. It is quite obvious that the first step in this direction is to give all existing shareholders of private companies a fair exchange of stock in the new unified corporation. Bodies such as it is proposed to set up already exist in the Port of London Authority and the Central Electricity Board, whose stocks have practically a gilt-edged status. The proposed London Traffic Corporation will no doubt absorb the Underground Electric Railway, which has ordinary shares yielding about £6 7s. per cent. and 5 per cent. debentures yielding about £5 5s. per cent., London General Omnibus whose 4½ debentures yield £4 19s. per cent., and London United Trams, whose 4 per cent. debentures give a return of £7 15s.

per cent., will also presumably be included. By way of comparison it may be pointed out that the Port of London Authority 6 per cent. yields £6 per cent., and the Central Electricity Board 4 per cent. stock gives a return of £5 per cent.

Tobaccos.

The Black Cat is undoubtedly a very appropriate sign for Carreras, the tobacco manufacturers, whose annual accounts are almost invariably an improvement on the last. In the year ended, October 31, for which the accounts have recently been published, this firm made a net profit of £1,285,154 practically £131,000 more than last year. With the amount brought forward, £2,505,043 was available for distribution. A final dividend of 35 per cent. gave the A and B. ordinary shareholders 50 per cent. again for the year on a capital increased by a bonus distribution last year. An additional bonus was again distributed this year, absorbing £351,563 in the form of one "A" ordinary share for every four "A" ordinary shares held, and one "A" ordinary share for every 32 "B" ordinary shares held by shareholders at the end of this year. The "A" ordinary shares are of £1 each. A new development fund receives £100,000. After all deductions £1,059,165 is carried forward. Some idea of the progress which the firm has made is realised from the fact that profits in 1923 amounted to £181,963 and this year they amount to £1,285,154. While from the income point of view the yield on the various ordinary shares is not very high, in such a firm as this they certainly have the attraction of favourable prospects of capital appreciation.

Film Finance.

During the Stock Exchange boom period many companies were floated whose shares rose to dizzy heights, but which have now fallen no less spectacularly. Most of these new issues were concerned with young industries and new inventions and most of the shares were of small denomination, of five shillings or one shilling, thus attracting even comparatively poor people to take up such shares. Particularly conspicuous among these flotations were a number of film companies. Largely encouraged by the Films Act of 1927, imposing upon distributors a certain quota of British films, many people believed that British films had only to be made in order to be profitably sold. In point of fact the existing British companies could have supplied all the films required by the quota and more. But a lot of other companies obtaining their money from a misinformed public, sprang into existence. The result has been disastrous. Glamorous prospectuses have been followed by disappointing annual reports, and shares which, as calculated by the *Economist*, in total reached a value of over £2,300,000 are now worth barely £613,000. Film production is at best a highly speculative business and at the same time one needing immense resources of capital. Investors at all attracted by this class of investments should confine their attention exclusively to the three or four big companies, and realise even then that they are making a gamble.

Major A. H. St. G. Hamersley, M.C., has accepted the Egyptian Government's offer of a ten years' contract in the Egyptian Army. He left Cairo in the middle of last month with Mrs. Hamersley for Alexandria, where he is taking up his new duties.

The production of crude oil in Roumania amounted to 435,959 metric tons in October, as compared with 418,314 metric tons in the previous month. The output of the principal producing districts in October was as follows:—Prahova, 318,108 metric tons; Dambovitza, 103,626; Buzau, 6,866; Bacau, 7,359.

The Board of Directors of Barclays Bank (Dominion, Colonial and Overseas) recommend a final dividend for the year ended September 30, 1929, at the rate of 8 per cent. per annum on the cumulative preference shares, less income tax at the rate of 2s. 7d. in the £, and a final dividend on the "A" and "B" shares at the rate of 5 per cent. per annum, less income tax at the rate of 2s. 8.7d. in the £, making, with the interim dividend paid in July last, 44 per cent. for the year.

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Power of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Motors and Motoring.

(By Our Motoring Correspondent)

The Transport Bill.

The opposition to the suggested Transport Bill, so far as the removal of speed limits and the compulsory insurance of motorists are concerned, is steadily increasing, and even that section of the community who usually seem to think that any proposed alteration of existing conditions necessarily means progress and improvement are not nearly so much in favour of them as they were a week or so ago. The cartoonist's ambulance driver, who, after the speed limits have gone, will be able to "handle more victims" because he will be able to travel at higher speeds, has some sort of a twisted reflection in the minds of most road users who know, from long experience of the road, that there are certain drivers who will take liberty for licence. There is, as every motorist knows, a type of driver on the road who has by far too much ego in his cosmos; he behaves vulgarly in hotels, blusters his way through all the conventions of the road, and bullies other drivers. It is that sort of thing that has done so much harm, that is likely to do so much more harm and which leads thinking motorists to hope, almost against hope, that the authorities will put motor-cycle police patrols on the road on purpose to hold these gentry in check.

As for the compulsory insurance, the chief objection that is being urged against it at the moment, although I do not consider it to be by any means the most weighty, is that it will in effect set up another licensing body. The fear is that a motorist may be involved two or three times in accidents until at length the insurance companies will refuse to take his risk, except perhaps at an exorbitant premium. Some go so far as to suggest that the whole matter of motor insurance should be taken over by the Government—as if the Government hadn't quite enough to do as it is—so that anyone who wanted to drive could get insured. These people, together with those who feel that insurance companies should not be allowed to refuse to insure any and every applicant, seem to forget that in practice the insurance business is in the nature of a co-operative concern, and that all sums paid out, plus all administrative and other expenses, have first to be obtained from premiums, and that if the outgoings are to be high, the incomings will have to be high also. Rather than urging that insurance companies should not have a power of refusing an applicant, it would be better were motorists generally to urge that no man convicted of certain offences should be granted insurance cover by a company.

It should be fairly obvious that with road accidents at their present level and the rate of increase of those accidents steadily maintained and even accelerated, insurance premiums are going to be very high indeed, if compulsory insurance ever comes along. We have, therefore, the per-

fectly legitimate complaint of the careful motorist that he is to be asked to pay more money simply because some other people are less careful drivers than he is himself.

The further risk, and one that it seems almost impossible to overestimate, is that of bogus claims for damages. That will mean a big increase in staffs, claims inspectors, and other officials which, coupled with the high risk, will make premiums extremely high in comparison to general taxation and licences. No young or fairly impecunious motorist will be able to face his driver's licence and his horsepower tax when they are increased—probably doubled and trebled—by an insurance premium. The trade in second-hand cars will be hit severely and the hire-purchase trade will also be affected adversely.

It is certain that there are arguments, more sentimental than sound, in favour of compulsory insurance. We have heard of bread-winners, run down by careless or thoughtless motorists who, uninsured, have been able to pay nothing in the way of damages to the bereaved families. Whether such cases are as frequent as are made out, is a moot point. Let us assume that they are. In such cases, so far as monetary payment is concerned, compulsory insurance would be of benefit—at first. But no thinking person will be prepared to argue that insurance will reduce in any way the number or seriousness of road accidents. Indeed, it is easy to see that road accidents, under any form of compulsory insurance, are going to increase very considerably. We are going to have, not only more accidents but more serious accidents, when compulsory insurance is reinforced by an abolition of the speed limits. The number of "breadwinners cut off in their prime" will increase accordingly, and all that will happen is that the victims of the erring minority will have to be paid for out of the pockets of careful drivers. It is curious that the advocates of compulsory insurance fail to see that the real remedy is to get the careless, reckless driver off the roads; not to pay his expenses for him!

Speed Limits.

It is by no means certain, it may be added, that the speed limits will be abolished. It is true that the speed limits have been ignored, but there is no doubt that they have a deterrent effect. A good deal of Ministerial opinion is to the effect that speed limits should not be abolished, but should be revived and graded and then steadily enforced. My information is that the absolute maximum suggested by the Ministers concerned is 40 miles per hour, with certain reductions according to local conditions. There is an argument, perhaps one of little weight, against this idea, and that is that most of us have an idea that what the law allows as a maximum is what the law considers safe, and that were 40 m.p.h. fixed as a maximum, we should all drive at 40 m.p.h. and let the consequences take care of themselves. But after all that is a weak argument; as we have seen, we have a speed limit to-day of 20 m.p.h., but no motorist ever had an accident when he was going above that speed; all

accidents occur when the motorist is travelling at from four to, at most, twelve miles per hour and sounding his horn and doing his best to prevent pedestrians from walking into him!

An Overtyping Van Chassis.

The specification of the new model J.O. 60-65 cwt. overtyping van chassis just sent me by Garner Motors, Tyseley, Birmingham, is of interest in that certain new engineering features are incorporated. The four-cylinder engine is of 100 by 140 m.m. bore and stroke, developing 50 b.h.p. at 1,800 r.p.m. There is a single plate clutch, with four-speed gearbox, two-piece propeller shaft, overhead worm-driven axle, 17 by 3 inch side by side brakes, substantial frame side members, underslung rear springs, full forward driving position with Garner patented accessibility, 34 inch by 7 inch Dunlop Fort reinforced pneumatic tyres, twin rear, spare wheel and tyre, valanced front wings and steps, tyre carrier, speedometer, mechanical tyre pump, 12-volt five lamp lighting set, 25-gallon tank with Autovac feed, 14 ft. 3 in. wheel base with 2 ft. 3 in. frame line, loaded, and a 5 ft. track. The chassis can be fitted with tilt van body with pay load measurements of 17 ft. by 7 ft. by 8 ft. high with additional loading space over the driver's cab. Total capacity, 1,006 cubic feet. Driver has a sloping and adjustable windscreen to his cab, and there are landaulette doors and seating for three persons. Altogether, this seems a useful little proposition, and readers interested would be well advised to send for further particulars.

A Useful Diesel.

A useful size of Diesel engine of the four-cycle, four-cylinder type is now obtainable with an output of 38 horse power at 1,000 revs. per minute. As the gross weight is only 12½ cwt., the power weight ratio is the very fair figure of 36.8 lb. per h.p. I understand that there is no weight reducing alloy used in this engine, but every part is thoroughly sound, reliable metal. The reason I am mentioning this engine in particular is because there is arising a demand, which will, I am certain, shortly become a strong demand, for Diesel engines for omnibus and motor coach work, and this engine strikes me as being just the thing for the work, particularly if the weight can be reduced, for omnibus work, without reducing the strength. This could probably be done by cutting out a large amount of the metal at present allowed for the base plate, etc. The engine has the following over-all dimensions; length, 44 inches; width, 25 inches; height over-all, 29 inches. The engine is operated by overhead valves worked by enclosed push-rods and rockers which are pressure-lubricated, the oil circulating system being positive and pump operated. To start the engine three of the cylinders are cut out by means of a small lever operated by the driver so that only the compression of one cylinder has to be overcome by swinging the handle. The cutting-out is effected by a longitudinal movement of the inlet valve rockers, whereby the valves are first held fully open, then at half compression as soon as the first cylinder has fired, and then, when all the cylinders come into action, the cam moves all the valves back into the normal running position. Three of the fuel injection pumps are also cut out of action for starting and the engine speed can be set at a constant for level running with a given load and at a predetermined speed by means of a governor acting directly on the fuel supply, and which can be altered to suit varying loads by a foot pedal in the style of the ordinary accelerator pedal.

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Indian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

CLOTHING AND TEXTILES AT THE BRITISH INDUSTRIES FAIR.

The leading firms in several branches of the clothing and textile industries are among the thousand manufacturers who have taken space in the London section of the British Industries Fair, which will be held at the new and enlarged Olympia from February 17 to 28 next. Chief among them will be the Irish and Scottish linen manufacturers. Their representatives recently visited the United States in order to learn more about the market there, and some American and other overseas requirements will be met by the goods displayed at the Fair. Five Dunfermline firms are exhibiting, and four of the most important firms from the North of Ireland and the area of their stands will amount to a small exhibition in itself—2,500 square feet.

Men's hats are another branch of the industry in which the leading firms will be found among the exhibitors in the coming Fair. They include firms (Lincoln Bennett, Battersby, and Christy) who may be trusted to show once again that Britain—not forgetting Stockport—cannot be beaten in any part of the world for what is known as "quality headgear" for men.

Among things which will surely attract the eye of visitors from abroad will be the display of livery and uniform specialists (Hazel and Co.), and the stand of a very regular Scottish exhibitor at the Fair (P. and J. Haggart), who shows tweeds and tartans as supplied to most members of the British Royal Family. There will also be a Stornoway firm's exhibit (Newall) including a rug exhibited for the first time which is made from yarns spun on the islands of Harris and Lewis and dyed from vegetable dyes collected by the crofters and giving to the rug the distinct and pleasant aroma associated only with the real Harris tweed.

A Gloucestershire carpet, mat and rug manufacturer (John B. Champion) will show among other things prayer mats which actually find a market in Mecca, and Worcestershire will be represented by a well-known down quilt manufacturer (R. J. Collins). Coloured nets for window decoration (the manufacturers avoid the word "curtain") in cotton and rayon of various colours will be shown by a West of Scotland firm (Stirling Auld, Ayr) and it is stated that there is a considerable demand for certain classes of this material from Australasia.

CYPRUS CROPS.

The report on Cyprus crops for November states:—

The cultivation of fallows is proceeding, but dry weather has delayed the sowing of wheat. There is a good stock in hand, but prices tend to decline and the demand is poor. The price is 5s. to 6s. per bushel.

Sowing of barley continues in spite of the dry weather. Offers are good but the demand is poor. The price is 2s. to 2s. 6d. per bushel.

The new crop of potatoes is now on the market, and small shipments have been made to Egypt and Greece. The prices are £5 to £5 10s. per ton.

Picking of cotton is almost finished. Offers are good but the demand is poor.

The hopes predicted for a good orange year are materialising. The condition of the crop generally is good. Export of early maturing varieties has begun at prices between 30s. and 35s. per 1,000. The dealers expect greater activity in the orange trade with the United Kingdom and Central European countries.

The export of mandarines to Egypt is good. The price is 7s. to 8s. per 1,000.

Large quantities of sweet limes have been sold to Palestine, where they are in demand for seed for raising stock plants.

Large quantities of lemons are being shipped to London. Lemons are reaching United Kingdom ports in a very healthy condition, and the prospects of an increased trade to the United Kingdom are better.

Gathering of olives and olive oil extraction are in full progress. Damage by olive fly is reported from certain areas in the Famagusta district.

DEVELOPMENT OF PERSIAN PORTS.

The new port of Bandar Shapur, formerly called Khor Musa, is likely to supersede Bushire as the principal Persian port on the Gulf when and if the projected railway from the Gulf to Teheran is completed (says the United States Consul at Teheran, Mr. A. W. Ferrin, in a recent report). The main Gulf ports in Persian territory at present are Bushire, Muhammarah, Bundar Abbas, Lingah, and Jask for general cargo and Abadan for oil. Considerable cargo also is landed at Basrah, Iraq, crossing the Persian frontier at Kasr-i-Shirin (Customs station Kermanshah).

In the fiscal year ended March 20, 1928, the latest period for which statistics are obtainable, ships calling at Bushire numbered 397, of which 303 were British steamers of 1,175,000 net tonnage, and 65 were small Persian sailing boats. More vessels cleared through Muhammarah, but the tonnage was hardly half as much as at Bushire. The total clearances at Muhammarah were 1,021, of which 789 were small Iraq sailboats and motor boats. Steamers were 71 British, of 202,000 net tonnage, 7 German, 4 French, 2 Dutch, and 2 Norwegian. Calls at Bundar Abbas numbered 911, of which 668 were little Persian sailboats and 141 were British steamers of 290,000 net tonnage. Six German and three Norwegian steamers also visited Bundar Abbas. Steamers entering Lingah were 83 British of 188,000 net tons, and 1 German; 591 Persian and Arab sailboats, many of them pearl fishers, entered and left Lingah during the year. Fifty-six British steamers of 106,000 net tons cleared at Jask. At Abadan 555 British steamers called and loaded 3,570,200 tons of oil from the Anglo-Persian Company's plant; also, 52 steamers of other nationalities taking away 497,000 tons of oil. The total cargo landed at all Persian ports on the Gulf was 169,967 tons, and cargo taken aboard, including oil, was 4,026,845 tons.

All the present ports are shallow, and, with the exception of Abadan and Muhammarah, are exposed to bad weather. Consequently, Bandar Shapur, which is protectable against the weather conditions, has been chosen as southern terminus of the projected railway system. It was planned originally to base the railway upon Muhammarah, but that port was rejected. It is advantageously situated at the mouth of the Karun River, which is navigable by boats of 3-foot draught as far as Ahwaz and above the Ahwaz barrier to Shushtar, but foreign engineers found Khor Musa better adapted to the railway scheme.

The Khor Musa inlet is a large, deep waterway extending in a northerly direction from near the head of the Persian Gulf. At its mouth it is crossed by a short bar, having a mean water depth of 5.7 metres. Beyond this the channel deepens to from 11 to 50 metres and carries by 10 courses with easy angles about 45 kilometres to a group of islands on the north and west side of the channel, where the new port of Bandar Shapur will be placed. The inlet however, continues as a wide, deep navigable stream for several kilometres beyond the port site. At the port the extreme range of tides is about 6.20 metres.

The American group in the German-American railway syndicate has constructed a timber dock 400 metres long, including approaches, for handling of materials required for railway construction. The timber used in the structure was purchased in the United States and was transported directly to the site on the steamship Arabistan, the first seagoing ship to enter Khor Musa inlet, in December, 1928. The first ocean steamer was brought directly alongside the dock in March, 1929. Since then several ships have entered the port, proving that its natural features are favourable to the proposed development. The railway syndicate has contracted to prepare plans for the permanent development of the port.

Work on New Railway.

The railway, which begins at Bandar Shapur, will cross the Karun River at Ahwaz, where piers of a bridge a mile long and part of the steel work already have been placed. Grading has been done to Dizful, 251 kilometres from the

port, and about 100 kilometres of rails have been laid. Trains should be running into Dizful late this year or early next year. The project calls for the eventual extension of the line through the Luristan Mountains to meet the German section coming down from the Caspian Sea, making a cross-country line of about 1,500 kilometres through Teheran, and probably through Hamadan, though that part of the route seems not yet to have been definitely decided upon.

Contracts for the central section, about 1,000 kilometres, remain to be let, on estimates which will be submitted by the syndicate in November of this year. Construction work through the Luristan Mountains from Dizful to Khurramabad will be very costly, and even if begun soon will require at least six years. In the meantime it is planned to run freight trains from Bandar Shapur to Dizful and transfer their contents there to motor trucks plying over a new highway through Burujird and Sultanabad to Hamadan and Teheran. It is believed that in this way both time and cost of delivering goods inland will be materially reduced, as well as dependence on the not infrequently interrupted Bushire-Shiraz road. This combination rail and motor route also will lessen reliance on the Muhammarah-Ahwaz route, which lies in heavy sand and is subject at certain seasons to serious inundations.

Persian ports on the Caspian Sea are open only to traffic through Russia. The principal ports are Pahlavi, Meshedsar, Astara, and the new port, Bandar Shah (Bandar Gaz), northern terminus of the Trans-Persian Railway. Pahlavi, port of Resht, capital of Gilan Province, has direct passenger and freight relations, by regular steamer, with Baku, Russia. The harbour is protected and fairly deep, though large ships must land cargoes by lighter. A dredge has been purchased in Europe this summer especially for Pahlavi, and it is intended to dig a deep channel to the pier which now can be reached at times by small boats. Clearances at Pahlavi in 1927-28 were 316 steamers and 236 sailing vessels. Merchandise landed amounted to 67,466 tons and embarked to 57,793 tons. German, Italian, and other European goods reached Teheran by this route, over a well-made mountain road on which motor trucks can get to the capital via Kosvin in two days, against a week or more from the gulf.

From Meshedsar, the port of Mazanderan Province, 23,841 tons of merchandise, mostly raw cotton, was carried to Russia by 227 Russian steamers and 56 sloops. Goods landed there—largely sugar—amounted to 12,240 tons. The harbour is shallow and goods are landed in lighters to the Custom house wharf. A total of 83 steamers and 67 sailboats and 52 motor boats visited Astara, where the Russian and Persian west-Caspian frontiers meet, disembarking 8,992 tons of general merchandise and taking on 3,898 tons. Astara is an important fishing port, but Pahlavi is the centre of the Perso-Russian sturgeon and salmon fisheries.

Bandar Gaz, on the south side of Asterabad Bay, in the east Caspian, has been the port of eastern Mazanderan and the Turcoman-inhabited Persian Province of Asterabad since the time of Shah Abbas, who built thence a stone causeway, still in use, to his palace at Ashraf in the Elburz mountains. The German group in the railway syndicate has created at Bandar Gaz a wooden pier about 500 metres long with a Decauville track on it for the handling of railway materials, but plans to make the permanent port about 20 kilometres eastward. The name Bandar Shah is rather indiscriminately applied at present to both Bandar Gaz and the new harbour, where pier work and warehouses are partly completed.

JOHNSTON LINE Mediterranean, Black Sea and Danube. REGULAR SAILINGS from: Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila. For Rates of Freight, Insurance and other information apply to: JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester. and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool

Water at the end of the Bandar Gaz pier is only 5 feet deep and steamers have to lie out about a mile and discharge into Turcoman sloops, which unload at the dock. A dredge recently bought abroad will arrive soon and will attempt to make the pier at the new port approachable by big boats. As the south Caspian climate is tropical, it can work through the winter.

The number of vessels entering Asterabad Bay in 1927-28 was 74 steamers and 403 sloops, which landed 7,685 tons and took on 7,014 tons. Cargo disembarked consisted chiefly of cereals and hides from the Turcoman plain. All the cargo steamers on the Caspian are Russian. Of the 1,367 sailing ships, 369 were Russian and 998 Persian. Persians also operated 106 motor boats, some of them towing barges.

The northern section of the cross-country railway already has been provisionally opened from Bandar Gaz to Ashraf, about 60 kilometres, and rails have been laid to Sari, capital of Mabanderan, about 100 kilometres from the port. Grading to Aliabad, 36 kilometres further, has been completed, but beyond there the status of the northern scheme is the same as that of the southern above Dizful, i.e., contracts will not be let until after the submission in November of the syndicate's estimates. It is understood that a dispute has arisen as to the proposed route through the Elburz mountains and that a new survey may be ordered.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 4:—

Egyptian Futures.

Sakel Contract.—Very little business has transpired in this market during the past week, and only unimportant fluctuations have been witnessed. Present conditions are hardly conducive to speculative activities, and with the trade experiencing a very quiet period, possibilities of anything but very restricted price movement in the near future appear to be discounted. A sustained advance in the American markets would undoubtedly react favourably on the Egyptian situation at the present juncture, but, failing this, the effects of the Government's policy would appear to establish a maximum and minimum price for the time being. For Sakels to advance on their own merits a more widespread and consistent demand will have to develop; unfortunately, trade conditions, both in this country and on the Continent, show no indication of this, with the result that insufficient cotton is being taken off the market to relieve the present heavy statistical position. The second official crop estimate was received on Monday, the yield being 2,561,595 kantars, against the earlier figure of 2,502,992 kantars. This report had no effect on the market which, from now onwards, will be more closely concerned with consumption possibilities during the next few months. During the last two or three sessions reports from Alexandria indicate a somewhat firmer tendency prevailing in the contract market; at the same time, shippers continue to cable offers at attractive premiums, and we rather incline to the opinion that the basis has now worked down to the low point of the season. To-night's closing prices show the following differences on the week:—6 down to 5 points up for near, and 3 to 1 point up for distant positions.

Upper Contract.—Trading in this market has been confined to moderate trade purchases on the one hand, with import houses selling against purchases of actual on the other; speculative enterprise continues to be at a very low ebb. On the first tender day in December, 58,250 kantars were declared in Alexandria, bringing prices to within a point or two of the Government's buying figure. We understand the cotton has been taken by exporters, and since this, a slight recovery in values has taken place. The second official crop estimate practically confirms the initial figures, so that the main question now to be settled is, to what extent the offtake is going to be affected by recent events in the U.S.A. So far, the market has not received the usual support from the tyre concerns, and the demand in this country has hardly come up to expectations. There appears little in the outlook to lead one to anticipate any material change in the level for the time being, and, with this in view, we hesitate to advise commitments.

Egyptian Spot.

Conditions here have been singularly depressing during the past week, but no further easing in values has occurred. It must be borne in mind that a few weeks ago a buying movement of some importance was witnessed, and the cotton bought then is now in process of being consumed. Probably the majority of the mills have, under present conditions, sufficient cotton either at hand, or on the way, to fulfil orders well into January, and until the bulk of this cotton has been turned into yarn we are unlikely to see much improvement in the demand unless some unlooked-for "bull" feature crops up.

The demand is, in fact, at the moment about as dead as it could well be, and everyone seems to be waiting for some fresh feature to turn up which will again turn spinners' attention to the raw material. Possibly, the next American Bureau report will supply a much-needed fillip. At all events, that appears to be the only hope for the immediate future, for conditions in the yarn trade are anything but bright at the moment.

Sakels have been in quiet request only, and purchases have been confined for the most part to very small lots. A little has been done at about 50 to 100 on, and again at about 100 to 150 off contracts. The better grades have been neglected.

Uppers.—A fair inquiry for cotton at from 10 off to 10 on has been in evidence, but purchasing power has been much restricted. Some buyers have shown more interest in cotton at from 30 to 75 on, but results have been similar.

Pilion has been in limited request, chiefly at from 100 to 150 on January Upper.

Maarad, Nahda, Fouadi, etc.—These "fancy" growths have all suffered from neglect this week. Old crop Nahda is pressed for sale.

Sudan Sakel has been in moderate request only at firm rates.

Tokar Sakel.—Little, if any, interest has been shown. There are some attractive lots of this growth on offer which should prove bargains to the discriminating buyer.

Low cotton of all descriptions continues to figure frequently in the daily inquiry.

C.i.f. business.—Trading has been slow to mature and results have been generally disappointing. Forwardings to spinners last week were returned as 10,152 bales Egyptian and 1,777 bales Sudan.

Spot Sales.—These have been estimated at 1,300 bales Egyptian and 150 bales Sudan Sakel. Quotations of Sakel, Extra Fine and Fair, have been advanced 10 points. Uppers are quoted 11 points, and Pilion 7 points dearer on the week. F.G.F. Sakel to-day, 14.65d. F.G.F. Upper to-day, 10.69. F.G.F. Pilion to-day, 11.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report for the week ended November 28:—Since our last report the futures market has been rather inactive and the tone heavy. The week's summary of price movements is as follows:—Sakellaridis: January, 27.73 dollars, 0.42 dollars down; March, 28.25 dollars, 0.57 dollars down; May, 28.78 dollars, 0.52 dollars down; July, 20.02 dollars, 0.81 dollars down; November N.C., 20.63 dollars; 0.78 dollars down. Ashmouni: December, 19.13 dollars, 0.25 dollars down; February, 19.62 dollars, 0.26 dollars down; April, 19.08 dollars, 0.30 dollars down; June, 20.33 dollars, 0.31 dollars down; August, 20.63 dollars, 0.41 dollars down; October N.C., 20.83 dollars, 0.39 dollars down.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended November 23:—

Grain.—The improvement in grain prices which set in this week and which was mainly due to the rumour that the German Government intended to impose an import tax on barley as from January 1 next, had a corresponding effect on our market, with the result that fairly large parcels of this commodity for immediate shipment or already shipped unsold, have been sold at improved prices. For maize, however, last week's activity has been considerably reduced, the bulk of the arrivals of this commodity being bought in fulfilment of engagements in England. The local freight market showed a better tendency right from the very beginning of the week, and rates consequently rose to 14s. 6d. for Antwerp/Rotterdam, and 15s. to 15s. 3d. for German destinations. Tonnage continues to clear off and there is every probability of higher rates being paid by the end of the month, the more so as it is hardly likely that fresh tonnage will venture up-river next month. With regard to Sulina winter stocks, the quantity available at Sulina for the winter will not be unimportant. At Constantza the situation improved considerably in that the bulk of the tonnage which was pressing on the market there has gradually cleared off, and rates consequently stiffened, present rates being 9s. to 9s. 6d. for Continent.

Timber.—A weak tendency prevails except for North African ports and Sicily. A parcel of about 100 waggons has been closed for Casablanca at £15 per waggon, and a similar quantity for Sicily at £11 5s. There are, furthermore, considerable quantities in the market for Sardinia, for which destination £10 5s. is offered, and also for Oran at £11 10s. For Greece the activity is slight, and only small engagements are being recorded at £8 10s. per waggon. Syria is also attracting tonnage, but no rates higher than last week are being offered. The rate of £11 indicated for Alexandria last week was due to an error, the rate then being only £7 15s. and now about £7 5s.

Weather and Crops.—The mild and cloudy weather continued till Thursday, the 21st, but the temperature has been lower and light frosts have been experienced throughout the country the last few nights. The intermittent rains which prevailed recently, and which were relatively heavy last week, became lighter and more rare, and ceased towards the end of this week. Even the few hitherto dry districts in Central Bessarabia have ceased to complain of lack of moisture, and though one or two other districts complained recently of too much rain having delayed autumn sowings, on the whole the conditions have continued to be excellent. There is no news yet as to the extent of the sowings, which are already completed in some districts but are being continued in others. Since Friday morning it has been bright and dry here and more favourable for the handling and shipping of new maize.

Sulina.—Bar depth, 24 feet. Stormy weather interfered with dredging operations at the beginning of the week, but the dredgers continued to work when conditions permit. River depth, 24 feet. The water in the river continues to rise, and the minimum depth remains at 24 feet in the navigable channel.

The following modification in the application of dues was issued by the Commission of the Danube in addition to that reported last week:—"During the period from December 15, 1929, to March 15, 1930, the navigation tax provided by Article 1 of the tariff for sea-going vessels which load or discharge in the port of Sulina (tax "B") is reduced from gold francs 3.50 to gold francs 2.85 per ton, and the tax provided by Article 2 for river vessels which load or discharge in the port of Sulina (tax "E") is reduced from gold francs 0.40 to gold francs 0.05 per ton. This exceptional measure will terminate from March 16, 1930."

Constantza.—This week about 9,500 tons of grain arrived from the interior and over 11,000 tons were shipped to the Antwerp/Hamburg range. Fourteen vessels loaded about 45,000 tons petroleum products, and six took oil fuel for bunkers.

Bulgarian Report.

Bourgas, November 16.—The grain market continues to be quiet and no fresh transactions have been concluded.

Bourgas, November 23.—There is no change to report in the grain market, which remains weak. There has been a slightly improved demand for tonnage, due to sales concluded some time ago, principally for maize. Moist weather has continued with a much lower temperature. Autumn sowings are being continued under favourable conditions and are nearly completed throughout the country.

In their report for the week ended November 30 Messrs. Watson and Youell state:—

Grain.—Grain markets continued very quiet with prices steadily falling. There was, however, a certain activity on our market due

mainly to the shippers' effort to fulfil old sales for shipment in December before bad weather sets in. Fair quantities of maize have therefore been shipped to Rotterdam, whilst shipments of barley to the Weser and Hamburg have been maintained. Owing to the supply of tonnage having been adequate to the demand, and to the likelihood of the former not running short during the coming week, shippers are not contemplating the necessity of dispatching any grain to Sulina yet, although it is possible this will be done with the first indications of wintry weather. Freight rates have, as expected, gradually improved, and from 15s./15s. 3d., which was paid at the beginning of the week, 16s. is now freely paid for Continental destinations, with every probability of this rate being exceeded next week. The situation at Constantza has likewise improved and rates have risen to 10s. for the Continent. Tonnage is running short of the demand, and prospects are that more will have to be paid next week.

Timber.—In view of the weak tendency of the market and the approach of the end of the season for regular shipments from the Danube, operations are mostly limited to the execution of old contracts. A few comparatively small new transactions, however, are reported as having taken place for Greece, for which destination the present rate is now £8 15s. to £9, and for Syria £11 to £11 5s. is still being quoted. Parcels which have remained uncovered for Spain and North African ports will probably not find any tonnage and will be left over for shipment in the spring.

Weather and Crops.—The dry weather which set in last week continued over Monday, after which it again became dull and damp, light, intermittent rains or snow falling throughout the country, and though the total amount of precipitations has not been great, it again somewhat hampered the handling of new maize. Yesterday, however, the weather turned dry again here. Light frosts have been general in the higher parts (Transylvania, Bukovina, etc.), but at the ports, although the temperature has generally been low, it has not fallen below freezing point since the beginning of the week, and to-day it is much milder. There has been a further considerable rise in the volume of water in the Danube and it would require a severe and prolonged frost for the close of navigation to become imminent. A Government report states that autumn sowings have been completed in Transylvania and Bukovina.

Sulina.—Bar depth is officially advised as being 24 feet, although during the last nine days stormy weather has not permitted accurate soundings to be taken. River depth: 24 feet in the navigable channel, with the water still rising. It is announced that the Governments of Great Britain, France, Italy, and Roumania have now definitely approved the raising of a loan by the European Commission of the Danube of eight and a half million gold francs. It is expected that on the basis of this authority the necessary funds will be available early next year and that the completion of the works at Sulina will be pressed forward energetically as soon as the weather permits.

Constantza.—This week about 10,500 tons of grain arrived from the interior and about 18,000 tons were shipped, mostly to Antwerp/Hamburg range. Nine vessels loaded about 30,738 tons petroleum products and five took oil fuel for bunkers.

Roumania has reimposed the import duty on maize of 36 lei per 100 kilograms.

This year's tobacco crop in Bulgaria amounted to 25,000,000 kilograms.

The Spanish Cabinet has approved the recommendations of the further conference on Traffic in Opium and the Arbitration Conventions with Greece and Czechoslovakia.

The opening of the first part of the drainage works in the plain of Salonika took place on November 25, when M. Venizelos opened the sluice by which the waters of Lakes Ardzan and Amatovo will be sent by an eight miles long canal to the Vardar. On the completion of the canal in February a large area of arable land will be available for cultivation.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) EGYPT.

Cloth.—The Frontier Administration of the Egyptian Ministry of War and Marine invites tenders for the supply of various cloths for the making of uniforms. January 14. (D.O.T.)

Paper, etc.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper, inks, adhesives, stationery, and materials for Photo-Copying Office, required for the year 1930-1931. February 17.

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, sheets, woollen blankets, napkins, and textiles required for the year 1930-1931. January 30.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of 6,800 metric tons of asphalt for the Tanzim Department, Cairo. February 3. (D.O.T.)

Bedsteads.—The Department of Public Health, Cairo, invites tenders for the supply of iron bedsteads. December 28. (D.O.T.)

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Luxor. The principal materials required are 10,850 metres of steel tubes of various sizes from 80 m.m. to 300 m.m. internal diameter, together with specials, 58 sluice valves, 15 hydrants, 7 column hydrants, and 6 drinking fountains. January 7. (D.O.T.)

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping machinery. The contract involves centrifugal well pump and direct coupled electric motor, together with piping and accessories. February 1. (D.O.T.)

Transmission Lines.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of high tension 3-phase overhead transmission lines in Northern Delta, consisting of a main line of about 165 kms. and branch lines of about 150 kms., including all necessary materials for the lines and all accessories. February 27.

Diesel Engines.—The Ministry of Public Works, Mechanical and Electrical Department, invites tenders for the supply and erection of two Diesel engines and accessories. January 4. (D.O.T.)

Direction Indicators.—The British Commercial Secretary at Cairo (Mr. R. M. A. Turner, O.B.E.) has reported a possible opening for the sale of direction indicators for motor buses and taxicabs in Egypt. (D.O.T.)

YUGOSLAVIA.

Tin.—H.M. Consul at Sarajevo reports that a local firm desire to receive offers from British firms for the supply of 5 tons of "Banka" or "Straits" tin. (D.O.T.)

Mahmoud Fahry Pasha, Egyptian Minister in Paris, addressed the International Conference, which is considering the treatment of foreigners, on November 6.

Notes of the Week.

Egypt in the House of Lords.

Wherever the Egyptian problem is discussed in Great Britain there is agreement that the goal to be aimed at is a settlement that will combine the independence of Egypt with the securing of the essential interests of Great Britain. There can be no question now of going back upon the Declaration of 1922; but it is, perhaps, inevitable that those who have watched closely the development of the country under British supervision should be the more anxious that the system of government which implements Egyptian independence should not be one calculated in any way to hinder the moral or material progress of the country. In the debate in the House of Lords last week, the motion submitted by the Marquess of Salisbury raised only the question of the precipitancy of the British Government's policy. Lord Grey decided that the issue lay between two broad policies, the re-establishment of the Cromer régime and the carrying out of the 1922 Declaration to its logical conclusion. He realised that the basis of the former was consideration for the welfare of the Egyptian people, but he pointed out that no improvement in the position of the fallahen strengthened the British position in Egypt politically. Emphasising the fact that it is for the welfare of the masses of the people that those who have lived for so many years in the East are concerned, Lord Lloyd declared that the proposed Treaty would give them "in exchange for the steady, wise and restraining influence of British guidance during the inevitably difficult process of the growth of parliamentary institutions amongst a dumb and illiterate people the vicissitudes, uncertainties and possible violences which are bound to attend such a growth when this experienced guidance is prematurely removed." Lord Grey said: "I am not suggesting that the self-government of Egypt will be from our point of view as good for the country as that which existed when she was bound to accept the guidance and control of Lord Cromer . . . but we cannot undertake responsibility against the will of the people of a country, simply because we believe that we shall be doing their affairs better than they do them themselves." Therein lies the real crux of the situation, differentiating Egypt from India or any other country within the British Empire. The retention of the Cromer régime is incompatible with the Declaration of 1922, except in

so far as Egypt refuses to arrive at an agreement on the points reserved for future discussion in that Declaration, and retains by such action the *status quo*. The essential interests of Great Britain, however, must be secured, and it rests with the Egyptians to decide whether by rejecting the unexpectedly generous terms now offered them they will miss the substance in order to grasp at a shadow.

President Zaimis.

It was a foregone conclusion that, when Admiral Kondouriotis found himself at last compelled to resign the presidency of the Greek Republic, his successor would be M. Zaimis, if M. Venizelos decided that he could not accept the post. For many years past the new President has exercised a moderating influence in Greek political life, and there is no one in Greece of the same political authority who has contrived to lift himself out of the hurly-burly of politics, while retaining to the same extent the general esteem of the people. M. Zaimis was, therefore, eminently fitted for the Presidency, and it is of interest to note that his election has been the occasion of fresh *rapprochement* between Greek political parties. As if to lend point to his contention that the old antagonism between Royalists and Venizelists had been eliminated, M. Venizelos appointed to his Cabinet a few months ago M. Gonatas, who as chief leader of the movement that led to the execution of M. Gounaris and his five colleagues may be said to have had a major share of the responsibility attaching to that grave blot in Greek political life. The challenge was too much for the Monarchist party under M. Tsaldaris, who withdrew with his followers from Parliament as a protest against the appointment. The intensity of Monarchist feeling on the subject came, no doubt, as a surprise to the Prime Minister, but he was not prepared to admit that he had made a mistake. His efforts to induce M. Tsaldaris to reconsider his decision had previously failed, but the election of a new President provided an opportunity for the Government to take the formal step of resignation, and for M. Gonatas to surrender his portfolio of his own accord. The Cabinet has been reformed without him, and peace has been re-established between the political parties. M. Zaimis's Presidency, accordingly, begins under the best possible auspices.

Yugoslavia's Sokol Organisation.

In furtherance of its policy of unification the Yugoslav Government has now turned its attention to the Sokol organisations of the country. These athletic, or primarily gymnastic, associations had acquired the particularist character of other organisations in Yugoslavia and served to keep alive the separatist tendencies of Serbs, Croats and others. At the same time they lacked uniformity even in the matter of physical training; but it was mainly owing to their political leanings that the present régime had found it necessary, in a new Education Law, to forbid pupils of the Middle Schools to join any of the three chief Sokols. To overcome the various shortcomings of the latter the Government had to choose between a union of the existing organisations, the selection of one to be responsible for the future training of the youth, or the creation of an entirely new organisation. The choice has fallen on the latter. In future there is to be a single Yugoslav Sokol, which existing bodies can join as component parts; otherwise they are to be dissolved within three weeks. The new Sokol will comprise adults, younger men and children; it will be under a Board officially appointed, and its aim will be to impart uniform drill, national discipline, and military fitness to the Yugoslav youth. There will naturally be some heartburnings over the change from independent Sokols to one national institution, and the Croat Sokol has decided to dissolve rather than to join the new organisation. The success of the new scheme is likely to turn largely on the tact and vision with which the movement is directed at the outset. Its fortunes, too, are inevitably linked up with the bigger project for the unification of the Kingdom, by its partition into nine administrative units superseding the former provincial divisions. In striving after the complete unity of Yugoslavia the Dictatorship has set itself a high patriotic aim, but the permanency of the step has yet to be shown. If the report that a revival of constitutional government is now contemplated be confirmed by the event, it may be that with a parliamentary safety-valve the nation will be more reconciled to give the new system of decentralised administration a fair trial.

Arab-Zionist Reconciliation.

The weeks are passing with little visible sign of the hand of reconciliation being extended between Arab and Jew in Palestine. On the Arab side, the movement in favour of reducing Jewish ambitions in Palestine to the dimensions of a "Cultural Home" shows growth, but no

very practical suggestions are, so far as we know, being made on how to gain Jewish consent to the Arab proposal. On the Jewish side, the attempts hitherto made, at least by such men as Dr. Magnes and Dr. Bergmann, have been widely denounced as "defeatist": it is a boast, indeed, among the Jewish people, that but for the untimely declaration of such "irresponsible" men as the Chancellor of the Hebrew University, the people of Israel have shown a united front in presence of the events in Palestine of last August. Psychologically, it might therefore seem, the time is not ripe for talk of compromise and reconciliation. It is in vain, apparently, that there have been uttered the memorable words of Professor Einstein: "I am in absolute agreement with the attempts at *rapprochement*, and it is necessary that this movement should be supported with all their force by non-Palestinian Jews." Well, the Jews know their own people best, and no doubt have the most cogent of reasons for rejecting what might seem to the less intimately interested observer to be the counsel of sagacity. It is doubtless true that only between Arabs and Jews in Palestine itself is effective reconciliation possible, if only for the reason that any compromise which might be arrived at outside Palestine might be held, by each party respectively, not to be binding on the Arabs and Jews in Palestine. Even so, little harm could be done by such an attempt to come together.

Europeans in India.

The attitude of Europeans in India—by which we mean largely the non-official community—towards Constitutional progress has been defined on many occasions in these columns. It may generally and briefly be described as sympathetic to Indian aspirations, but not blind to the obstacles in the way of advance. In particular the mercantile community is determined to see that so far as lies in its power no minority is wilfully placed in a position of disadvantage or penalised because of its numerical smallness. On the other hand, it is in no sense reactionary or die-hard in its views or willing to be a party to any movement intended to make any real progress impossible. We are glad, nevertheless, that at the first Annual Conference of the European Association to be held in Bombay Mr. W. L. Travers, the President, took the opportunity to restate and define the Association's object and policy. Its main objective, he said, is defence; it could never be defiance. While Europeans in India would defend every attack upon their rights, their legitimate livelihood and their trade and commerce with all the vigour and energy of which the British were capable, they hoped and trusted that their position would not be assailed, for they earnestly desired to co-operate with their Indian fellow-subjects in all progressive movements. Especially were they anxious to aid in social reform, in the fight against disease and in everything that tended to raise the standard of life of the poor.

EGYPT AND GREAT BRITAIN.

(Continued from page 675.)

critics in England as well. Although the Government spokesmen indicated that the terms, while laying down the policy of Great Britain, need not be regarded as having taken final treaty shape, and could, therefore, be made to meet the potential difficulty presented by the Optional Clause, it would be contrary to all the Government's statements on the subject that there should be any material modification of the terms in Egypt's favour. If, therefore, the present offer of a treaty is rejected by Egypt there must still be echoes of the "Cromer régime" in the country, on the lines laid down by the Declaration of 1922. It would only entail self-deception, if Egypt sought to persuade herself that she might enjoy independence without any treaty and yet be free from the "Cromer régime."

EGYPT AND GREAT BRITAIN.

The debate on Egypt in the House of Lords last week was a valuable contribution to a better understanding of the Egyptian problem by all who take any interest in the subject. It may be necessary, however, for the full report of the debate to be studied, if some of the most useful points in the discussion are not to be missed. The question at issue is the establishment of Anglo-Egyptian relations on a firm, friendly and lasting basis, or, as it has been expressed in other words, to establish the independence of Egypt and secure the essential interests of Great Britain. This end cannot be achieved unless and until Egyptians and Britons are both satisfied that the shortcomings which each nation has identified with the other, on the strength of past experience, have given place to a better state of affairs. For the sake of argument we may imagine the extreme point of view on the two sides to be as follows: the Egyptians see in the British a people who took forcible possession of their country fifty years ago and, in spite of repeated assurances of an intention to evacuate it at an early date, having remained in occupation until the present time, show a strong reluctance to adopt the Egyptian version of what constitutes sovereign independence; a strong section of British opinion, on the other hand, pointing to the experience of the last fifty years, and in particular to actual events during the last decade, is convinced either that Egypt cannot be relied upon to maintain unswerving loyalty to Great Britain even when bound by a treaty of alliance, or that certain national weaknesses will, in the exercise of independence, set back the clock in the country, to the undoing of all that has been achieved under British supervision, and to the grave prejudice of the interests both of foreigners and of the Egyptians themselves. Is it possible to find any common meeting ground for these two opposing views, and can it be looked for within the four corners of the proposed terms of an Anglo-Egyptian Treaty?

Not the least valuable contribution to the debate in the House of Lords was Lord Grey's concise statement of the British position in Egypt, which should go a long way towards clarifying the views of Egyptian Nationalists. When Lord Cromer first went to Egypt, said Lord Grey, he made a declaration that the ultimate object of British policy in Egypt was to fit the Egyptians for self-government.

He was going to establish it as a going concern and then it was to be handed over to the Egyptian Government to keep the concern going. That was the ultimate object originally. In spite of all the work that Lord Cromer had done we must recognise that, when he retired, we were further from that objective of self-government for Egypt than we thought we were at the beginning. It had become apparent not only that the good work done in Egypt was due to British initiative, but that the maintenance of it was also due to continued British control such as Lord Cromer exercised.

Again, on the subject of pledges, Lord Grey pointed out that, when the War came, we established a Protectorate in Egypt, for, as he thought, two reasons. The first was to regularise our position in Egypt, and the second to cut the connexion between Turkey and Egypt "which had always existed and had prevented Egypt from being an independent sovereign State on account of the suzerainty of Turkey." Great Britain's position in Egypt had never been regularised.

It was most irregular, because all the time Lord Cromer was doing his work we had the uncomfortable feeling in our minds that, when we went to Egypt, we said that we were not going to stay there. We did not, it is true, make that a pledge to any Power. It was a pledge to the House of Commons, and the House of Commons never insisted upon its being kept.

Another point that Egyptian Nationalists may bear in mind is that, however much British opinion may be divided as to the method of implementing Egyptian independence, no one loses sight of the real interests of the Egyptian people. In the debate in the House of Lords Viscount Grey declared that he differed widely from the policy advocated by Lord Lloyd, but he recognised that the latter's policy was one of "protecting the masses," and as such it is difficult for it to be wholly condemned in Egypt without the raising of fears that the protection of the masses does not commend itself to the vocal section of Egyptian opinion. For the better adjustment of the views of extremists in Egypt it may not be out of place here to remind them that it was Lord Lloyd who in the early days of his High Commissionership pressed upon the British Government, as an essential corollary of the 1922 Declaration, the need for fresh elections after Parliament had been suspended owing to the murder of Sir Lee Stack, and who negotiated the Nile Waters Agreement, which, as it gave Egypt a voice in the control of the waters of the Uganda Lakes, might well have prompted a country more free from political obsessions to acclaim its author as a national benefactor. If, therefore, the embodiment, from the Egyptian point of view, of British Imperialism thus manifests his concern for the well-being of the country, it should not be difficult for Egypt as a whole to believe that Great Britain is now approaching the subject of the settlement of Anglo-Egyptian relations with genuine sympathy for the people's interests, and without more insistence upon reservations than the vital interests of the British Empire require.

The fate of the proposed Treaty still hangs in the balance. If Egypt is concerned to see it signed and ratified, and would, therefore, wish to forestall adverse criticism of it in Great Britain, she has only to examine what may be said to be the extremist point of view in England, in order to see how she can remove the misgivings that underlie any opposition that there may be to the proposed Treaty. The record of the past ten years stands, but it should not be difficult to convince the most sceptical that the intrigue and unrest which characterised the struggle against British tutelage will have no place in an independent Egypt. The Declaration of 1922 in declaring Egypt to be an independent sovereign State signified that the "Cromer régime" was at an end. It was, however, a unilateral document, issued by Great Britain without consultation with Egypt; it, therefore, specified certain points on which bilateral agreement would be necessary for the proper rounding-off of Egyptian independence, and a settlement on these points was invited. The final clause in the Declaration stated that pending the conclusion of such agreement the *status quo*, in other words, the "Cromer régime," remained intact. The quarrel between the Wafd and Lord Lloyd was fought out over this document. The Wafd insisted that there should be no agreement and tried to convince itself that there need be no "Cromer régime" in the meantime; but from Lord Lloyd they learned that the "Cromer régime" could still be an effective factor in Egyptian administration, under the strict interpretation of the 1922 Declaration. There can be little doubt that his High Commissionership was the means of making those who were previously opposed to any treaty realise that there is much to be said from Egypt's point of view for rounding-off Egyptian independence on the lines suggested by the British Government. The proposed terms for a treaty offered to Mahmoud Pasha represent the last stage reached so far on the road to an Egyptian settlement. They are understood not to meet all the wishes of the Wafd: the debate in the House of Lords showed that they have their

(Concluded at the foot of the previous page.)

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, December 7.

The Residency.

It is officially confirmed that the High Commissioner will leave here for the Sudan on the 17th or the 20th instant. This will be Sir Percy Loraine's first visit to the Sudan, which, of course, comes within his jurisdiction as High Commissioner. He will be accompanied by Lady Loraine, and possibly by Mr. R. E. More, who, it is understood, is vacating his position as Sudan Agent the coming summer.

According to present arrangements the Residency party will proceed from Khartoum by steamer up the White Nile to Kosti. Then Sir Percy will leave and fly across the Gezira to a point on the Settit River, where arrangements are being made to provide him with some big game shooting. The party will meanwhile return to Khartoum and go up the Blue Nile to meet the High Commissioner, who will return with them to Khartoum. After a short stay there the journey will be taken back to Egypt, where they are due to arrive on January 10.

The Elections.

From the fact that the High Commissioner is leaving just before the elections and that he will not return until the eve of the opening of Parliament it may be deduced that in official circles little development in the political situation is anticipated in the interval. It is expected that as a result of the elections and according to precedent the party obtaining the majority, in this instance certainly the Wafd, will take office before the assembly of Parliament. But evidently this is not expected to give rise to anything necessitating the consideration of the High Commissioner, so that one may take it that there will be no serious difficulty in connexion with the selection of the members of the new Cabinet. In this respect it is generally anticipated that Nahas Pasha will become Prime Minister, and that Adly Pasha will revert to the Presidency of the Senate, which he held when Parliament was suspended in July, 1928. The decree was issued for the holding of elections on February 15 next year in Sinai. The reason for the delay has been the great distances between centres in that district.

The Alexandria Consulate-General.

Since writing the paragraph, about a fortnight ago, on the promotion of Cairo to a Consulate-General, I have

come into possession of some interesting data about the Alexandria Consulate. After the battle of the Nile the British representation was carried out by what was known as the Levant Company's Consulate, and it is recorded that the incumbent in 1801 was a certain Samuel Briggs, who was succeeded in 1810 by Mr. Peter Lee. The Levant Company's Office was abolished in 1826, when a proper Consulate was established, the first Consul under the Crown being Mr. John Barker, who became Consul-General in 1827 and held that post until 1833. His descendant is Sir Henry Barker, who was President of the British Chamber of Commerce and head of the British Community in Alexandria two years ago.

The Royal Opera House.

The season at the Royal Opera House opened this week with a series of performances by the official troupe of the Comédie Française under the direction of M. Bernard. The inaugural performances of "La Primerose" and "L'Avare" were great successes, M. Denis Ives' portrait of Harpagon being particularly good. Cavaliere Dalbagni seems once again to have done well by the cast he has engaged, perhaps even better than last year, which was a marked improvement on anything since the Armistice.

The Egyptian Stage.

A propos of the theatre, it is very unfortunate that the Arab theatre has of late been written about so disparagingly in the Press abroad. For one has only to go to the Ramses' Theatre, where Youssef Wahby gives nightly performances, sometimes of purely Egyptian plays, sometimes of adaptations from the best British authors, to realise that the conduct of the proceedings in the body of the theatre is as decorous as the performances on the stage are excellent. Youssef Bey Wahby is himself a really great actor, and he has collected round him a most talented party of Egyptian actors and actresses. It is, indeed, surprising that more Europeans who understand Arabic do not patronise his theatre, for he is doing great things for Arab drama and is deserving of every encouragement from all lovers of the stage.

IRAQ.

Baghdad, November 27.

Funeral of the Premier.

The funeral of Sir Abdul Muhsin Beg as Saadun, whose tragic death by suicide was reported in your Correspondent's last letter, took place on November 15, and was the occasion of a great public manifestation of grief. Weeping crowds filled the streets from the Premier's house to the Gailani Mosque, where the burial took place, and the wailing of women as the procession passed was incessant. The route was lined by troops and police, and a squadron of mounted police headed the cortège. The

coffin, enveloped in the Iraq flag, was trailed by a military motor car and escorted by the Deputy Commander-in-Chief of the Iraq Army, the Director-General of Police, the Commandant of Iraq Army (Baghdad Area), and the Commandant of Police, Baghdad Liwa.

King Faisal was represented by his son, the Amir Ghazi, with whom were the senior officials of the Court. The Acting High Commissioner and his staff were followed by the Presidents of the Senate and Chamber of Deputies and by the Ministers of the Cabinet. Foreign diplomatic representatives, senators and deputies, and all the senior officials of the Government, both Iraqi and British, followed, and every branch of public life in Iraq was fully represented.

On nearing the mosque, the coffin was carried on the shoulders of Baghdad lawyers. A short memorial service was held, and the burial took place to the booming of fifteen guns.

The King replied to the Acting High Commissioner's personal letter of sympathy in the following terms:—

My dear Young,—I thank your Excellency for your letter of yesterday, and for the heartfelt expression of sincere sorrow which it contained for the loss which we have suffered through the death of our dear friend the late Abdul Muhsin Beg. The loss is especially calamitous at this juncture, when our united endeavours were directed with all energy and enthusiasm towards harvesting the fruits of the long-sustained efforts which we have made to prepare the country for the most auspicious future to which the nation could aspire.

The loss would have been easier to bear if he had been taken from me in any circumstances other than the present, when he and his colleagues were so evidently delighted at the help which His Britannic Majesty's Government are giving towards the fulfilment of the hopes of the country, and which your Excellency has been seconding by giving an opportunity to Ministers to carry out their duties in accordance with their ministerial programme. But his loss now, after the loss of my friend Sir Gilbert Clayton, is an irreparable disaster.

At this sad moment I can only take refuge in patience, and repeat your Excellency's own valuable words. May God enable us to realise the end for which these two dear departed ones laboured so devotedly!—Your sincere friend,
FAISAL.

The King paid homage to the body of his late Minister early on the Saturday morning, afterwards expressing his sympathy with the members of his family. Ex-King Ali also paid a visit of condolence. During that day and the next the *fatihah* was attended by a stream of notables and mourners of all classes.

The lawyers of Baghdad, at a meeting held on Saturday, decided to request the Government to grant life-time pensions to the family of the late Premier. It was suggested that his house, which is Waqf property, should be purchased and presented as a gift to the Saadun family, the outer reception room being retained by the nation as a hall in which to celebrate the anniversaries of the Prime Minister's death.

Plans for the erection of a memorial statue to the late Prime Minister are already under consideration.

Mourning.

All Mutasarrifs at Liwa headquarters were ordered by the Cabinet to observe three days of mourning. A special register was opened in the Council of Ministers for the names of persons who wished to offer condolences to the Government of Iraqi. Among the many telegrams received were messages of condolence from Sir Henry Dobbs and from the Grand Mufti of Jerusalem. In the Chamber of Deputies on Saturday the Ministers' seats and those of the President and the Parliamentary clerk were covered with black cloth, and every deputy present wept and lamented for the dead Premier. The House observed a five minutes' silence as a mark of grief. After the sitting the Deputies went in a body to the Council of Ministers to register their condolences. The next sitting, on November 28, is to be devoted to the recitation of prose and verse in celebration of Abdul Muhsin's services to his country.

The New Cabinet.

A royal *iradah* was issued on Monday forming a new Cabinet under Naji Beg Suwaidi, who was Minister of

Interior in the late Cabinet. In a short speech the new Prime Minister said that he could not be glad to succeed Abdul Muhsin Beg so soon after his death, but the wish to follow in his footsteps as a patriot had led him to accept the King's invitation. The Ministers accepted no felicitations, but as soon as they had been officially installed proceeded to the Gailani mosque, where they paid homage to the late Premier.

BULGARIA.

Sofia, December 2.

The Treaty of Neuilly.

On November 27 Bulgaria celebrated in national mourning the tenth anniversary of the signature of the Treaty of Neuilly. Monster meetings were organised for the occasion, and speakers from all the political parties dwelt on the lamented situation in which the Treaty of Neuilly had placed Bulgaria, emphasising the necessity of revising the conditions of peace and protesting violently against the reparations.

This movement of protest was directed by a Nationalist organisation called "Otetz Paisy," that is to say, Father

Paissy, the obscure monk who, on Mount Athos, laid the foundations of the Bulgarian renaissance, at the end of the eighteenth century, in writing the first history of the Bulgarians. At the head of this Organisation is the Metropolitan of Sofia and Archbishop of Bulgaria, Mgr. Stephan, assisted by the Rector and several Professors of the University, as well as by a certain number of prominent men in the country. This organisation has succeeded in uniting the nation in a protest against the territorial, political, and financial stipulations of the Treaty of Neuilly, describing this Treaty as an act of violence and revenge on the part of the conquerors towards the conquered. It had been wished to organise public demonstrations against the Treaty and especially against the reparations, but the Government forbade such a step.

The students of the two Universities in Sofia held a public meeting on November 27, when a resolution was passed asking for the restoration to Bulgaria of the territories detached from her by the Treaty of Neuilly, that is to say, the regions of Tsaribrod, Trn, Bossilegrad, and Strumitza, the complete abolition of reparations, the execution of the clauses relating to the protection of minorities and Bulgarian access to the Ægean Sea, and, finally, the revision of the Treaty of Neuilly in accordance with the provisions of Article 19 of the Pact of the League of Nations.

But side by side with these purely patriotic protests, there were also made apparent on November 27 certain anti-Government tendencies, notably on the part of the Bulgarian Fascisti, who are taking on more and more the nature of a political party.

Italo-Bulgarian Relations.

The settlement of Bulgarian reparations, which appears to be fraught with almost insuperable difficulties, and in which Italy, who is principally interested, has not shown herself very conciliatory towards Bulgaria in her efforts to obtain a reduction of the sums fixed by the committee of experts in Paris, seems likely to involve a serious influence upon Italo-Bulgarian relations.

The reserved attitude of the Italian delegation at Paris in the discussion upon the settlement aimed at has been the object of some bitter comment in the local Press, in which it has been pointed out that Italy, which for years has not ceased to assert its friendship with Bulgaria, supported the claims of the Greeks to the detriment of Bulgarian hopes—for which there was no cause for wonder, Greece being an ally of Italy, while Bulgaria was only a "friend of the heart" who chose to follow Italian policy in the Balkans. As a result there has been a certain coldness in the relations between Bulgarians and Italians, and this coldness is becoming more and more apparent.

This state of affairs is complicated by the unsatisfactory personal relations which have existed for some time between the Italian representative in Sofia, Signor Piacentini, and the Minister for Foreign Affairs, M. Bourroff, whom the Italians suspect of being excessively Francophil.

A Sofia journal, the *Outro*, having offered, in an elucidation of the point of view of each of the three Great Powers on the question of Bulgarian reparations, to publish an *exposé* of each of them under the form of an anonymous correspondence from the respective capitals, the Italian Minister took advantage of the occasion, in an unsigned article, to formulate a series of grievances against the Minister for Foreign Affairs, accusing him of having always misconstrued Italian friendship and of having neglected to notice a formal invitation from Signor Grandi, Italian Minister of Foreign Affairs, who suggested to M. Bourroff that he might come to Rome, before the Paris Conference, in order to come to an understanding on Bulgarian demands and Italian support. To this invitation M. Bourroff is said not even to have deigned to reply, thus upsetting considerably the Fascist Government, which is now reproached for not having helped Bulgaria at the conference on Eastern reparations. This article ended with an allusion to the possibility of clearing up the matter at the last moment by a step which Italy

would be willing to take, if Bulgaria would disavow the policy of her Foreign Minister. To this direct attack on M. Bourroff, the *Mir*, considered as the organ of his friends in the Government group, had the unfortunate idea, not knowing the origin of the attack, to reply with a formal denial, which it thought it could substantiate by a statement to the effect that Italian circles in Sofia were themselves indignant at the unfounded assertions of the *Outro*. The following day, Signor Piacentini called upon the Editor of the *Mir* to deny his own denial, and, as he was not satisfied with the *contre-démenti*, he inserted in the Press a notice declaring that neither the Legation nor he himself personally had authorised anyone to challenge the publication of the *Outro*—which indirectly emphasised that the assertions contained in this publication were supported by the Italian Legation.

This incident, which showed very clearly the source of the article in the *Outro*, raised a considerable scandal in political and diplomatic circles, both Bulgarian and foreign. The conduct of Signor Piacentini was interpreted as an attack on the Minister of Foreign Affairs and thus as a direct intervention in the affairs of the country. This scandal was not really extinguished by a declaration which M. Bourroff at once made in the *Sobranie*, in answer to a question by the Democrat leader, M. Monshanoff, to the effect that he had nothing in common with the *Mir*, and that this journal was not his own property, as was generally believed. This declaration, which reduced the matter to a simple polemic in the Press, was in effect an invitation to Signor Piacentini to say out that he was responsible for the charges laid down in the alleged correspondence in the *Outro* against the Foreign Minister.

Signor Piacentini has preserved a guarded attitude, and the affair has not developed, but it has left a very painful impression on Bulgarians, who have seen in it an intolerable interference in their own affairs—quite apart from their appreciation of the work done by their Foreign Minister.

The Settlement of Reparations.

The Bulgarian Government has not yet replied to the *démarche* of Italy, France, and Great Britain, who urged that it should agree to an annual payment of 12½ million gold francs for 37 years as a settlement of reparations.

In the meantime, an attempt has been made to arrange, in Sofia, fresh negotiations with the Governments interested, or at any rate with the three Great Powers, to obtain some supplementary concessions—for the country, impoverished and ruined, cannot sustain a charge of 12½ million francs for reparations.

After a new examination of the situation, the Council of Ministers has just charged the Ministers of Foreign Affairs and Finance, MM. Bourroff and Moloff, to establish personal contact with the Governments of the three Great Powers in a last attempt to obtain a satisfactory settlement of Bulgarian reparations. MM. Bourroff and Moloff will visit Rome, Paris, and London before going to The Hague, where they will represent Bulgaria at the next international conference.

Macedonian Emigrants.

The bloody rivalry that has raged for more than a year between the two factions of Macedonian revolutionaries has failed to impair, as it has been shown in the last few weeks, the unity of the lawful organisations of Macedonian emigrants in Bulgaria, who are directed by a National Committee.

To avoid the dissensions which threatened to split it, the National Committee hastened the convocation of the annual congress of Macedonian emigrants. When the delegates recently assembled, the Committee explained its line of conduct, and a free vote was taken on it. The congress, which one had feared might be transformed into an arena of strife, was conducted in a calm atmosphere. The Macedonians realise the gravity of the situation and the necessity of making personal sacrifices in the one aim of saving their unity. Every speaker was animated with this spirit. The Congress instructed the new National Committee to hold itself aloof from the broils of the

revolutionaries, though it did not conceal its preference for the faction of Ivan Mihailoff, the faction of the Protogueroffists being indirectly proclaimed dissident.

Whether the congress will liquidate the crisis one cannot tell; but it will certainly produce a *détente* in the ranks of Macedonian emigrants in Bulgaria.

Bulgaro-Roumanian Relations.

A sudden crisis has arisen in the relations between Roumania and Bulgaria. It comes about over the Bulgarian property in Roumania which has been sequestered by the Roumanian Government in virtue of its rights under the Peace Treaties. Ever since 1922 the Bulgarian Government has been trying to free this property. Pourparlers have been long and complicated. Finally, to secure a prompt and friendly solution, the Maniu Cabinet proposed a new basis of negotiations, asking, not for a pecuniary indemnity which Bulgaria could not pay without deducting it from her reparations debt, but for certain economic advantages concerning the entry of its principal articles of import into Bulgaria, namely, salt, petrol, and timber for building. The Bulgarian Government agreed to negotiate on this basis, and the negotiations at Bucharest were already advanced when, following the discussions at Paris on reparations, Roumania, seeing that after the liquidation of reparations the question of sequestration could not be also liquidated, suddenly decided to proceed to the sale of these properties before the meeting of the new conference at The Hague.

This decision provoked deep indignation throughout Bulgaria. The Bulgarian Government immediately addressed a formal protest to Bucharest and is preparing to bring the matter before the League of Nations.

TURKEY.

Istanbul, December 4.

Friday or Sunday.

Reports from Ankara point to a recrudescence of the agitation in official circles for the adoption of Sunday as the national day of rest. The populace is said to be indifferent to the outcome of these proposals, which were first mooted last year. The current of opinion among the deputies in favour of the change was apparently not strong enough at that time to warrant any action by the Government. Matters would appear to have moved rapidly of late, however, as the Government itself is reported to be about to lay on the table of the Assembly a draft law providing for the contemplated change.

Festina lente may be a wise maxim to apply in certain circumstances, but it has taken a very long time to establish the fact officially that two *dies non* in the trading week have had a singularly detrimental effect on the activities of the Turkish markets in their relations with Continental and overseas countries. It is not improbable that, before long, Saturday will become early closing day in Istanbul, as a corollary of which the English "week-end"—"la semaine anglaise," may be expected to become part of the local time-table.

"The Artful Dodger."

Some two days ago, a couple of hefty porters transporting a heavy wardrobe appeared in one of the poorer

quarters of Stamboul and inquired for the whereabouts of Hadji Arif Effendi's dwelling house. The latter, the most prosperous looking edifice in the neighbourhood, was pointed out to them by some street urchins, whereupon they rapped at the door-knocker and informed the lady chatelaine that Hadji Arif Effendi had ordered them to leave the wardrobe at his home. It is strange, thought the good woman, that Hadji should not have mentioned anything to me about the matter when he left the house this morning, but he has probably picked up something cheap somewhere, as he often does. She accordingly ordered the men to leave the piece of furniture in the entrance hall, which they did. After receiving a tip, they departed and the lady withdrew to the upper part of the building. A gentleman accommodated in the wardrobe, unlocking the latter from inside, thereupon stepped out into the hall holding something like a fisherman's creel and proceeded to ransack the whole of the lower stories of the building, whence he removed everything portable in the way of cutlery, plate, jewellery and cash, returning with them to the wardrobe, within which he ensconced himself, taking care to lock the door behind him. About half an hour later, the two porters again called to say that they had made a mistake, that the wardrobe had been purchased by a certain Hadji Eumer and that they proposed removing it to the latter's residence. So remove it they did—with its human freight plus the household goods and the cash reserve of the Hadji. And that is the last that has been heard or seen of the porters, wardrobe—and poor Hadji Arif's worldly possessions.

The Drop in the Value of the Turkish Lira.

Official circles, the banks and the trading community in general have been seriously preoccupied during the last few days with a phenomenon which the local Press, and Ministerial Departments even, will persist in referring to as the "rise of the Pound Sterling"—whereas, terminologically, the "drop in the value of the Lira" would be, technically at all events, more correct. It is the foreign exchanges as a whole, irrespective of their inter-fluctuations, which have been moving steadily upward on the local market during the past fortnight or so, and the unfortunate British pound is no more to blame for the present state of affairs than is the opulent American dollar. The Under-Secretary of the Treasury and the Secretary-General of the Chamber of Deputies arrived by express from Ankara this morning with the object of imposing certain measures which the local papers forecast as likely to be of a very drastic nature. Among these administrative correctives—as adumbrated by the local news-sheets—will be included prohibition of access to the "Bourse" of all foreign brokers and jobbers on the grounds that they are a pack of speculators mainly responsible for driving the Turkish Lira to 1,100 or thereabouts. As the few foreigners still operating on 'Change are for the most part Hellenic subjects, and as there is reported to be a long "waiting list" of potential Turkish brokers and bucket-shop owners, there would seem to be more underlying this contemplated measure than appears on the surface.

The downward tendency displayed by the Turkish currency—measured in terms of the foreign exchanges and the ratio of Turkish paper to Turkish gold—must unquestionably be attributed to economic causes and to the action of the inexorable law of supply and demand.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Whether the expulsion from the Bourse of a dozen foreign brokers will lead to any improvement in the situation is at least open to doubt.

There is certainly more common sense in the suggestion—always according to the dailies—that the Government are about to endeavour to curtail their purchases of foreign exchange, by buying less material abroad and manufacturing more at home. Any such decision, if drastically carried out, would obviously assist, within certain limits, in checking the decline in the value of the national currency, but steel-rolling mills and workshops capable of turning out locomotives, tenders, rails and fish-plates cannot unfortunately be improvised in a week or two. Apart from which, the provision of foreign exchange for the payment of coupons abroad seems to have escaped the attention of the local papers in any case.

The only communication issued by the Treasury to the Press has been to the effect that the rumours that Turkey, following the example of Greece a few years ago, intended to increase her resources by cutting her Treasury notes in half, were sheer nonsense, and that these rumours had obviously been put into circulation by unpatriotic individuals, whose primary object it was to embarrass the Government, whilst taking advantage of the generally unsettled and confused state of the market in order to slip in, slip out and make their little pile.

The "Trans-Taurus Express."

The Simplon-Orient Express is to be extended still further into Middle-Eastern regions in the near future by a tri-weekly express service, to be inaugurated on February 15, 1930, between Haidar-Pasha and Aleppo, whence a section of the train will proceed southwards with passengers for Cairo and another section to Nisibin with passengers for Baghdad.

The stretch between Nisibin and Kirkuk, for the present, will be covered by an express motor-bus service, passengers re-entraining at Kirkuk for Baghdad. These express trains will be made up at Haidar-Pasha of first, second and third-class corridor carriages, sleepers and dining cars.

The train will be given the name of the "Trans-Taurus Express," once the contemplated train-ferry service between Sirkeji and Haidar-Pasha stations has become an accomplished fact, which, it is anticipated, will be the case sometimes during 1930. It will then be unnecessary for the passenger from London to leave his compartment between Calais and Nisibin.

The journey from London to Baghdad, by the extended Simplon-Orient route, to be inaugurated on February 15 next, will occupy exactly seven days.

Athens University, which had been closed owing to student riots, was reopened on December 13.

A new forest to be planted in Palestine will be named after President Masaryk in honour of his 80th birthday.

MM. Bouroff and Moloff, Bulgarian Foreign Minister and Finance Minister respectively, who arrived in Rome last week, on December 11 visited Signor Grandi, Italian Foreign Minister, and Signor Mussolini.

Two of a party of ten students who raided the Grand Orient Lodge of the Freemasons in Strada Lipsani, Bucharest, and demanded the archives of the organisation at the point of the revolver, were subsequently arrested by the police, but the others escaped.

M. Zaimis was on December 14 elected President of the Greek Republic, in succession to Admiral Kondouriotis. M. Zaimis received 257 votes, as against the 22 secured by M. Kaphandaris, the former Minister of Finance, who came next on the list. The election was made by Chamber and Senate, sitting jointly.

A delegation of Bulgarian Deputies from the Sobranie was received by King Boris on December 12 and presented to him a reply to the Speech from the Throne. During the reception which followed the King conversed with individual party leaders on the needs of the nation. All the Opposition leaders, by previous agreement, placed before the King their demand for a change of Government.

THE ARABS AND PALESTINE.

Under the auspices of the National League, a meeting was arranged, on December 12, in a Committee Room of the House of Commons, to hear the Arab case in regard to the problem of Palestine. Lord Strathclyde presided, and among those who accepted invitations to be present were:—

The Earl of Denbigh, the Earl Howe, Viscount Brentford, Viscount Templetown, Viscount Exmouth, Lord Lamington, Lord Ernest Hamilton, Lord Armstrong, Lord Sydenham, Lord Leigh, Lord Boston, Lady Strathclyde, Miss Margaret Farquharson, the Hon. Lady Bailey, Rosita Forbes, the Hon. Joan Grant of Grant, Major-General Sir Alfred Knox, Brig.-Gen. Sir George Cockrill, Col. the Rt. Hon. John Gretton, Lt.-Col. C. K. Howard-Bury, Rear-Admiral Beamish, Sir Stewart Sandeman, John Remer, Esq., Brig.-Gen. Sir Henry Page-Croft, the Rev. Prebendary Gough, Patrick J. Hannon, Esq., Lt.-Col. the Hon. Cuthbert James, William John Stewart, Esq., Lt.-Col. F. E. Fremantle, P. J. Pybus, Esq., Major Kindersley, Sir Cooper Rawson, Major Sir Archibald Sinclair, Bt., Ben Smith, Esq., George Balfour, Esq., J. A. Tinne, Esq., Lt.-Col. Sir William Wayland, Lt.-Col. the Rt. Hon. Sir John Gilmour, Sir Bartle Frere, Captain E. N. Bennett, T. D. Cree, Esq., and others.

The principal speaker was Jamal Beg al Husaini, Secretary of the Supreme Muslim Council, who, after contrasting the condition of the Arabs in Palestine in pre-War and post-War times, pleaded that the British people, in upholding the rights of minorities, should not forget the rights of the majority in Palestine. The Arabs' demands, he said, were not grotesque: all that was wanted was British fair play and a national democratic Government in which all sections of the community in Palestine should be represented according to their numbers.

Colonel Howard Bury, in suggesting the formation of a group in the House of Commons to watch the problem of Palestine, and to see that the interests of the Arabs were not overlooked, expressed his belief that a solution was possible within the framework of the Balfour Declaration, that whereas up till now it had been the first part of that Declaration—political Zionism—which had been stressed, it was time for the second part—the preservation of the rights of the existing population—to be observed. The Jews in Palestine might be allowed a cultural Home at the same time as the Arabs were given their rights.

Lord Sydenham, after recounting the efforts in the past of the House of Lords to get justice done in the matter of Palestine, declared his hope that the right cause would yet triumph.

NEWS IN BRIEF.

The law relating to the status of the Jewish community in Yugoslavia and recognising full freedom of worship received the Royal Assent on December 15.

M. Predavetz, one of the leaders of the Croat Peasant Party, was arrested on December 10. A Government *communiqué* states that he is alleged to have falsified the books of the bank with which he was connected.

In a speech given on December 13 at Ankara in the Turkish National Assembly on the revalorisation of Turkish currency, Ismet Pasha spoke of measures aimed at securing preference for native products, and said that in this connexion the chief rôle fell to the Turkish woman, who should dress only in home-made materials and adorn herself with the mountain flowers of Anatolia.

The newly appointed British High Commissioner for Iraq, Sir Francis Henry Humphrys, with Lady Humphrys and a daughter, arrived in Baghdad on December 10. The party flew across the desert from Palestine in two troop-carrying aeroplanes, being escorted on the last stage of the journey by six smaller machines. The Amir Ghazi, the Crown Prince, welcomed Sir Francis on behalf of King Faisal at the aerodrome.

The reform of the Turkish alphabet by decree of Mustapha Kemal Pasha has resulted in the re-engraving of the contemporary postage stamps of that country and the addition of Latin inscriptions which read "Turkiye Cumhuriyeti-Posta." The design showing a train crossing the railway bridge over the Kizil-Irmak River, on the Ankara line, which was formerly reserved for the postage due stamps, has now been adapted to the lower values of the regular postage series, stamps of 2 kurus grey and 3 kr. puce having already been issued in this type, while that of 6 kr. deep violet retains the legendary figure of Boscourt and his wolf.

The General Assemblies of the three Sokol organisations, Serb, Yugoslav, and Croat, were held on December 15. The Serb and Yugoslav Sokols met in Belgrade, and the Croat Sokol in Zagreb. The Serb Sokol unanimously agreed to enter as a whole the newly formed Yugoslav State Sokol organisation. The Yugoslav Sokol, after discussion, decided to enter by a vote of 90 against 11. The Croat Sokol met in a hall crowded with Deputies and the public. A motion was carried expressing the unwillingness of the Croat Sokol to join the new organisation and calling on all Croat Sokols to dissolve themselves and their branches in the shortest possible time.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 28.

Indian Central Committee.

The Report of the Indian Central Committee co-operating with the Statutory Commission is now in the Viceroy's hands, and arrangements are being made for its publication, simultaneously in India and England. Whether it will have been published or not before this letter is in the hands of your readers, one cannot know. In the former event, there would be little profit in my reporting the "intelligent anticipations" of it that are going the rounds in India. In the other case, there would be little profit also. Accordingly, I will devote my letter to a further examination of the accepted view of India; the view that must be sound, if, should sweeping changes in the constitution be agreed to, they are not to be followed by disaster. It appears more and more likely but the last word is with Sir John Simon and his colleagues—that the Round Table Conference may at least begin in an air of expectation of sweeping changes. I have in mind such changes as the Central Committee is "intelligently anticipated" to have recommended; as, for instance, that there should be, all round and complete provincial autonomy; that there should be, presumably not in a day, complete Indianisation of the army; that the *personnel* of the Viceroy's Executive Council should be drawn from the elected representatives in the Indian Legislature. That would mean that the Finance Member, among the other members, might be one of our Pandits. Truly very sweeping changes.

India's Unpreparedness.

The question is, how badly, if such sweeping changes are made, might India be governed from, say, 1932 until the date when order and good government were forcibly restored? The opinion is widely held among the English in India, be it here said, that a large measure of power will be given soon to the Indian electorate and its representatives; that from inexperience and lack of training more than from anything else a bad, a worse, and the worst use of that power will be made, and that finally the country will have to be restored to order and stable government by force. My own hope is that more prudent counsels will prevail in the immediate future, and that anything like a catastrophe, any time between the present day and, say, 1950, will be averted. That is my own hope: for I know how much less prepared by training and education India is than even men like Sir Philip Hartog are aware.

The Hartog Committee's Report.

To say another word of the Hartog Committee's Report. The concern of that Committee, I was informed by its Chairman himself, was felt to be chiefly with the state of primary education in India. Was that a right, even a necessary view? The Committee held that it was; for it is in the primary schools that the electorate will be taught. The fact is there need not be, and there ought not to be, for centuries the electorate that the Committee had in its mind. The franchise might for long enough be a very restricted one. What the Committee should have done was to examine the state of educatedness of that relatively small class to which political power must be given, if any is given at all. They should not, moreover, while considering only that class, have considered only the university courses, only the quality of the teaching in the colleges. The education that men like Lord Balfour, Lord Asquith, John Morley received, was given them partly in school and college, partly in their own libraries afterwards, partly in their commerce as mature men with the world at large.

An Englishman's Education.

Suppose that an Englishman after taking a good degree at Oxford or Cambridge, joins the staff of the *Spectator*.

He will have fair chances of educating himself to a point far beyond the point to which his University brought him; fair chances, not exceptionally great. He is therefore a fair example to take. If that man reads nothing, his society will ignore him. He will probably read widely, and, at times at least, he will read hard. A probability is that he will take up the study of some subject that he did not touch at school and college. He will probably learn to read French and German, should he not already be able to read in those languages. He will read French and German, translations of Russian books, and so on. He will be a member of a few societies; he will read their Transactions. In the end he will have received an education, one for which what he was taught in school and in college was merely the preparation. He will die a highly educated man.

An Indian's Education.

Of the education beyond the college stage, of which the leading men and women in such countries as England, France, Germany and Italy receive so large a share—that education this country of India is almost totally without. The Indians move in a society that puts no pressure on them to read, no pressure whatever; of the few learned societies in the country the active members are almost all Europeans; hardly an Indian ever studies any subject, even an old one, after leaving college; there is no intellectual talk in the country, there is no stir of intellectual life; society gossips and relaxes on every side. Men are lawyers or doctors or magistrates; they do their professional work, and then rest or they play or they just idle. The air of the place is that of a new kind of Kindergarten. If one has oneself something of an intellectual nature to discuss, one discusses it in correspondence with confrères in Europe, or one saves it up till one's next furlough, or one puts it away with a sigh. Mr. Baldwin rightly made the point in the House of Commons, that while the branch of the Aryan race from which the English are derived, was trained in politics, the Indian branch gave itself up to meditation. A further point to make is that it has ceased to meditate on anything living; it now just dreams.

The Danger.

The danger of giving a large measure of power to such men all at once is enormous. There is great danger, further, that it will be given; for the men in India, the Europeans, with something in their minds to compare the public life of the Indians with, are not to be counted even in fives. There is one here and there is another there; they live unknown, never heard of. I conceive myself as fully justified in passing over our news for a few weeks (not that I have not mentioned everything really striking), while I do the little I can to present a truer picture of India than such documents as the Reports of the Central Committee and the Hartog Committee imply. One doubts if even Sir John Simon, far clearer-sighted man than Sir Philip Hartog though he be, can have taken in the intellectual poverty of India, the country's resemblance to a new kind of Kindergarten.

The Maharaja of Patiala.

The Maharaja of Patiala has made a speech on the occasion of his birthday, and his was followed by a speech from one, Col. Haksar, whose services have been, or were, lent by the Gwalior Darbar to the Chamber of Princes. These two carefully prepared speeches were obviously addressed to the Statutory Commission and the British Indian political leaders more than to those assembled in the Rajendra Gymkhana Club. They will repay study. Like most public utterances, they are not so well-meaning as well-seeming. There is a way of saying a thing that a politician will make use of. Suppose you wish to convey to the Indian leaders that they should be prepared to modify their demands, because the Indian Princes are willing, should the British Crown restore lost rights to them, to help the British Government to put the brake on, you might say something like this:

"To those who feel justified in distrusting our association (i.e., the association of the Indian States in the Round Table Conference) I would merely say that the Princes were never willing . . . to submit to being employed as tools . . . to retard the progress towards the destined goal of their brethren outside their own territories." To say they are not prepared is to say so; it is also to put into men's minds that in certain circumstances they might be ready to be something very like prepared. One's belief is that they will be. One's hope is that too. The British Indian danger will be best averted—the danger of going far too far now—if the States help us to avert it.

THE POSITION OF THE LIBERAL PARTY IN INDIAN POLITICS.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

[The article from which the following extract is taken was written before the Viceroy's recent declaration. Sir Phiroze Sethna, who is well-known to readers of THE NEAR EAST AND INDIA as a forceful and able exponent of Indian political and Constitutional questions, has since been invited to preside at the forthcoming annual Conference of the National Liberal Federation, which meets next week at Madras.]

The curtain is about to rise upon a new scene in the Indian drama, and the greatest interest and the most lively feelings naturally reign all round as regards the developments that are imminent. The relations between England and India have now reached a stage when the greatest care must be taken to acquire a full and correct idea of the various conditions and aspects of the Indian political and constitutional problem, to envisage it as a whole in its proper perspective, with absolute freedom from prejudice and with the single object of promoting the welfare and progress of the Indian people and winning their willing and active consent and support for the connexion which the course of history has, in the inscrutable dispensation of Providence, established between the two countries. The responsibility of the British Government and Parliament for the welfare and advancement of the Indian people is often stressed, in fact, it seems to have become a truism, a sort of a first principle with British statesmen, politicians and publicists here, and of British administrators in India.

I shall not quarrel with this recognition of responsibility, for it connotes a moral attitude towards India and her people. Unfortunately it is not equally recognised that this sense of responsibility, if genuine and active, involves duties which can be rightly performed only by getting within the skins of the Indian people, by a thorough understanding and appreciation of their aspirations and view-points, by doing nothing that may alienate their good will and co-operation, and by recognising a sound political principle which history invariably teaches, viz., that it is not enough to do a right thing but it must be done at the right moment, otherwise developments and complications take place which cause much avoidable strife and suffering and the end of which it becomes difficult, if not impossible, to foresee or to guide.

The political situation in India to-day presents a varied picture of various currents and undercurrents of thought, and of divergent movements, national, communal, extremist, moderate, centrifugal, centripetal, labourite, agrarian, revolutionary, communist. All communities, classes and sections of the people are astir and giving expression to their aspirations, wishes and feelings. Time was when the peasantry of India was dumb and mute, but this state of things exists no longer and a change is, slowly but surely, coming over it also. The Montagu-Chelmsford Reforms are having their effects. In their historic report on Indian Constitutional Reforms, Lord Chelmsford and the late Mr. Montagu said:—

We believe profoundly that the time has now come when the

sheltered existence which we have given India cannot be prolonged without damage to her national life, that we have a richer gift for people than any that we have bestowed on them, that nationhood within the Empire represents something better than anything India has hitherto attained, that the placid, pathetic contentment of the masses is not the soil on which such Indian nationhood will grow, and that in deliberately disturbing it we are working for her highest good.

It is literally and absolutely true that "the placid, pathetic contentment of the masses has been disturbed." The non-Brahmin movement in Bombay and Madras, the movement among the depressed classes, the exercise of the franchise, the three last triennial elections, the general effects of the reformed Constitution which brought to the forefront several questions affecting the interests of the agricultural population, all this has led to the awakening of the masses, which in India include a large proportion of the agricultural population. Recently the peasantry in the Deccan in the Bombay Presidency has proved its awakening by successfully resisting a legislative measure and by carrying on a powerful agitation against increase of land revenue assessments. It would be sheer, criminal blindness to delude oneself with the belief that these mass movements among the agricultural classes are not spontaneous but engineered by political agitators. Political agitators, however astute and powerful, cannot mislead or deceive the peasant classes, with their deep inherited patience and sturdy common sense, in this manner for any length of time. The awakening of the Indian masses is a factor in the Indian political situation, which has got to be realised and keenly borne in mind. Otherwise the Indian problem cannot be viewed and solved as a whole rightly. British rule is producing its full effects, the whole of India is awake and pulsating with new life.

It was a favourite saying of Lord Morley that Modern India presented levels of culture and civilisation ranging between the 12th and the 20th century. That dictum, though liable to be abused in practical application, was not destitute of profound truth. In the same way, the political situation in India may be aptly described as embodying within itself most British movements of political thought from mid-Victorian Liberalism to Socialism and Communism. Every political fad of European origin is having its repercussions and its adherents in India. The only Continental movement which has not yet had its counterpart in India is Fascism. There are Youth Leagues which have recently sprung into existence, but none with the ideals or on the lines of Fascism. The Moderates, or the Liberals, still continue to represent the Liberal thought of Great Britain. They have a firm faith in democracy both political and social, and in all the implications of democracy; their methods are strictly constitutional; many of them have had considerable experience as administrators, and they fully realise that though good government is no substitute for self-government, government, no less than self-government, is essential to the welfare, happiness and advancement of the mass of people. They, therefore, believe in efficiency of administration like the bureaucrats, but unlike the bureaucrats, it is not the only thing in which they believe, but their faith in efficiency goes hand in hand with their faith in self-government. Those who think that the two are really incompatible may smile at this contradictory creed, but the best self-governing nation in the world has shown both in war and peace that the two are not really incompatible, and if such incompatibility is to be assumed or regarded as an established fact, the efficiency which the Moderates or Liberals believe in, would of course mean such efficiency as is consistent with and feasible under self-government. Be that as it may, the Indian Liberals are fully alive to the necessity of efficiency of administration. Another mark of the Liberal school of thought which differentiates it from the extreme movements is that it clearly, unequivocally and firmly stands for the maintenance of the British connexion and for Dominion Status, it does not wish to abandon its well

considered and deliberate ideal of Dominion Status and be carried away by the will-o'-the-wisp of national independence free from the British connexion. Believing as it does in the philosophy of Liberalism in the West enshrined in the teachings of thinkers like Mill, Spencer, Morley, the aim of the Liberal movement or Party is to establish in India a genuine system of democratic responsible government, as a member of the British Commonwealth of Nations, at the same time profiting by the experience of the working of democratic self-government in Great Britain to the countries in the Western world.

OUR GREAT INDIAN MARKET.

At a luncheon held under the auspices of the Royal Empire Society on December 11, Mr. T. M. Ainscough, H.M. Senior Trade Commissioner in India and Ceylon, gave an interesting address on "Our Great Indian Market." Sir John Sandeman Allan, M.P., presided. Mr. Ainscough said that the subject of his address needed no introduction to a meeting held under the auspices of the Royal Empire Society and in the heart of the City of London, whose bankers and merchants, since the days of the foundation of the East India Company in Queen Elizabeth's reign, had been the pioneers of economic development in India.

After stressing the importance to the United Kingdom of the greatest market for British manufactures, Mr. Ainscough said that it was a matter for the gravest concern that the United Kingdom's share of India's total imports had declined from 63 per cent. pre-War to under 45 per cent. in 1928-29. During the last six years our proportion had fallen by 13 per cent., and in the figures just received for the first six months of the current fiscal year, the British figure stood at 43 per cent. The primary reasons for this decline were:—(1) India's increased imports of certain foodstuffs and raw materials which are not produced in this country; (2) the temporarily reduced demand for certain British specialities, such as textile machinery, railway stores and cotton textiles; (3) the non-adjustment of the Indian market to the higher post-War level of prices of imported goods, and particularly of the high-grade British productions, the price of which has risen in greater proportion than most goods owing to our heavy overhead charges and increased labour costs; and (4) the menace of foreign competition now felt in almost every trade, including those which before the War were almost exclusively British.

The "bazaar trades," forming some 60 per cent. of the total, accounted for almost the whole of the trade which had been lost. Here low price and showy appearance were greater desiderata than quality, durability or even value of money. Owing to the great increase in the cost of production in the United Kingdom since the War, British prices were frequently beyond the purchasing power of the Indian masses and our merchants were being undersold by the Continent and Japan, in many cases by as great a discrepancy as 10 per cent. The importance of the price factor was illustrated by the remarkable success which had attended the activities of the Japanese with cotton piece-goods. The problem to be solved was a production problem rather than one of marketing. Our foreign competitors did not employ any more novel or more efficient methods of distribution than our merchants, who had the advantage of being established for decades. The remedy lay in those schemes of rationalisation which were now being tried out among the manufacturers in this country, which, it was hoped, would enable us to reduce our prices to a competitive level.

Dealing with the "heavy" trades, which represented approximately a further 30 per cent. of the aggregate British proportion, Mr. Ainscough stated that the British position rested on a much firmer basis. British standard steel, rolled to the British standard specification, had an established reputation throughout the country, and although the production of the Indian Steel Works under

the cover of a protective tariff was likely to increase, the demands in India for railway public works, building and general industrial requirements would be so great that the market for British steel would continue to expand *pari passu* with the general development of the country.

One of the most striking features of recent years was the increasing association of Indians in the import trade. There had always been an immense Indian vested interest in the distribution of imported goods in India itself. Of recent years, however, Indian importers were developing direct connexions with British and foreign suppliers in almost every direction and were visiting Europe in greater numbers. This was a perfectly natural development and was one in which the British exporter had always been prepared to co-operate to the fullest extent. We had seen and welcomed the recent inauguration of an Indian Chamber of Commerce in London.

During the past few weeks, largely through the efforts of Sir Stephen Demetriadi, of the London Chamber of Commerce, two Indian merchants had been elected as members of the Baltic Exchange. Developments of this kind, which brought the traders of the two countries into more intimate contact, were all to the good. Fortunately economic relations were not trammelled by any considerations of race or creed or caste. Trade was a great solvent and a great binding element between the parts of this great Empire.

In conclusion, Mr. Ainscough stated that during his recent tour of the industrial centres in this country, misgivings had been expressed as to the reactions of political agitation on our trade in India. During the period of transition in the development of self-governing institutions in India, it was only natural that considerable political feeling should be engendered from time to time against the governing power. Such an outburst occurred from 1919 to 1922 and certainly accentuated the slump which occurred in those years. It must also be conceded that the racial feeling which exists among large numbers of the younger generation of Indians, particularly in Bengal, had probably had some effect on our sales of piece-goods in recent years. It should be realised, however, that, in Indian commercial circles, there is very little sentiment of any kind shown in the transaction of business. Price was the controlling factor. It was doubtful whether our foreign competitors had scored from anti-British political feeling to any material extent. That feeling had probably been of assistance in strengthening their connexion in the market, particularly in the case of Germany since the War, but the business they had secured had, in most instances, been obtained owing to lower quotations or other solid advantages to the buyer.

The attention which had been given to Indian political affairs in recent years had tended to obscure the great work which had been carried out by the Government of India under the able direction of Sir Basil Blackett, the Finance Member, in placing Indian finances on a sound basis and in establishing her credit both internal and external. Thanks to a period of recurring good monsoons with resulting surplus budgets, it had been possible to remit the whole of the provincial contributions to the Central Government and so release provincial funds for local development purposes. Considerable remission of taxation had been made. The unproductive debt had been steadily reduced. In the railways and irrigation projects India possessed two wonderful investments which should show increasing returns and a growing contribution to the relief of taxation. In brief, India stood to-day on a firmer economic basis than she had ever done.

Earl Russell, Parliamentary Under-Secretary of State for India, has appointed Mr. E. P. Donaldson to be his Private Secretary.

The Salvation Army has recently opened in its Bapatla Leprosy Colony a new ward, erected at a cost of 4,000 rupees, through the generosity of Mr. G. E. Baxter of New Zealand.

An additional Men's Industrial Home in Colombo, Ceylon, was recently opened by His Excellency the Governor of Ceylon. Hearing that a drum and Salvation Army flag were needed, the Governor immediately expressed his desire to present both these to the Home.

THE WEEK AT HOME

London, Tuesday Morning.

A Hard-Worked Parliament.

One of the inevitable consequences of the peculiar formation of the present Parliament is that the House of Commons will have to sit until Christmas Eve. There is no question that the House has been worked hard, though little harm is done by that. An Administration that is never certain of its majority necessarily has to devote much time to the considerations of private members, and the fact that Wednesday and Fridays have been devoted to discussions rather than to action has inevitably meant the prolonging of the session.

But the public, as I have indicated before in this column, is by no means opposed to this ventilation of private members' feelings. It has been too long used to Government's crushing all private initiative, and to the individual's passive submission. The spectacle of a House, instead of a Government, legislating is regarded, indeed, as a heartening one, and it might be no bad thing for England, if she were to have a series of minority Governments, which imply the redrafting or withdrawal of certain legislative schemes when it is proved that considerable opposition exists to them. That all parts of the House should be taken into consideration is, many feel, the ideal of Government, though naturally the apostles of swift efficiency chafe at the delays and the collaboration involved. One has to add the proviso that this democratic doctrine is tenable only when the main business of governance is adequately performed by a permanent bureaucracy.

The Virtues of Oxford.

The events of last week have put an end, let us hope, to the ridiculous legend that was springing up, in the minds of those who knew neither Oxford nor Cambridge, that Oxford was decadent. In the popular judgment, the rise or decline of a University is evident in the athletic sphere (and we all more or less belong to the people). The victory of the Dark Blues on December 10 at Rugby was, therefore, hailed as the turn of the tide.

It is true that Cambridge had bad luck in having to field a scratch side, and it may be true that the absence of Bowcott and Heywood meant nothing less than the failure of Cambridge to put up a "record" of five successive wins, but in any case Oxford thoroughly deserved their win by nine points to nothing on the day. Oxford, more-

over, quite deserved their draw at Soccer two days after the Rugger match; and at least they can plead bad luck in the matter of absentees in the Cross-Country on Saturday, which Cambridge won by 21 points to 34.

The real differences between Oxford and Cambridge are differences of kind, not of degree, and I should think that there would be fairly general agreement on the list of distinctive merits which Sir Michael Sadler of Oxford, has just made. He says that Cambridge is leading in: "Physics (with Mathematics), Economics, Theology, Mechanical Engineering, Agriculture as applied to breeding of cereals and of stocks, and Art"; and that Oxford is leading in "The 'Greats' tradition—an infection of living philosophy, but very weak in modern psychology owing to stupid prejudice, Political Science, especially on the African problem, Jurisprudence, Agricultural Machinery, Agriculture, on the side of costings and social repercussions, Medicine with the ancillary Sciences, Classical, Mediterranean, and Tigradic Archæology, together with Pre-History, and Forestry."

Christmas Shopping.

Belonging to what I believe is a vast band of people on whom no ideas for presents descend until a week before Christmas, I am unable at first hand to tell what sorts of things are being bought for Christmas presents this year. For weeks, of course, the shops have been gay and alluring to all but the strongest minded, but of their interiors only Scots people and other prudent folk can really tell.

It is from some of these last that I glean the fact that the really new things in the way of presents are mainly a return to the old. First, apparently, in marvelous popularity is the Victorian work-basket—a feature which, one had thought, had disappeared for ever from our modern and labour-saving homes. And, it seems, there is a demand for pin-cushions.

As for the rest (of course one learns this from female sources), presents are being made in the form of artificial flowers (may they not be given to me!), decorative vases and bowls, scarves and handbags of the same material, leather handbags that hold a collapsible umbrella, peccary hogskin gloves, and so on. It is all great fun—a tremendously fatiguing business buying presents, but very pleasant giving them. Even in Scotland, I am told, the warmth of humanity at Christmas time is gradually penetrating those fascinating barbarians who postpone good cheer until New Year's Day.

Serious Jazz.

It is not often that the best musical critics are in agreement over a new work, and the kind of appreciation which a work in the jazz idiom that was performed by the Hallé Orchestra in London last week aroused is sure proof that something original and worthy has at last been supplied by a young English composer. I can write only of what I have read and "heard tell," but it will be surprising if Mr. Constant Lambert, the composer of this "Rio Grande" of which everyone is talking, does not make considerable stir in the musical world.

Mr. Lambert is but twenty-four years of age, and does not, therefore, come to jazz with the prejudice of older musicians. His work is a setting of a poem by Sacheverell Sitwell—which fact, again, might be thought to prejudice a good many people. He has set it for small choir, strings, brass, percussion, and pianoforte, and, apparently, has taken the idiom of jazz and made music of it. Let no one think this impossible. In all the arts as pursued by young men there is a certain element which can be called "jazz": to the new generation it often comes as a natural form of expression. And, of course, forms of expression matter nothing at all so long as the content be satisfying. Reports of this "Rio Grande" have made me eager to hear it—as, I imagine, everyone will be eager who does not think, for instance, that musical inspiration in England stopped with Elgar and Holst, or poetical expression with Housman or Bridges.

PERSONAL AND GENERAL

TO-DAY

December 19, 1929 (New Style).

December 6, 1929 (Old Style).

Rajab 17, 1345 A.H., of the Muslim Calendar.

Kislev 17, 5690, of the Jewish Calendar.

Prince Habib Lotfallah left Claridge's Hotel last week for the Continent.

Viscount Dunedin will leave London on December 21 for Palestine. Viscountess Dunedin will leave later.

Hassan Mazloun Pasha has resigned the post of Postmaster-General in Egypt, which he has held for several years.

Lord and Lady Stanley left London on December 12 to join the Ranpura at Marseilles on their way to Bombay.

The Bishop of Norwich and Mrs. Bertram Pollock left for Jerusalem on December 16. They will be away for about a month.

The Duke of Sutherland left London on December 12 to join the Ranpura at Marseilles on his way to India. He was joined by the Duchess of Sutherland in Paris.

Mr. A. N. Williamson-Napier left Port Said at the beginning of this month for Suez, where he has been appointed H.B.M.'s Vice-Consul.

Professor L. F. Rushbrooke Williams gave an address at the Constitutional Club on December 17, on "The Imperial Importance of the Indian States."

M. Charles Baehler, Managing Director of the Egyptian Hotels, Ltd., has had conferred on him by H.M. the King of Italy, the rank of Grand Officer of the Crown of Italy.

Mr. Henry A. W. Beck, the new American Vice-Consul at Alexandria, arrived in Egypt on December 7, to take up his new post and is acting as Consul until the arrival of Mr. H. E. Russell, the new Consul.

Lt.-General Sir George MacMunn lectured on "Afghanistan," yesterday (December 18), at the Imperial Institute, under the direction of the Church of England Council of Empire Settlement.

Among those who left London on December 12 to join the P. and O. s.s. Ranpura at Marseilles were Sir Arthur and Lady Downes and Sir Alexander and Lady Bicket, for Port Said, and Sir Archibald and Lady Birkmyre, for Bombay.

Field-Marshal Viscount Allenby and Viscountess Allenby left 24, Wetherby Gardens on December 13 for Marseilles, where they joined the P. and O. s.s. Ranpura for India. They will be away until the beginning of March.

The Viscount Goschen was received in audience by the King at Buckingham Palace on, December 11, upon relinquishing his appointment as Governor of Madras. The Viscount and Viscountess Goschen subsequently had the honour of being invited to luncheon with their Majesties.

The King has approved the appointment of Mr. Richard Sims Donkin Rankine, C.M.G., Chief Secretary to the Government of Uganda, to be British Resident for the Zanzibar Protectorate in succession to Sir Alfred C. Hollis, K.C.M.G., C.B.E., whose appointment as Governor and Commander-in-Chief of Trinidad and Tobago was recently announced.

Mr. Nevile Henderson, the new British Minister to Yugoslavia, presented his Letters of Credence to King Alexander on December 14.

Sir Basil and Lady Clarke left London on December 12 to spend Christmas in Egypt.

The Maharaja of Jaipur was received by the King at Buckingham Palace on December 12, and later in the day the Prince of Wales received the Maharaja at St. James's Palace.

KING ALEXANDER OF YUGOSLAVIA.

This year's anniversary of the birth of King Alexander (which falls on the day when this issue of THE NEAR EAST AND INDIA is being printed) was to be celebrated with special ceremony throughout Yugoslavia. As a personal tribute to the Sovereign it has been arranged that deputations from all parts of the Kingdom shall proceed to Belgrade to tender homage and present the congratulations of the people to his Majesty. The actual reception of these numerous deputations is expected to occupy a whole month. The first to be received was to be representative of the two Croatian Banats, Save and Maritime, and was expected to comprise five hundred members.

On December 17, the Yugoslav Minister in London, M. Juritch, gave a Reception at the Legation, 195, Queen's Gate, in honour of the King's Birthday.

Book Reviews

ALBANIA.

"ALBANIA: THE RISE OF A KINGDOM." By J. Swire. (London: Williams and Norgate, Ltd., 30s.)

In compiling a chronological compendium on Albania Mr. J. Swire has laid the future historian of the country under an obligation, for he has devoted much painstaking research to his task. It is not claimed for the book that it attains the standard of a history, for the reason that little or no attempt is made to apportion the relative values to be attached to the different authorities quoted. Rather has it been the purpose of the author, as the outcome—as the reader can well believe—of four years' unremitting labour, to present a "comprehensive account of the vicissitudes through which the Albanians have passed during the last fifty years." A preliminary glance at the Bibliography at the end of the volume, in which Mr. Swire comments on the value of individual works to the student of Albanian history, not, as he is careful to point out, on "their intrinsic value," will lead the reader to expect a trenchant and lively analysis in the body of the book. Thus, from such a carefully balanced entry as "valuable, but superficial and occasionally inaccurate," we pass to "misleading," "interesting as an echo of Serbian propaganda, but otherwise quite worthless," "wholly misleading and exceptionally bad taste," to reach finally one work dismissed as "extremely foolish." From such an exordium (albeit at the end of the book) one is led to wish that the author had allowed his critical faculties to range over every piece of information that came before him with a view to appraising its historical worth before incorporating it in his narrative. Such, however, was not Mr. Swire's aim, which is "to provide material on which a true appreciation of the Albanian question may be based." The material is certainly there; possibly the future historian will consider that there is

indeed, too much of it, and will complain that it is the duty of the contemporary compiler to indicate the relative value of sources of information and to use his opportunities, which are unlikely to recur for subsequent generations, to sift the evidence before him.

Inevitably, records of our own times have to depend largely on the journalism of the day. Having regard, therefore, to human, particularly journalistic, frailty and to the difficulties under which a foreign correspondent may labour, the contemporary chronicler requires to be particularly careful in gauging the reliability of newspaper reports. In this connexion, it is, of course, obvious that in dealing with Balkan affairs extreme care has to be exercised. That a statement should be made, let us say, in a Yugoslav newspaper regarding Italy, or in an Italian newspaper regarding Yugoslavia does not necessarily establish it as an historical fact. That this is so will be equally well known to Mr. Swire and to his readers of to-day; but the fact may be overlooked a generation or two hence, and consequently an unfair measure of discrimination will have been imposed on the future historian, if unchecked or unappraised newspaper statements are embodied in a narrative as *ipso facto* historical data. A reviewer is bound to stress this point in regard to any book dealing with a Balkan country. For his work on Albania Mr. Swire has consulted a very large number of authorities and he has embodied their views and statements in his narrative. Some of them are notoriously partisan, and it stands to reason that, if X is known to be strongly anti-Y, his views on Y are not calculated to be of real historical value, unless they can be vouched for by an impartial authority. On the subject of Albania the verdict of history may endorse our author's findings, but more value would be set on his own judgment, if he had shown a disposition to weigh each piece of evidence that came his way, instead of slipping it into its position in a chronological review without attempting to analyse its historical value. As an example may be cited the references to the part played by Montenegro in 1915; our author accepts a view that has been strongly challenged, and it may be doubted whether his version has yet been established as the correct one. It would be wholly unfair to the book to apply to it, on this account, the tag: "*Ab uno disce omnes.*"

There are various drawbacks to a chronological survey such as the author has adopted in telling the history of Albania. In the first place, as he points out, it lends itself to the bringing up of "incidents which are better forgotten," or, it might be said, to the laying of undue emphasis on incidents which have little bearing on the course of history. In other words, the trees are allowed to obscure the wood. During the last decade or so both Italy and Yugoslavia have acted in regard to Albania in many ways in which they ought not to have acted. The contemplation of their crimes or shortcomings may be required as a preliminary to the setting up on earth of the Day of Judgment; but of itself does not do much to advance knowledge of the trend of contemporary affairs, whereas, viewed through a telescope, instead of through a microscope, they might be used with advantage to the uplift of Italy, Yugoslavia and Albania. A further drawback to the chronological survey is that it prevents any definite subject from being treated as a single whole. As an example in Mr. Swire's narrative we may take the Autocephalous Orthodox Church of Albania. This surely calls for a section to itself, or at least the telling of the story in consecutive paragraphs. Yet to learn about the Albanian Orthodox Church we have to turn, first to page 69:

It was not until 1923 that, in agreement with the Patriarch, an Autocephalous Church was established in Albania.

On page 398 it is stated:

A congress of representatives of the Orthodox congregations of Albania was held at Berat during August, at which it was decided

that an Autocephalous Albanian Church should be founded. A formal application was made thereupon to the Patriarch for his consent, which was readily given.

[The year is not stated, but nine pages earlier in the Chapter there is a reference to the spring of 1922.]

On page 470:

During the early summer of 1926 the Patriarch at Constantinople sent, at the instance of Greece, the Metropolitan of Trebizond, Monsignor Chrysanthemos, to Tirana, to adjust with the Albanian Government certain matters which had remained outstanding in connexion with the recognition of the autocephalous Albanian Orthodox Church. His mission proved entirely successful, and the outstanding points were settled to the satisfaction of all parties.

Finally, on page 517:

A further cause of friction with Greece was the pressure which that country had brought to bear to prevent the Patriarchate from regularising the position of the Albanian Orthodox Church created at the Congress of Berat in 1922. . . . To clear up matters in this connexion which remained outstanding, four Albanian Orthodox Bishops met at Tirana during May. [1928.]

Yet the real story of the Albanian Orthodox Church as both more interesting and more complicated, and, far from being recognised by the Œcumenical Patriarch, its prelates have been actually or virtually excommunicated, although that circumstance, may not interfere greatly with the Church's functions in Albania.

Mr. Swire's "Albania," it may be repeated, tells the story of that country with a wealth of chronological detail, and enables its readers to follow step by step Albania's gradual emergence from a mere "geographical expression," to a Kingdom with reasonable prospects of permanency and prosperity. In subsequent issues of a useful book, it would assist the reader to have the year dealt with in the text repeated on each page. The name of the King of Montenegro should be spelt Nicolas, not Nicholas, and the reference *passim* to the present King of the Albanians as Zogu, *tout court*, is a minor blemish, which is apt to receive undue emphasis in such sentences as: "Kryeziu was instructed by Zogu to inform M. Marin-kovitch," and "a cordial exchange of telegrams between Zogu and King Victor Emmanuel and Signor Mussolini also took place."

EGYPT PAST AND PRESENT.

"THE LAND OF THE SUN-GOD." By Hanna Rydh. Translated from the Swedish by Anna Barwell. Illustrated. (London: George Allen and Unwin, Ltd., 12s. 6d., net.)

Comparatively few people appreciate the pleasure and profit to be gained by a second visit to any locality. Is it not quite as valuable to deepen and correct our conceptions of a country or a place by repeating our visit once or twice, as to race about in our desire to see "everything"? I judge only from my own slight experience. After last year's visit to Egypt I must confess that my chief impression of its life of to-day was one of great backwardness, of indolence on the authorities' part as regarded the conditions of the people, and finally of that general desire to fleece the foreign traveller, which detracted from the pleasure of a stay in the Land of the Sun. A second visit, however, owing to the fact that I have got rid of certain of my first impressions, allows me to perceive much that gives me pleasure, since it enables me to do justice to several points in the national life that I have before misjudged. A renewed acquaintance with existing conditions—although this acquaintance I frankly confess is still far from intensive enough—has made it, moreover, possible for me to get away to a certain extent from the customary angle of vision and kept me from premature judgments based only on what is revealed by a first cursory glance. Thus it became easier, too, to set a higher value on the efforts that were being made, rather than on their first visible results.

The above quotation from one of her early pages truly summarises the spirit of this book, the author of which, Dr. Hanna Rydh, is, the publishers tell us, a noted archæologist. In this book she shows herself to be a great deal more; a fresh and acute observer, a sympathetic student of humanity, a lover of Nature and art, and an excellent writer. In her nineteen chapters, many of which are little essays on various aspects of her subject, she shows us the stock sights of Egypt with a light on them which makes us forget the staleness or affectation of the usual traveller's description; she tells us of visits to Badawin, Fellaheen and Egyptians of the upper classes; or gives us her thoughts on subjects important to the renewal of Egyptian nationality which would perhaps hardly have

occurred to the mere man. Her first chapter contains her thoughts, in Deir-el-Bahr, on Queen Hatsheput. The whole is supplemented by her eighty-six photographs, of which many are very good and all of which are well reproduced, though we could have done with more careful references to them in the text. It is a little disconcerting to be told of the Badawin's method of grinding coffee and to find oneself referred to a picture showing "the blind Muezzin on the roof of the village mosque" and to find the same reference given as illustrating the party going to bed!

The translation is, on the whole, quite competent, but we could have wished the "Translator's Notes" away. Most of them are quite unnecessary, and some are frankly unintelligible. For instance, it hardly helps the reader to be told, in such a note that "Piastre equals 2d.—6d." The publishers have given Dr. Rydh's book the dainty and artistic form which it deserves. C. S.-W.

CHRISTMAS CARDS.

Messrs. Raphael Tuck never fail in their enterprise in manufacturing means of conveying greetings at Christmas time. This year a most ingenious novelty comes from their House in the form of gramophone greetings recorded upon postcards. It is a medium which has not yet attained perfection, but the departure seems capable of interesting development. In addition, there are to be had from this House the usual calendars, picture books, paper serviettes, cards, and so on.

The New 'BP' from Crude to Car

The Happy Motorist

Here he is again, still happy because he is using the new "BP." He used it in the summer. He is using it in the winter. He will use it all the year round because, whatever the weather conditions, he knows that the new "BP" gives the best results. He gets an easy start on a cold morning because the new "BP" is specially volatile. He gets amazing acceleration because of the "pep." He gets extraordinary power, no pinking and wonderful hill-climbing. In fact, the new "BP" has put new life into his car.

His experience can be yours. Run your car on

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Exchange.

The measures taken by the Turkish Government to check the depreciation in the exchange have so far succeeded that the rate of the piastre has now improved to 1,030 for sterling. It is, however, one thing to support the exchange artificially and another to bring about a real and lasting improvement in the rate, and the difficulty the Ankara authorities have to face is that present conditions in Turkey provide no substantial support for the exchange. Incidentally, to judge by a cartoon in one of the Turkish papers, an entirely erroneous view seems to be taken of the exchange position. The cartoon depicts the piastre administering a severe check to the onward rush of sterling, but, of course, the value of sterling has not altered one atom; it is the piastre which has weakened in reflexion of the economic crisis in Turkey, and if the mistaken view with regard to sterling is really held in Turkey it is not going to make the solution of the exchange problem any easier.

The Roumanian Oil Position.

The problem of over production has come to the fore this year in regard to a number of commodities, such as grain, rubber, tea, and oil, and it is Roumania's misfortune that she is suffering from the low prices which have been ruling for the first and last of these products. The oil situation in Roumania continues to be serious, but despite the low prices the production continue to increase, and is now over 15,000 tons per day, the output for the first nine months of this year being 3,522,000 tons as against 3,097,000 tons for the corresponding period of 1928. In the prevailing circumstances it would seem sound policy to limit the production until the world market position improves. To increase production at the present time is not merely a wasteful policy, but can only result in intensifying the existing difficulties in the Roumanian oilfields.

Sudan Trade.

In the later months of the year the trade of the Sudan usually shows a marked tendency to slow down, and this year has been no exception. The latest figures available are for the nine months ended September 30, which show roughly the same increase on the year as in the previous month. The total trade via the Red Sea ports and Wadi Halfa amounted to £E11,257,601 as compared with £E10,109,900 for the corresponding period of the previous year, an increase of £E1,057,701. All items show increases with the exception of Government imports, which are £E49,572 down at £E1,437,810. Exports at £E6,124,248 show an increase of £E904,770 which is a tribute to the importance now attaching to the cotton crop, while public imports at £E3,179,915 show the very satisfactory increase of £E142,593 which points at once to the gradual improvement of the position in the Sudan

and to the possibilities of that country as a market in the future. To look for rapid developments in the Sudan would be absurd, but it is quite clear that under favourable conditions the way is now open for a period of steady progress which will see the prosperity of the Gezira spread more and more widely over the country.

The P. and O.'s Financial Strength.

As usual, the meeting of the P. and O. Company was notable for a most interesting address by Lord Inchcape, who covered a wide range of subjects in his comments. He began by dealing with the position of the P. and O., and showed that the company is in the happy position of having an immense surplus of assets over liabilities. As he justly pointed out, the extremely strong position of the company is the result of the cautious and conservative policy pursued by the Board over many years. Lord Inchcape went on to review the work of the whole organisation of the company. Last April the latest addition to the P. and O. fleet, the Viceroy of India, was placed in commission, and the Board are about to place an order for two 20,000 ton ships for the Australian trade, both of which, like the Viceroy of India, will have the turbo-electric drive and oil fuel. The question of the utilisation of pulverised fuel in cargo ships is being carefully considered, and it was stated that when the present experiments proved satisfactory the system might be introduced into passenger steamers as well for reasons of economy. Dealing with India, Lord Inchcape severely criticised the Indian Coastal Traffic Reservation Bill, and indicated the serious nature of the consequences that, in his opinion, might follow the passage of this measure. As regards the commercial outlook he was able to point to some improvement in the Indian trade, but conditions in China are preventing a revival in that country. Lord Inchcape takes a pessimistic view of the position as regards cargo steamers, describing it as probably never having been more gloomy, the trouble being that there is more tonnage in the world than is required. He thinks it probable that cargo tonnage will have to be laid up for the time being, owing to the unremunerative character of the freights obtainable.

 The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
 The Bank transacts every description of banking operations.

THE WEEK'S FINANCE.
(By Our Financial Expert.)

London, December 17.

Business in the Stock Markets has been on a much restricted scale, and the somewhat unexpected reduction in Bank Rate to 5 per cent., while it produced a firmer appearance in the gilt-edged market, failed to stimulate any real activity. Thursday's change in Bank Rate had not been anticipated by the money market in view of the approach of Christmas, and the consequent inevitable expansion in the currency and the general tightness of money, accentuated by payments for the new Conversion Loan. Gold movements and the arrangement for a shipment of nearly £4 millions in gold from New York to London, however, removed any justification for keeping Bank Rate at a level higher than was necessary to attract sufficient short money to London to replenish the gold losses of the year.

A certain amount of liquidation affected the industrial market, and the dullness was accentuated by the Royal Mail Steam Packet announcement and the publication of the British Cement Products report, to which further reference is made below.

Indian Loans.

The Bank of England is receiving tenders to-day for bills of from £1,000 to £10,000 to a total amount of £6,000,000 for a twelve month loan by the Government of India. The money is to be devoted to capital expenditure on railways. Sir George Schuster, the Finance Member of the Indian Government, in his Budget speech last April clearly indicated that his Government had no intention of curtailing their expenditure programme, which eventually included the purchase by the State of the Southern Punjab Railway. For this an issue of £6,000,000 of nine months bills was made in London in May at an average rate of £5 13s. per cent., a dear price for the Indian Government when compared with the £9,845,000 it borrowed in August 1928 at £4 8s. per cent. Meanwhile in the Stock Markets Indian Bonds have been at a low level. This was partly due to the expectation of a new long term issue, but this has now taken the form of the bills above mentioned. Indian Government securities have also been depressed by the political situation, but this, although charged with suppressed excitement, is evolving with calm and caution and whatever steps the Imperial and the Indian Governments may take will have a due regard for financial and commercial interests. With this outlook and the present loan issue position simplified, although there will most likely be another issue in the spring, Indian bonds may well be considered undervalued, and such securities as the 3½ per cent. stock yielding about £5 9s. per cent., the 4½ per loan yielding £5 10s per cent., or the shorter term 5½ per cent. loan (1923) giving a return of 6 per cent., and all of a full trustee rank, have their attractions.

Shipping Company Accounts.

The Pacific and Orient accounts recently published are fairly encouraging in view of the difficulties in the shipping industry. Freight and passenger earnings are higher than last year, and net revenue for the year amounted to £1,241,602 as against £1,224,267 for the previous twelve months, but this is not proportionate to the increased capital and net earnings are only 13.8 per cent. as against 15 per cent. of the capital last year. A 12 per cent. dividend, is, however, again paid. In view of the difficulties facing the shipping world mild satisfaction may also be found in the results of the Orient Steam Navigation Company. Profits, it is true are lower for the year ended June 30, than for the preceding year, being £391,832, a decrease of £28,916. This, however, enables 12½ per cent. tax free again to be paid on the Ordinary shares, and the remaining profits are conservatively distributed, and although some accounts receive a smaller allocation the carry forward at £99,023 is higher than the amount brought in which was £69,561. The newly modelled accounts show that of the total assets of the company amounting to £5,831,800 nearly one third are in the form of Government and other securities. Of particular interest is the official statement issued by the Royal Mail Steam Packet directors that no interim dividend is to be paid this year on either the ordinary or preference stock. The current profits are being conserved, it is stated, to meet the repayment of a Trade Facility Loan of £2,550,000 due in September, 1930.

Two Gloomy Groups.

Ominous rumours have been circulating regarding certain industrial groups of which the R.M.S.P. is one, and whether correct or not have resulted in a fall in the shares of all the companies in the groups. The R.M.S.P. controls about thirty shipping companies including the Argentine Navigation, Elder Dempster, Union Castle and the White Star Line. The depreciation has been severe during the year, the R.M.S.P. ordinary, for example, have dropped from 76s. to 30s. Half statements such as the Board have on more than one occasion made deceive no one, but only lead to further perplexity and lack of confidence. In a totally different industry a similar all round depreciation of share values has occurred, namely in the case of the Red Triangle group of which Mr. H. S. Horne, whose affairs are now being examined in the Bankruptcy Court, was until a few days ago the head. Here the rumours were obviously justified. The parent company, British Cements Products, which has just produced its accounts, has made a loss of £2,000,000 due almost entirely to share depreciation. As in the case of the R.M.S.P. so in the case of the Red Triangle Cement Group, the directors were pressed to give proper information to shareholders before the annual meeting, but with no avail. The company accounts of both groups have never been very lucid and the obscure holding of subsidiary and allied companies shares makes the balance-sheets often almost meaningless.

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under :—

1st Class throughout.	}	A. 10 days sea-passage & 18 days stay in Egypt...	L. Stg.: 72.10.
		B. 10 days sea-passage & 25 days stay in Egypt...	L. Stg.: 81.10.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell reports as follows from Galatz for the week ended December 7:—

Grain.—There is practically no change in the grain situation, as the slight improvement which set in last Wednesday was of such short duration that it hardly had any effect on our market. Very few shipments have therefore been effected, even to Rotterdam, which port attracted practically all the maize which was arriving at the shipping ports lately. A few transactions have also taken place for Hamburg, whilst Weser was rather neglected. Freight have, in consequence of the substantial reduction of spot tonnage, been maintained, and as much as 16s. 6d. to 16s. 9d. was paid for the Continent. At Constantza the situation is better, and 10s. 6d. and upwards has been obtained by spot steamers.

Timber.—No new chartering was done during the week, but loading continues in completion of old contracts. The sawmills have already practically suspended sending their timber to Galatz, as but few further steamers can be expected to arrive owing to the possible closing of navigation before they could complete loading their timber cargoes. An important business is expected during the coming winter from Constantza, the Government having established a specially reduced railway tariff for timber sent to that port between January 1 and March 31, 1930.

Weather and Crops.—The weather in general has continued to be overcast, mild, and misty, but there have been no precipitations except some slight scatterings of rain or snow in the northern parts of the country during the first few days of the week. Navigation was considerably impeded by fog during the mornings of the last few days. Yesterday the fog lasted here till midday, when it suddenly lifted and the rest of the day was bright, and although it is again cloudy to-day, there is no fog at Galatz. The temperature has not fallen below freezing point even at night, whilst during the daytime it has generally varied between 5 and 9 degrees Centigrade, reaching even 15 degrees in the shade during sunny intervals. Definite figures are not yet to hand regarding the extent of the autumn sowings. Some pessimistic reports have been circulated as to the area sown with wheat, but the usually well-informed *Argus* states that, according to figures collected by the Ministry of Agriculture, the area sown with wheat alone already exceeded 2,300,000 hectares on November 25, and the total now exceeds the 2,400,000 hectares sown last autumn. In some parts of Bessarabia, owing to lack of seed wheat as a result of the failure of last year's crop, the peasants have sown rye instead. Conditions continue to be excellent.

Sulina.—The bar depth remains unchanged at 24 feet.

Constantza.—This week about 10,000 tons of grain arrived from the interior, and owing to the large number of undischarged waggons blocking the station, the railway authorities have had to suspend the acceptance of grain for this destination. About 17,000 tons were shipped, mostly to Rotterdam/Hamburg/Weser. Nine vessels loaded about 28,000 tons petroleum products and two took oil fuel for bunkers.

Bulgarian Report.

Bourgas, November 30.—The grain market remained weak, but for beginning of December there are about 2,600/2,800 tons, mostly barley and maize, available at Varna and Bourgas for Antwerp/Rotterdam. The rates quoted are about 11s. per unit. Business to Mediterranean destinations is moving on a limited scale and only moderate quantities have been shipped. In general the weather during the week has been rainy and cold. Autumn sowings are reported to be in excellent condition.

The Eastern Telegraph Company, Ltd., announce the payment on January 15 next of a dividend at the rate of 3½ per cent. per annum, less income tax, on the Preference stock of the company for the quarter ending December 31, 1929.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S. W. 1.)

EGYPT.

Clothing, Sheets, Blankets, etc.—The Egyptian Department of Public Health invites tenders for the supply of clothes, bedding, and sundry piece-goods. January 30. (D.O.T.)

Cloth.—The Frontier Administration of the Egyptian Ministry of War and Marine invites tenders for the supply of various cloths for the making of uniforms. January 14. (D.O.T.)

Paper, etc.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper, inks, adhesives, stationery, and materials for Photo-Copying Office, required for the year 1930-1931. February 17.

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, sheets, woollen blankets, napkins, and textiles required for the year 1930-1931. January 30.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of 6,800 metric tons of asphalt for the Tanzim Department, Cairo. February 3. (D.O.T.)

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Luxor. The principal materials required are 10,850 metres of steel tubes of various sizes from 80 m.m. to 300 m.m. internal diameter, together with specials, 58 sluice valves, 15 hydrants, 7 column hydrants, and 6 drinking fountains. January 7. (D.O.T.)

INDIA.

Air Compressors, etc.—The Indian Stores Department invites tenders for the supply, delivery, and erection, etc., of two electrically-driven air compressors, capacity of 600 c. feet of free air per minute, two air receivers and switchboard, etc. January 13. (D.O.T.)

YUGOSLAVIA.

Tin.—H.M. Consul at Sarajevo reports that a local firm desire to receive offers from British firms for the supply of 5 tons of "Banka" or "Straits" tin. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Manchester, December 24; Birkenhead, December 24); s.s. Britannia for Bombay (Glasgow, December 30; Manchester, January 4; Birkenhead, January 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Glasgow, December 28; Birkenhead, January 9).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 27).

British India Line.—S.s. Warfield for Bombay (London, January 4); s.s. Morvada for Colombo, Madras, and Calcutta (London, December 28).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, January 16; Liverpool and Swansea, January 18); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 21); s.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 25).

P. and O. Line.—S.s. Novara for Calcutta (London, January 3); s.s. Morea for Bombay (London, January 3).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 21); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, nad Mersin (London, January 4).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, December 27; Glasgow, December 20; Liverpool, December 4); s.s. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 28); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 28; Swansea*, December 28); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 28; Swansea, January 2); s.s. Mardinian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 11; Swansea*, January 11). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

BRITANNIA ... Jan. 10 ... TUSCANIA ... Feb. 11
*ELYSIA ... Feb. 4 ... *CIRCASSIA ... Feb. 27
*Leave Marseilles January 18 and February 17.

*First class passengers only. Specially low fares. †Calls Port Sudan.
† First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL. Feb. 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

Engineering Topics

(By Our Engineering Correspondent)

Sewage Disposal Plants.

In districts where sewage disposal plants are under contemplation one of the chief considerations will be as to whether suitable materials for the trickling filters can be obtained locally. As a result of practical experience the following tentative conclusions as to the selecting and testing materials for the purpose may be given, and from them it will be evident that the matter is neither so simple nor of such slight importance as many suppose. In the first place the material for such filters must be sound, hard pieces, and neither friable nor liable to break under weight or frost. All three dimensions should be as alike as possible, and they must be clean and free from dust or fine material. A further point is that they should be as nearly as possible uniform in size and be of such a composition that they will stand up to their work and not break up into smaller pieces by superimposed pressure whilst wet. One of the chief recommendations is that when selecting local material for a given installation careful investigation of the various sources of supply should be made. Men engaged on this work must possess sound geological training, and their duty should be to obtain full particulars as to the facilities for obtaining adequate supplies, screening, grading, and cleaning the material and getting it to the site. A laboratory analysis should also be made of samples selected from various sources to determine the comparative merits of the several materials and their capabilities of standing up to their work during service conditions.

The whole matter was gone into thoroughly recently by an association of sewage engineers, and the conclusions arrived at were that the sodium sulphate soundness test, which is well known to all sewage disposal works' officials, is the most indicative test for predetermining the disintegrating qualities of the proposed materials. Other physical tests are designed towards the determination of specific gravity, absorption, and porosity, and although of great technical value, they need not be gone into here. Naturally, the report lays stress on the importance of chemical analysis in determining the effect of impurities, as earthy and organic materials, other foreign substances,

iron, and sulphur. It is also suggested that micro-structural analyses should be made where it is felt that their result might add to our knowledge. Emphasis is placed on the care that should be taken in obtaining the filter material from a selected and approved source, so as to ensure a uniform grade and size, free from all irregularities and impurities. There is ample evidence to show that improper screening for size and faulty cleaning of filter material for many of the existing trickling filter installations has had an influence which has been manifest in the rapid deterioration of the filter beds, perhaps even more than the matter of breaking down, or of the disintegration, of the individual pieces of filter materials. It seems evident that proper cleaning and grading of filter materials cannot be obtained without special arrangements for screening and re-screening and perhaps even washing the material either at the source of supply or at the filter plant itself before the filter builders commence their work.

Maintaining Machinery.

The maintenance of the plant and machinery of a manufacturing establishment is generally one of the duties of the works manager, and a good deal depends on his judgment in deciding upon and carrying out the necessary repairs and renewals from time to time, as and when necessary. It is, however, very unusual for him to have any concern with or knowledge of the money value of the plant he is dealing with, and it would seem that this state of things could be altered with advantage. I remember that Mr. J. E. Darbishire once suggested a system of working in connexion with plant and machinery maintenance, and in a large works where his proposals were given a thorough trial the results exceeded all expectations. The suggestion was made with the idea of ensuring proper attention to upkeep of machinery and plant, which, in a manufacturing establishment, will consist of boilers, producers, furnaces, steam or gas engines, electric power generators, transmission lines in the form of shafting, electric cables, steam pipes and the like, with possibly air compressing machinery, cranes, steam hammers, welding plants, precision and other tools, and so on. The quality of the works' output is absolutely dependent upon the quality and condition of the directly productive plant, but the quantity and cost of the output is dependent on the condition of the whole establishment. Under the system dealt with the control of everything was placed in the hands of the works manager. The limit of his powers, as regards expenditure, were defined by the general manager or the directors and he was held responsible for the upkeep of the whole of the machinery and plant. It was his duty to report his requirements when he found them to exceed the financial limit laid down for him, but he was given a good deal of latitude in incurring expenditure on repairs, because when these are needed they are usually needed quickly, and delay might add considerably to the cost, not only directly but indirectly.

As it was his duty to make provision for the proper care of all the machines and to execute all repairs as soon as they were necessary, he organised a system which worked admirably in practice. He made each attendant or workman in charge of a machine, by which is meant the actual operator and not a shop foreman or charge hand, directly responsible for its being maintained in the best possible condition. He made it the man's duty to report at once to his foreman, and through him to the works manager, any defect that became apparent, and he had to enter on a card the description and number of the machine, the nature of the defect, and the date it was first noticed and sign it. The foreman then had to inspect the card and either approve or disapprove of the repair being carried

out by either signing the card and forwarding it to the works manager, or marking it "Not necessary," signing it, and giving it back to the man. If it came through to the works manager he would inspect the machine, sanction the work or refer it back as the case might be, and, if the repair were to be carried out, give it a works order number. The repairs would then be carried out and inspected on completion by the works manager and certified on the job card, which would be priced out and sent to the accountant's department. It seems that in practice this system has ensured proper care by the workmen, and has prevented all ill-usage of machinery. The man and the shop foreman alike have felt a certain responsibility, and have also felt that they were being treated fairly, and it also gave the works manager the opportunity of deciding whether the time had or had not come for the machine to be replaced rather than repaired. The works manager had before him, when required, the stock card for each machine, and so could see at a glance what it had already cost for repairs and also how far the cost of renewal had been provided for. It seems that a similar system might be adopted with advantage in manufacturing establishments where other and older fashioned systems are in operation.

NEAR EAST MARKET REPORTS.

The December issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

During the period under review, the cotton market has experienced steadily declining prices, due to a lack of serious demand and to plentiful supplies. The weakness of American cotton quotations contributed to the fall, and prices were reduced to around 27 dollars for Sakel, November contracts, and 19 dollars for Uppers, December contracts, and at these levels the Egyptian Government declared itself a buyer. This measure caused a temporary recovery in prices of nearly 1 dollar, but a steady fall in American cotton led to this rise being lost. Although the Government has not been compelled to take delivery of any cotton, the market has been very dull. Sakellaridis has been in slightly better demand, but Uppers have been quite neglected, and, in consequence, premiums have declined. Crop estimates have crystallised around 8,000,000 kantars, which amount is thought to be sufficient for the world's needs. Trade demand is sporadic and is confined to immediate requirements, with the consequence that stocks are accumulating rapidly. Practically all buying and selling in the interior is at a standstill; holders are hoping for higher prices and buyers are unable to dispose of their supplies. Hedging has increased the weakness of the markets, as the offtake is poor. The quality of the present crop of Sakel is generally good, but the staple varies appreciably, owing to the fact that all the cotton was gathered together and no distinction was made between the bottom and top crops, with the result that the staple, in such cases, is very irregular. Both grade and staple of Uppers are good, and new varieties, such as Maarad, Fouadi, and Gezih 3 have given good results. Cotton seed has been very depressed and has shown a sagging tendency. Premiums for spot have declined and shipments have been poor. A plentiful olive crop and the promise of an abundant supply of linseed and other oleaginous seeds have led to a decline in oil quotations, while the fact that the autumn and early winter have been open has minimised the demand for cotton-seed cakes. Local crushers have not done as much business as last year and stocks are beginning to rise. Despite the weakness in raw cotton, the demand for cotton goods has been fair and the tone of the market has displayed great steadiness. The stock of Manchester goods is increasing slightly; business has been quiet, with no change in prices.

The demand for all varieties of flour has been satisfactory, but owing to the nervousness of the wheat market, quotations have been irregular and have declined. A gradual improvement has been shown in the market for sugar, and arrivals have been abundant. The demand for local consumption and export has been satisfactory. There has been a scarcity of spot supplies of imported rice and the market followed the decline of Rangoon. The demand for Egyptian rice has been good, but owing to an abundant crop, prices have ruled easy. Gunnies have been unusually quiet; a fall in quotations failed

to attract buyers and stocks are increasing. More interest has been displayed in cabots, and although transactions have been frequent, prices receded under the influence of the Kobe market. Coffee has been active, with steady quotations for spot delivery. Stocks of cereals have been decreasing, except in maize. The market has been quiet, but demand has been normal and no change in prices has occurred.

The Sudan.

There is little change to report in the Sudan. All markets have been quiet, but greater activity is anticipated in the near future. Stocks of piece-goods are heavy, with a poor demand and declining quotations. There have been some dealings in the new gum crop, but it is too early to estimate the yield with any accuracy. In some cases, high prices have been obtained, but foreign buyers show a disinclination to do business until the position of the market is better known. Adequate sales are reported for the new sesame crop. Quotations opened at £E16 for white and £E15 for red, but later fell to £E14.750 and £E14 respectively. The groundnut crop is of good quality and it is expected that there will be the usual exports to Egypt and the Continent. The market for coffee has been dull, with little demand. Prices fell to PT350 per kantar, and in some quarters a further decline is anticipated.

Palestine.

The effect on trade of the August disturbances is becoming increasingly apparent and importers are placing orders on only a small scale. An impetus has been given to the sale of electrical accessories, owing to the new Jerusalem Electric Company being now in a position to supply current. Opinions regarding the prospects of the orange season are rather reserved this year, in view of the miscalculations in previous seasons. Shipments have already taken place for the United Kingdom, the rate of freight charged per case of oranges being 1s. 10½d. net. One shipping line has already concluded contracts at this rate for the shipment of about 500,000 cases, and it is reported that the Polish Government has authorised the importation of 750 tons (13,500 cases) of Palestine oranges for the season 1929-30.

The colonial goods market is at a standstill. Compared with a month ago, a fall in prices is reported in rice, attributed to the new Egyptian crop which has been placed on the market. Quotations for coffee have also declined, owing to the low prices existing at the countries of origin. No change is reported in the cereal market and quotations remain unaltered. The latest published Government figures show that imports for July, 1929, amounted to £P507,150, compared with £P499,311 for the corresponding period last year; exports were £P106,919, against £P92,296. Government revenue for the first eight months of the current year totalled £P1,471,612, against an expenditure of £P1,164,578.

According to a report from Sofia in the *Frankfurter Zeitung* the Administrative Board of the National Bank of Bulgaria decided to increase as from November 30 the difference between the purchasing and the selling price of the dollar exchange, which hitherto amounted to 50 statinki, by a further amount of 50 statinki, so that the U.S. dollar, instead of being bought at 138.20 leva and sold at 138.70 leva as previously, will now be officially purchased at 138 leva and sold at 139 leva. This measure is intended to make the purchase of foreign currencies a little more difficult and so to work against the large import of commodities and against the efflux of foreign currencies. Furthermore, it is intended to defer the value dates of credit entries for foreign currencies at the private banks. As for some years past, foreign currencies are cheaper to borrow than leva and leva are always scarce, and therefore banks, and especially foreign banks, prefer to lend foreign currencies. These are then exchanged into leva at the National Bank with the right of repurchase in one to three months.

Company Meetings.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

Company's Financial Strength.

Lord Inchcape's Address.

The Earl of Inchcape, the company's chairman, presided on December 11 at the eighty-ninth annual general meeting of the Peninsular and Oriental Steam Navigation Company, held at the offices of the company, 122, Leadenhall Street, E.C.

The report and accounts having been taken as read,

His Lordship said that a careful survey of the financial position of the P. and O. and its allied companies had been made by the accountants. If they discharged all the current liabilities of the P. and O. and its combined companies and repaid the Preference shares of the P. and O. and allied companies, together with their debentures and the Debenture stock of the P. and O., they could do this from their cash and securities, and there would be a balance left of something approaching 2½ or 3 millions sterling, which would be the property of the P. and O. Deferred and Preferred stockholders. In addition to this the Preferred and Deferred stockholders would be the absolute proprietors of 318 unencumbered steamers of 2,074,563 tons gross register, which, if valued at their original cost, less 4 per cent. per annum depreciation, the rate allowed by the Income Tax Commissioners, would be worth £46,863,004. In addition they would have the company's freehold properties in Leadenhall Street and Cockspur Street, worth at least half-a-million, so that assets in excess of all their liabilities were worth about fifty millions sterling against Preferred and Deferred capital stock of £7,632,518. (Hear, hear.) If they wrote their ships down to 23 millions, their assets, after paying off all their liabilities, would still be something like 26 millions. That position was the outcome of a cautious and conservative policy adopted by the Boards for many years. Possibly the shareholders might think the policy had been too cautious, but he hoped not.

Need of Economy.

In the period of depression through which shipping was passing, a great responsibility rested on the Board and management of the P. and O. Company and on those of its allies to secure, by all possible effort, cargo and passenger earnings and meticulously to watch expenditure in order that their voyages might show a decent margin of profit. In this they were being loyally assisted by their agents, their brokers, their shore staff, their captains, officers, engineers, and pursers, of whose services they could not speak too highly. (Hear, hear.) Many of their voyages during the past year had left but slight margins—some, a loss—which he believed was the case with most shipping companies. They would, however, continue to do all in their power to provide up-to-date ships, to give satisfactory cargo and passenger services, and to maintain public good will.

Care of the Company's Securities.

In view of what had occurred in the City recently he would mention that for many years past the registers of all their stocks and securities had been carefully scrutinised by an independent authority every fortnight, and that they received a certificate at the end of each year stating that such stocks and securities were in order.

Improvements in the Company's Fleet.

Traffic with Australia.

Continuing, his Lordship said that they had lately spent a good deal of money with a view to improving the accommodation, increasing the speed and reducing the fuel consumption of some of their vessels built a few years ago, and the results so far had been highly satisfactory.

The company's branch line service to and from Australia via the Cape had for some years past resulted in losses, owing to the advent in the trade of the tonnage of the Government Commonwealth Line. The branch line had been discontinued and they had placed several of the ships on the Suez Canal route, where they hoped to do better, aided by rationalisation generally between the lines in the Australian trade. Hitherto their Australian mail steamers had carried only first and second saloon passengers, but in the hope that there might be a considerable movement of our population to Australia, they had made arrangements in several of the mail steamers to accommodate passengers paying a lower rate of passage money. A growing disposition on the part of the people in Australia to pay a visit to the Old Country led them to anticipate considerable numbers homewards as well as outwards.

Since the closing of their accounts they had disposed of the *Nellore* and *Delta* at prices exceeding their book value, and the difference would be applied to depreciation account next year.

The Viceroy of India.

The latest addition to the P. and O. fleet, the *Viceroy of India*, 10,700 tons, with accommodation for 622 saloon passengers, was out in commission in April last, and had made two round Bombay voyages and five pleasure cruises. The accommodation, fuel consumption, speed, and seagoing qualities had quite realised expecta-

tions. So far she had carried 5,800 passengers, and they had had dozens of letters of appreciation of the ship and of all on board, from Captain Ohlson downwards. He had got permission to read one such letter lately received from a member of the Cabinet. It was as follows:—

"On my recent visit to the Mediterranean I was a passenger between Malta and Gibraltar in the *Viceroy of India*. May I say how much I admire your very fine ship, in which every possible step was taken to secure our comfort and convenience? I should also like to add that Captain Ohlson was the soul of courtesy."

A copy of that letter had been sent to Captain Ohlson

Four New Vessels.

The Board were, his Lordship continued, about to place an order for two Australian ships of 20,000 tons with large saloon passenger accommodation, every cabin having a port hole open to the sea, a spacious boat deck for sports, comfortable third-class cabins, together with good cargo and refrigerated space, and, like the *Viceroy of India*, they were to have the turbo-electric drive and oil fuel. They had recently placed orders for two up-to-date cargo and refrigerated steamers for one of their regular lines, to carry 9,580 tons dead-weight, with a sea-speed, fully laden, of 15 knots.

Pulverised Coal.

They were looking carefully into the question of using pulverised fuel in the cargo ships which they would have soon to build for their allies to replace older vessels. It was maintained, and not, he thought, without justification, that there would be a considerable economy in using pulverised coal in preference to oil, for the pulverisation plant had now reached a stage of greater efficiency. A steamer of one of their allied companies was recently fitted with half of her steam generating plant for pulverised fuel, and she was now being fitted with the other half, so that she would run entirely with pulverised fuel, which finds its way to the furnace as easily as oil and is much cheaper. When the present experiments had proved completely satisfactory, they might, for reasons of economy, introduce the system into passenger as well as cargo steamers.

They could help the coal industry by adopting more efficient and economical ways of using and handling coal, and it would be all to the good of the country.

The Insurance Fund.

They would have observed that the insurance fund, as he anticipated a year ago, now stood at the round figure of three millions

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

sterling. All outstanding liabilities under it had been discharged and a balance remained of some £73,000, which had been brought to credit in profit and loss account.

Safe Navigation of Allied Vessels.

Not one of the vessels of the P. and O. combine had been lost during the year. They had had one or two accidents, but none of a serious nature. A collision occurred in a dense fog in the Bay of Biscay between a P. and O. steamer and another vessel. Both were held to blame. The damage to the ships was not serious. In another case one of their steamers was considerably damaged in the Scheldt by a Belgian ship. The Belgian was held to be entirely in the wrong, but being of only 1,000 tons gross register, her liability under the Act was limited to £8,000, and they had had to bear the difference between that amount and the expense of repairing the ship, which was about £15,000. The £8,000 would be duly recovered. In the past year the combine alone had had 322 steamers in commission; they had entered and left ports 22,000 times and had traversed 14 million miles across the seas. He hoped they might be equally fortunate in the current year. But the Board and the management were never free from anxiety as telegrams came to be opened, not knowing what their contents might be.

In a business such as theirs, catering for manufacturers, merchants, and shippers in nearly every trade, carrying people of nearly every nationality, they spared no effort to give satisfaction. They received far more eulogistic letters than complaints. Every letter of complaint was courteously answered and inquired into and those of the other category were acknowledged with thanks and a copy sent to the commander for the information of himself and his ship's company.

Interesting Statistics.

At their last annual meeting he had mentioned that the steamers of the P. and O., its allies, and associated companies, had safely transported over two million passengers. He was glad to say, with all thankfulness, that they had carried during the year under review 2,202,000 passengers across seventeen million miles of ocean without the loss of a single life. The P. and O. steamers alone had carried 89,377 passengers during the last year, against 82,954 in the previous year, an increase of 6,423.

To their allied companies they were greatly indebted for their successful work during the year, which had largely contributed to the results of the past twelve months. Their ships were all well written down under the Government rate of depreciation and they had investments independent of their ships which were worth a good deal more than their book values.

Port entries and port clearances made by the company's steamers and those of its allies and associated companies during the year totalled 30,084; cargo carried, 15,796,565 tons; heads of live stock carried, 322,855; average daily crew employed, 36,902; and daily expenditure for wages and victualling of crews, £14,452. Cargo exceeded by 92,000 tons that of the previous year—not very much, but on the right side.

They were careful to see that their vessels never left a port overloaded, and that they were in good trim. They got a certificate before each sailing, signed by the captain, the chief officer, the chief engineer, the doctor, and the purser, certifying that all on board was in order and to their satisfaction. Bad weather was sometimes encountered, but their commanders appreciated that there was nothing to be gained by driving their ships into high seas and that it was better to ease down till the worst was over, not only to avoid damage, but for the comfort of all on board. Time lost in slowing down till the weather moderated could, in the case of high-powered mail steamers, generally be made up; and it was seldom that the P. and O. steamers failed to reach their ports at scheduled time.

He was glad to say that their steamers had got through the record gales of the last few days without damage. On Friday the *Ranchi* was inward bound and the *Ranpura* outward bound for Bombay. The *Ranpura* must have encountered the full force of the gale in the Channel on Saturday, and in the afternoon she got an S.O.S. from an Italian steamer in distress at Brest. She reached her at 5 p.m. and stood by her till 10 p.m., when a French man-of-war came out and relieved the *Ranpura*, which then proceeded on her voyage and reached Gibraltar up to time. He could speak with some experience of the gale, as he had crossed from Boulogne on Sunday in the worst weather he had ever encountered. Folkestone harbour was closed and they had had to make for Dover. He had been lost in admiration of the way Captain Greenock handled his little ship, the *Maid of Orleans*, bringing her alongside the quay at Dover without damaging a rope-yarn.

Everything possible was done to ensure the safety of their ships and those on board, although a case of neglect, or something worse, might occur amongst the 37,000 men and women constantly engaged in the ships of the P. and O. Company, its allies and associates, but when that happened those at fault were no longer employed.

The Mail Services.

He was pleased to say their obligations under the postal contract had again gone satisfactorily. In the year ending September 30, 1922, they had landed and embarked 377,536 bags of mails at Marseilles, and in the year ending September 30, 1929, they landed and embarked no less than 634,151 bags, an increase of 256,615 bags, in addition to 25,100 tons of parcel post shipped in London.

Considering that this mail matter was for and from Great Britain, the Continent of Europe, Gibraltar, Malta, Egypt, Cyprus, Palestine, Aden, India, Persia, Iraq, Seychelles, East Africa, Ceylon, the Straits Settlements, Siam, Indo-China, Borneo, Hong Kong, China, Japan, Australia, and New Zealand, it was gratifying that mistakes or losses had been infinitesimal.

At the request of the Postmaster-General they had now arranged to get their mail steamers into Marseilles on Fridays instead of on Saturdays during the monsoon, when possible, so that the mails might be in London on the Saturday afternoon instead of on the Sunday. This would mean driving a good deal harder from Bombay and Colombo to Aden against the heavy south-west monsoon weather at a considerable increase in fuel consumption, but it would be a convenience to the Post Office and to the company's passengers who came by rail from Marseilles and who would thus arrive in London on the Saturday instead of on the Sunday afternoon.

Air Carriage and Sea Transport.

He did not wish to belittle air transport, but he was doubtful if there would be any economic competition from the air for many years to come. The P. and O. Company had some years ago been asked to put money into airships and aeroplanes; regarding their heritage as the sea, they had declined to do so.

Communications with Malta.

The fortnightly calls of the company's Bombay mail steamers at Malta, out and home, had proved a great convenience to the people at Malta. He would like to express his appreciation of the ready assistance always rendered to their steamers by the naval authorities in Malta, by which they got convenient moorings and prompt pilotage attendance. Their stays were thereby reduced to a minimum. Lord Strickland, the head of the Maltese Government, had driven a hard bargain in regard to the calls at Malta, but the Board had been desirous of meeting the requirements of the important naval base and rather isolated colony in the Mediterranean.

Care of Passengers' Baggage.

He had referred last year to a statement in an Indian newspaper that passengers by the P. and O. Company were constantly losing their baggage. The weekly report on the subject which he had arranged to receive showed that for the three years ending September 30, 1928, out of a probable 300,470 packages of passengers' baggage, only eight had not been traced. For the year ending September 30, 1929, the P. and O. landed in Bombay from Europe 9,523 passengers, and, assuming each had ten packages, a conservative estimate, this would mean 95,230 packages, and there had not been one missing. He would again like to express his appreciation of the landing, clearing, and shipping arrangements for passengers, mails, and baggage made by the Port Trust, the postal authorities, the Customs, and the railway administration in Bombay at the Ballard Pier, which was not surpassed or, he might say, equalled at any other port in the world.

As the ships using Ballard Pier got larger and drew more water, every effort was made by the Bombay Port Trust to deepen the channel and the depth of water at the pier, so as to avoid delays. Passengers arriving at Bombay were greatly inconvenienced by the special trains awaiting them at the pier to take them up country or to Calcutta, and passengers homeward bound who arrived by the special trains were set down alongside the ship at the Ballard Pier. Passengers going to Burma were met at Howrah Station and put on board the waiting British India mail steamer, which sailed as soon as the mails and passengers were on board. Homeward passengers from Burma by the British India mail steamers were served by the P. and O. Bombay special from Calcutta.

India.

In common with the whole of the British mercantile community in India, he regarded with great apprehension the present position of affairs there. It looked as if we were to give way to certain agitators who threaten civil disobedience, disregard of the law and riot. Moscow was, in his opinion, at the bottom of it. The owners of tea gardens and mills were already insuring against possible damage to their property. A Bill had lately been introduced into the Legislative Assembly to prevent ships from trading between the ports of India unless they were owned by Indians. If the Bill went through and received the assent of the Governor-General, it would mean that no British-owned or British registered vessel could trade between ports on the whole coast of India or Burma. The British companies which have built up, fostered, and made this trade by up-to-date fleets would have to close their doors as far as these trades were concerned. If the Bill becomes law it would doubtless be followed by other measures to provide that all tea gardens, coffee plantations, coal mines, cotton, jute, and paper factories, stone quarries, inland steamers, and a hundred and one other industries, banks, insurance companies, newspapers, established and carried on by British capital, would have to be closed down. In fact, the Bill now before the Legislative Assembly was the thin end of the wedge to drive the British mercantile community out of the country. British government and administration, British capital, British enterprise, British brains, and

ATTWATER & SONS, PRESTON, England

British integrity had developed India and the British Army had protected its millions. These factors had made India the great country it was to-day. He earnestly trusted that no legislation would be sanctioned which would discriminate against Great Britain or its mercantile community. It would be a death-blow to the progress and prosperity of India, and to its credit, which was for the most part provided by Great Britain. There should be a fair field and no favour for all. An address he received in Calcutta in 1926 would appear in the report of the day's proceedings which bore testimony to the cordial relations which had always existed between the British and Indian commercial communities.

The Shipping Industry.—Difficult Conditions.

The trade with India and with China had been poor. India showed signs of improvement, but the continued unrest in China was militating against a revival in that country.

Probably at no time in the history of British shipping had the outlook for what were known as tramp steamers been more gloomy than it was to-day. At the moment there was more cargo tonnage in the world than was required to carry the trade. Ships had a way of wearing out, but there was no inducement for tramp owners to replace them at present-day prices, which were far in excess of what they were fifteen years ago.

The 8-hour Sea-day.—A Menace to Employment.

Notwithstanding that for some time past shipping as a whole had not been doing well, they were now faced with all sorts of ideas, such as the eight-hour day on board ship, which, if brought to fruition, would add to their difficulties and would do the men not a particle of good. Discipline on board ship had always been one of the very first essentials. In the old sailing ship days when, beating to windward, the ship had to go about every few hours, it was "All hands on deck," and the watch below had to tumble up, which they did, growling and cursing the wind. In steamships that sort of thing seldom happens, the crews as a rule having their watch below undisturbed and, though occasionally they might have more than eight hours on deck in the twenty-four, they had many of these hours only standing by, with no expenditure of tissue. They had bed, board, and lodging at their doors and did not have miles to travel to and from their work, as in the case of men ashore who do their eight hours a day. Salt horse out of the harness cask, on board steamers at any rate, had given way to fresh meat, and lime juice had been replaced by fresh provisions.

The days of sail had practically come to an end. The cry of the steward at the break of the poop when the ship, after a hard tussle by all hands, had been put about, was not so often heard as it was when he, the speaker, was a boy. Then it used to be "Grog-oh, forward!"

It would be a misfortune for the British mercantile marine if there were any interference with the present system, with which the Seamen's Union were perfectly satisfied.

Changes such as he had mentioned were bound to lead to increased working costs, which might necessitate putting vessels out of commission and lead to more unemployment.

International Maritime Labour Conference.

At a conference recently held at Geneva, under the International Labour Office, to deal with maritime subjects, certain conclusions were arrived at to form the basis of a reference to Governments, so that a Convention to apply to all countries could be brought into being. The recommendations of this Conference covered various subjects, including the regulation of hours of work on board ship.

Under the regulations which covered the attendance at this Maritime Conference all the countries, whether they possessed a large or small mercantile fleet, or no fleet at all, even those that had no outlet to the sea, were entitled to be present and to vote equally with Great Britain, which possesses by far the largest fleet of merchant ships in the world. Was it to be wondered at that British shipowners declined to be present at this Conference unless those who represented the seamen through their recognised union were given the fullest authority to speak for the men of the sea who served British shipping

with so much loyalty, and whose well-being was to British shipowners a matter of constant concern?

Peace had been maintained in the shipping industry for a long period of years, and, thanks to the reasonable methods both of the shipowners and the unions, strikes and stoppages, such as one heard of in other directions, had become things of the past.

Plea for Freedom from Government Interference in Trade.

He had, he said, read a letter in *The Times* of October 26 last from that veteran captain of industry, his friend Lord Joicey, in which he said: "In my judgment the coal industry would thrive better if coal owners were left alone instead of being constantly harassed by Governments in one form or another." What applied to the coal industry applied equally to all the industries of the country, and he most sincerely hoped that the Government would set an example on the lines suggested by Lord Joicey and avoid saddling the country with an army of functionaries. If the mercantile community were left alone to manage their concerns honestly and prudently and to attend to their own business, that would be the speediest road to a revival in trade and to the cure of unemployment.

Public Expenditure.

Continuing, his Lordship said he viewed, with considerable alarm, what the future of this country might be if public expenditure went on increasing as it was to-day, and if taxation took away the bulk of people's income and capital. If we went on as we were going, all profit made would be swallowed up by the State, incentive would vanish, and then where would the country be? Our credit would have disappeared; we should have sunk into a second-rate Power, or become like Russia. One of the left wing of the Labour Party had said that all who could not find work ought to be paid a working wage by the State. The cry of a certain section of the Labour Party was: "Rob the capitalist; deprive him of all he has earned; distribute it broadcast; allow no man to save anything." When that was done where would the capital required for industry come from, and where would the country get revenue to pay for defence, administration, and interest on the National Debt?

The Prime Minister of Australia.

A Welcome Pronouncement.

Mr. Scullin, the new Prime Minister of Australia, had made a pronouncement which he, the speaker, ventured to say had given great satisfaction, not only in this country but throughout the British Empire. Addressing Great Britain, Mr. Scullin said: "We need sometimes your sympathetic understanding, for, after all, we are members of the great British Commonwealth of Nations. In the broadest sense your interests are our interest. We are all concerned in the development of the great British Commonwealth. The Australian Labour Government wants to develop Australia with settlers from Great Britain, and if we do not take these settlers as quickly as some of you would like, it is only because we realise that unless industries are ready to receive them the new settlers will meet with disappointment and hardship."

It would be difficult to have a more statesmanlike and encouraging pronouncement than that of Mr. Scullin. He earnestly trusted that the Labour Government of Australia would do nothing to endanger the trade of that great and growing country.

Chinese Piracy.

The days of piracy in the China seas were by no means ended, judging from a letter he had received the other day from Hong Kong. The *Deli Maru*, belonging to the Osaka Shosen Kaisha, while on a voyage from Takao to Hong Kong, called at Swatow on September 20, where pirates are said to have embarked in the guise of passengers, and, in the early hours of the following morning, the Indian guards on duty were shot down without warning and the officers and wireless operator held up with automatic pistols. After robbing the passengers and officers of money and jewellery to the value of about 18,000 dollars, the captain was ordered to navigate the ship to

Cable Address: FRANCOBELG.

Hong-hai Bay, where the gang landed in the ship's boats, taking with them four of the passengers to be held for ransom. The cargo was not touched. The Japanese Consul-General had reported the incident to his Government, but whether anything in the nature of reprisals was contemplated was not known. The attack seemed to be a forerunner of renewed attempts on British shipping in these waters, judging by a report in the papers of Tuesday last, but the incident might perhaps serve as a salutary reminder that none of the present precautions could safely be relaxed, and he trusted the occurrence would result in a change of attitude on the part of the British authorities, who had announced in April last that the provision of naval and military guards would cease on April 1, 1930.

Profit Sharing.—The P. and O. Scheme.

Under the profit sharing scheme established in 1924 they now had deposits from employees of over a million sterling, on which they got 7½ per cent. interest so long as the P. and O. dividend was not less than 10 per cent. The deposits were at call on reasonable notice, but the depositors, over 1,200 in number, never seemed to want to withdraw their capital. If he were a depositor he would not want to withdraw his. A simple profit-sharing arrangement, it cost the company £20,000 a year or so, as he mentioned at the last meeting, and he was sure the stockholders would not grudge it. He had long wanted to inaugurate something of the kind, and the idea came to him one night in the sleeping-car on his way to Scotland. He had worked it out there and then sent it to his staff in London next morning. They had no objection to raise, and when it came before the Board it had their unanimous approval. If the stockholders approved of the payment of a dividend of 12 per cent. for the past year the employees would get their interest of 7½ per cent. on their deposits.

The Staff.

He would, he said, conclude by saying that no organisation, so far as he knew, was better served, nor was there any where the relations between the various Boards, agents, brokers, staff, and employees, both ashore and afloat, were happier than in the P. and O. Group. As Nelson said of the officers and men of his fleet at the Battle of the Nile, they worked together "Like a band of brothers," and this, he felt, would continue to be the case, not only while he remained in command, but with those who might come after him. (Applause.)

The Chairman then moved the adoption of the report and accounts, which was seconded by the Hon. Alexander Shaw and carried unanimously.

The dividends as recommended were unanimously approved.

The retiring directors were unanimously re-elected, and the proceedings terminated with a cordial vote of thanks to the Chairman, directors, and staff.

STEAUA ROMANA (BRITISH).

Increased Trading Profits.

The ninth annual general meeting of Steaua Romana (British), Ltd., was held on December 11 at Winchester House, E.C.

Sir Albert G. Stern, K.B.E., C.M.G., who presided in the absence of the Chairman, Lord Greenway, in moving the adoption of the report and accounts, said:—I referred last year to the serious effects on the earning power of the Steaua Romana of the low world selling prices of oil products, and I regret that we have little cause to congratulate ourselves in respect to 1929 markets. At the end of 1928, to add to the general fall in world prices the sales agreement between the producers and refiners in Roumania was dissolved, the local market became completely demoralised, and the reaction was also severely felt in neighbouring countries. For a long time it appeared impossible to reconcile the differences between the various companies operating in Roumania, but through the indefatigable energy of M. Osiceanu, who, as you know, is the President of the Association of Oil Industrials in Roumania in addition to being Director-General of the Steaua Romana, the very lengthy negotiations for a new agreement were brought to a satisfactory conclusion on November 20. I cannot over-emphasise the value of the work done by M. Osiceanu in this direction for the Steaua Romana and for the whole of the Roumanian oil industry. As a result of this renewal of friendly relations between the various Roumanian companies which has been almost coincident in time with a definite slackening of the rate of increase in American production, I hope that we may look forward with confidence to better prices in the near future in Roumania's natural markets.

As an offset to the decreased revenue obtainable from its sales of

products, the Steaua Romana has taken every available opportunity during the period under review of enforcing the most rigid economies. Drilling and production costs have been reduced, and the cost of a considerable quantity of new and economical plant has been provided out of revenue, and this will result in still further saving. During all this period of retrenchment it has been found possible to undertake a sufficiently large programme of drilling work to ensure a continuation of the steady advance in production figures, which has been the feature of the Steaua Romana since 1921.

The production from July 1, 1928, to June 30, 1929, was 737,624 tons, as compared with 578,964 tons in the previous year, an increase of nearly 28 per cent. For the five months ended November 30 last, the production was 388,752 tons, as compared with 300,273 tons during the corresponding five months of last year, an increase of 29 per cent. The total quantity of products exported during the year ended June 30, 1929 (including 100,327 tons purchased on the market), was 665,419 tons, an increase of 207,092 tons, or 45 per cent. on the previous year.

The Steaua Romana has, for years, taken the lead in pressing the Government to provide the most economic method of transport for the export of benzine. That is, the construction of a pipeline from Baicoi to Constantza. The Steaua Romana was prepared to lend its assistance for the completion of this enterprise, but delay after delay, year after year, has damped the hopes of those who have the prosperity of Roumania at heart. On my last visit to Roumania in the spring, our experts examined the whole question with great care and presented a copy of their report to the Government, but I regret to say that, so far, no start has been made in the construction of this pipeline which is of such vital importance to the oil industry and therefore to the economic development of Roumania. At the present time the Roumanian company pays in transport charges approximately 22 per cent. of the value of the crude oil produced; in fact, it costs practically as much to transport the finished products from the refineries to the internal distributing centres of Roumania or to the ports as it costs to drill the wells necessary to maintain production. Furthermore, a large proportion of the material which is used on the fields is not only encumbered by transport costs from other countries, but also has to bear very high import taxes.

Tank freights have shown a steady improvement during the present year, and if to-day's rates can be maintained, profits from the Steaua Romana's fleet will make a satisfactory showing. This applies more particularly to the latest addition to the fleet of the Steaua Romana, the Oltenia in which, as you know, your company has an interest. The Roumanian company did not see its way to declare a dividend for the year 1928, due principally to the circumstances to which I have already drawn your attention, namely: the very heavy taxation, the high cost of transport, the low selling prices obtained during the year, particularly in Roumania. The taxes which weigh so heavily on the oil industry are naturally dependent on the general prosperity of the country. It will therefore be of interest to note the efforts which the Government has recently made, and is still making, for reconstruction.

Our trading profits for the year have again been increased from £31,029 last year to £48,823, equal to about 53 per cent. increase, and the total profit for the year, before making provision for taxation, is £100,012. After deducting the approximate liability for income tax, there remains a balance of £87,412, which, added to the balance of £24,080 brought forward from last year, and an item of deferred interest amounting to £1,077, makes a total of £113,471. Subject to your approval, we propose paying a dividend on the Ordinary shares at the rate of 4 per cent. per annum (less tax), amounting to £64,000, placing to general reserve £25,000, and carrying forward a balance of £24,471.

The report and accounts were unanimously adopted.

COMPANY NOTES AND REPORTS.

TREPCA MINES.

The second report of Trepca Mines, Ltd. (which was formed in December, 1927, to acquire mining rights in Yugoslavia) covering the year ended September 30 last states that in March, 1929, 100,000 shares were subscribed for in cash at par and in June 85,000 shares were subscribed for in cash at par, being the balance remaining unissued of the then authorised capital. In July the authorised capital was increased from £200,000 to £1,000,000 by the creation of 3,200,000 new shares of 5s. each, of which 1,600,000 were issued to the shareholders credited as fully paid as a result of a re-valuation of the company's property. On July 26 an issue was made at par of 1,600,000 shares, which was fully subscribed. At the date of the balance-sheet the issued capital was £1,000,000 in 4,000,000 shares of 5s. each and these are all now fully paid. The results of development at the Stantrg Mine during the year have been very satisfactory and drilling has indicated a large tonnage of ore below the 760 metre level, the lowest of the four horizons on which the orebody has been opened up. Prospecting has also been initiated at Meljenica and Trepca Hill with encouraging results. The construction of the initial unit of the concentrating plant was commenced during the latter part of the summer, and it is hoped that production will commence about September next. This unit will have a capacity for treating 500 tons of ore per day. No fresh estimate of ore reserves has been made since July last, when the tonnage proved or indicated was estimated to be 1,750,000 tons of ore of an average grade of about 11.5 per cent. lead, 10.5 per cent. zinc, and 3 oz. silver per ton.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel*, of October 30, 1916.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 11:—

Egyptian Futures.

Sakel Contract.—We have again to report a very quiet state of affairs in this market; speculative and trade activities continue to be restricted to nominal proportions, so that we do not consider there is any exaggeration in stating the present situation, through which we are passing, one of the dulllest and least interesting phases witnessed for many seasons. During the earlier days of the week, values fluctuated closely in the neighbourhood of the level prevailing at the time of our last report, but more recently what appears to be forced hedging against some distress stocks has been in evidence, and although probably only about 2,000 bales were concerned, this quantity in the present state of the market proved sufficient to depress prices about 25 points. During the later trading yesterday, and also in to-day's session, a slight improvement in the undertone has been noticeable, with a corresponding recovery of a few points, making to-night's close 21 points lower for near positions and 17 to 21 points for more distant deliveries. Reports from Alexandria indicate similar conditions prevailing there to those at this side; accumulating stocks and lack of demand are gradually forcing the January position down to the 27 dollar mark, and the general tenor of private advices is of a somewhat pessimistic character. The local trade demand for Sakel qualities during the past week has been very moderate, and spinners are complaining of both the lack of business and a further shrinkage in margins. We cannot anticipate any factors developing to alter materially prices from the existing level. The combined effects of a distinctly "bullish" movement in the American departments and a revival of trade interest in our own cotton might lift the market out of its present groove, but as neither of these factors is in sight at the moment, we see little object in advising commitments.

Upper Contract.—A slight increase in activities has been witnessed in this contract during the past week, but the trade purchases have not been sufficient to offset selling by import houses, with the result that a slight decline on the week has again been registered. In our last report we inadvertently stated that the early December tenders had been taken by exporters. We understand that in reality this cotton went to the Government. Further heavy tenders appear probable, as, at the time of writing, the current position in Alexandria is quoted at 10.01 dollars. Our differences with the American contract remain within a few points of last week's figure, and whilst the Upper varieties at this figure appear to stand at a reasonable basis, the trade offtake at the moment appears insufficient to cause any upturn for the immediate future.

Egyptian Spot.

Conditions here have been quiet again, and, except during the last two days, very little interest has been shown in spot Egyptians. The reduction in the American Bureau figures last Monday proved to be somewhat smaller than had been expected, and, instead of the rise in values which had been hoped for, further liquidation ensued, with a consequent reduction in spot quotations. Nevertheless, we believe that the trade here is ready to purchase raw material, and all that is wanted is for prices to remain steady for a while, or, better still, to commence a recovery, be it ever such a slow one. Yesterday's slight recovery in New York values caused a marked increase in to-day's spot inquiry, and if only a moderate business has resulted it is because spinners are anxiously waiting to see if the decline has really been checked before committing themselves. It is perhaps

unfortunate that the end-of-the-year holidays are so near, as even in normal circumstances the period immediately preceding them is usually a quiet one. The important point to bear in mind is that Sakels under 14d., and Uppers in the neighbourhood of 10½d., are undoubtedly attractive, and, that being so, the turn cannot be indefinitely delayed.

Sakels have been in limited request at from 50 off to 50 on, but the better grades have failed to attract attention except in isolated cases.

Uppers have been in fair demand for practically all qualities, with the exception of the best. On one day a prominent spinner purchased a line of cotton at about 40 on. This was believed to be in replacement of cotton at sea which had been delayed.

Pilon.—This growth has aroused very little interest this week.

Nahda and White.—Rather more interest has been shown in these two growths.

Maarad, Fuadi, etc.—These have both suffered from neglect, although Maarad cotton is being offered on what appears to be a very attractive basis.

Low Cotton.—Low and Inferior grades have figured prominently in the inquiry at from 4½d. to 12½d. Results must have been disappointing, as the market has been well combed.

Sudan Sakel.—More interest has been shown during the past few days.

Tokar Sakel has remained neglected.

C.i.f. business has been quiet for the most part. Forwardings last week were returned as 10,457 bales Egyptians and 1,642 bales Sudans. Quotations of Sakel show a reduction of from 25 to 35 points. Uppers are 14, and Pilon 15 points lower on the week. F.G.F. Sakel to-day, 14.42d. F.G.F. Upper to-day, 10.60d. F.G.F. Pilon to-day, 11.45d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 5, state:—

Since our last report the futures market has again shown very little activity, and fluctuations have been negligible. The week's summary of price movements is as follows:—Sakellaridis: January, 27.67 dollars, 0.06 dollars down; March, 28.20 dollars, 0.05 dollars down; May, 28.66 dollars, 0.12 dollars down; July, 29.00 dollars, 0.02 dollars down; November N.C., 29.66 dollars, 0.03 dollars up. Ashmouni: December, 19.14 dollars, 0.01 dollars up; February, 19.54 dollars, 0.08 dollars down; April, 19.97 dollars, 0.01 dollars down; June, 20.30 dollars, 0.03 dollars down; August, 20.60 dollars, 0.03 dollars down; October N.C., 20.85 dollars, 0.02 dollars up.

CYPRUS IMPORTS INCREASING.

The report on Cyprus trade for October shows that, compared with October 1928, there was an increase of £7,000 in the value of the imports, the total being £189,672, but there was a decrease of £14,600 in exports, the total being £148,311. Both imports and exports, however, were about the quinquennial average.

For the ten months, January to October, the following are the values of imports and exports as compared with the same period last year.

	Imports.	Exports.
	£	£
1929	1,686,412	1,400,108
1928	1,488,887	1,209,359
Increase	197,525	190,749

The principal items accounting for the increase in imports were : cotton goods (plus £2,901), chemical manure (plus £6,851), petrol (plus £7,412), and sacks (plus £1,965). There were decreases in machinery (minus £3,359), motor cars (minus £4,904), timber (minus

£5,134), and, owing to the good olive crop, in edible oils (minus £2,014).

The fall in exports was mainly due to decreases in asbestos (minus £4,882), iron pyrites (minus £11,405), carobs (minus £10,644), and raisins (minus £5,480). There were increases in barley (plus £2,500), hides and skins (plus £2974), mules (plus £1,831), oxen (plus £2,194), and wine (plus £1,967).

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for November was 70,640 tons.

It is reported that as no tenders for concessions to drill for oil in Epirus have been received the Greek Government has decided to drop the matter for the time being.

A Cairo message states that the Egyptian State Railways have awarded a contract for 165,000 tons of Welsh coal to Messrs. Beynon, whose tender of 28s. 4½d. per ton was the lowest received.

During the period from August 1 to the end of September 400,000 tons of barley were exported from Roumania to Germany. The fresh estimates of the maize harvest put the yield at 6 million tons, the largest on record, and the surplus for export is estimated at 3 million tons.

Stock and Share Markets.

Notes of the Week.

Owing to the Christmas Holidays this issue of *The Near East and India* has had to be printed on December 21.

Turkey and Russia.

It was inevitable that the Soviet Government should look askance at any seeming attempt on Turkey's part to renew touch with the Western Powers, in particular with Great Britain. Possibly owing to divided counsels in Moscow, Russo-Turkish relations have recently been strained as a result of the high-handed treatment, amounting in some instances to confiscation, of Turkish imports into Russia. At the same time Turkey's drastic methods of dealing with Communistic tendencies in her midst as illustrated by the recent sentences passed on Communists at a trial at Smyrna, must have been distasteful to the Soviet Government, even if it found no occasion to intervene in the matter. Consequently, when the visit of a British fleet to Turkish waters was made the occasion of what might be interpreted as *redintegratio amoris* between Turkey and Great Britain, it was inevitable that the former would be expected to reassure Soviet opinion, if any reliance was to be placed on Turkish assurances of a desire to live on good terms with her powerful neighbour. Hence the visit to Ankara of M. Karakhan and the formal renewal of the Russo-Turkish Pact of Friendship and Neutrality, with its Protocol. The attempt has been made to read into the Protocol a tightening up of the relations between the Soviet and Turkish Governments; but inasmuch as the Article in question is restricted in its application to agreements "with States contiguous by land or sea" to either party, it would not appear to bear any relation to Turkey's action in regard to any Western Power. The expression "contiguous by sea" might conceivably find different interpretations among lawyers, but the purpose of Turkey in inserting it can hardly have been to reserve herself freedom of action in respect of Switzerland, Czechoslovakia, Austria and Hungary alone of European countries.

The Regime in Greece.

The suggestion put forward by M. Venizelos that a plebiscite should be held to decide for all time the question of Republic or Monarchy in Greece is not likely to be accepted by the Greek monarchists at this particular moment. Without having renounced the faith that is in

them, M. Tsaldaris and those who think with him—possibly a larger number of Greeks than those who are actually enrolled in his Popular Party—are understood to have accepted the Republic as a necessity for the time being. Beyond that point they are not anxious to go, as they have probably a shrewd idea that the Greek public is not likely at the present moment to adopt any course calculated to revive a controversy that has led to bloodshed in the past and which must in any case distract the attention of the nation from the all-important task of economic reconstruction. Interpreted in the light of the passage in Thucydides which our Athens Correspondent quotes this week, the Republic serves Greece well enough these days, and there are many Greeks, no doubt, who will be tempted to apply to their own contemporary political affairs the warning of the Delphic Oracle regarding Kamarina. Whether the recurrence of difficulty in days to come in the selection of a suitable President will incline the country to find virtue in a non-elected Head of the State remains to be seen. M. Venizelos certainly gave expression to a point of view that will appeal strongly to Greek public men when he declined the Presidency for himself on the ground that he was still active enough to be more useful to the country in a less exalted position.

Great Britain and Iraq.

It would be unstatesmanlike to imagine, from the optimism which reigns, or is professed, in official circles in this country, that British policy in the East is now on the tack which will inevitably mean smooth sailing in the future. Few people who know the East will be found to believe that, for instance, Iraq, or Egypt, will voyage on to that harbour which is perhaps more serene than safe, namely, the League of Nations, without encountering one or two formidable snags. Undue elation is often as ill-founded as undue depression. It is well, in short, to realise that suspicion of officials embodying a certain (or uncertain) policy in the East is not suddenly removed by any change of that policy. This fact appears, as will be noted on another page, on which we reproduce an article from *Al Iraq*, to be peculiarly obvious in Iraq. There, the suspicion of Advisers or other officials which is, seemingly, only too general, is an unwelcome sign. That one Baghdad paper does not necessarily represent the views of the mass of the Iraqi people needs, of course, no emphasising, but there are signs that a nice enough

balance between the inevitable and natural diminution of British Advisers' powers and the rapid curtailment of their duties has not yet been struck. If this were not so, if the atmosphere were such a one of "kindliness" as the Colonial Secretary has described, how could such an article have been printed in *Al Iraq*? It is to be feared, indeed, that the undoubted and very considerable ability of the Iraqi *intelligentsia* is occasionally manifested at the cost of their stability. Stability is a rare virtue, one of the main ingredients of which, we should say, is gratitude. That certain honest Iraqis are genuinely grateful to Great Britain for what she has done in Mesopotamia is freely admitted, but it is probably true to say that those who profess this gratitude lead the most harassed lives in Iraq. Unpopularity, it seems, lies that way.

An Unfortunate Blunder.

It is particularly unfortunate, in connexion with this subject of Anglo-Iraqi relations, that a certain passage in the letter which the lamented Sir Abdul Muhsin wrote just before his death should have been mistranslated into English. It will be recalled that *The Times* and, subsequently, most other papers, published that the late Prime Minister had stated that Iraq was "far from deserving independence," a phrase which, as the Iraqi Minister in London promptly pointed out, should have been rendered "far from independence." This blunder, a most crass one, would appear to have had the most unfortunate effects, for it at once roused the old suspicion of British motives in Iraq. An incident such as this is easily capable of undoing the results of months of good work. Anew and with feverish eagerness the motives of all British officials are examined by Iraqi publicists, who are apt on occasion to find most fantastic reasons for any given action. The sort of comment which we have in mind is that which was made upon the appointment of Sir Francis Humphrys to Baghdad. Because, when the new High Commissioner was at Kabul, a revolt had broken out in Afghanistan, so, it was argued, was the disintegration of Iraq envisaged by the British Government. To such a state of affairs as makes the breeding of such ideas possible there is only one remedy: absolutely straight and unequivocal dealing. That the Mandatory Power is not without blame in this matter may be granted, but its policy having now been irrevocably declared, it is, it seems to us, for the Iraqis to show the graces of the situation. Bad impressions can always be removed as between men of honesty and good-intent, provided that firmness, courtesy, and understanding are shown. Stability is always more than ability.

Armenians in Syria.

It would be interesting to know the exact cause that has prompted the egress from Turkey of large masses of Armenians and their ingress into Syria, where they are, according to official information, seeking the assistance of the French Mandatary, who, as is well known, has already set up a régime for the Armenian refugees in the north-west of Syria. There has been considerable propaganda on behalf of the Armenian "Home" under the ægis of the Bolshevik Government of Russia, and there has been at the same time considerable writing-down of the attempt of the French to establish in Syria a home for this unhappy people. Whether the Armenians who have been leaving Turkey lately in such large numbers have different views from their brethren in the Diaspora on the virtues of the "Russian" Armenia; whether there has been fresh oppression of them by the Turkish authorities; whether it is merely those living near the southern border of Turkey who have emigrated; and whether they really believe that a new Armenia can best be built in Syria—on none of these conjectures is there any definite information. What is beyond doubt is the invasion of Syria by destitute Armenians, and, naturally, to the French Mandatary this is a troublesome fact. The League of Nations, which through its Commission for Refugees has done much good work in Syria, is aware of the unfortunate situation. This situation is difficult in every respect, financial, political, and human. Those Western Europeans who have not wholly forgotten their promises to the Armenian people will look with considerable anxiety on this new development in the Armenian position, more especially as the Armenians lack, what some other scattered folk possess in abundance, international standing and eloquent voices in every country to remind the Great Powers of their War-time pledges.

INDIAN NOTES.

Party Politics in Bengal.

Sir Stanley Jackson, Governor of Bengal, has made another attempt to work the reformed constitution in that Presidency. He has appointed a Ministry consisting of one Hindu, Kumar Shib Shekessur Roy, and two Muslims, Khan Bahadur Ghulam Farouqi and Mr. Nazimuddin. With the old Council the difficulty was to find Ministers who could command the support of the majority. And the object of the Governor in holding the recent general election was to ascertain if the constituencies would elect members from among whom it would be possible to choose a Ministry that would be likely to last. Presumably it has proved still to be difficult to make a selection, as some time has now elapsed since the new Council was constituted. On the face of it there ought not to be great difficulty, seeing that the professed co-operators are in a majority of about thirty. But hitherto the majority has been hopelessly divided. The Muhammadans have been the principal difficulty. Some of them are, of course, Swarajists, but the majority are co-operators. They have failed, however, to act as a party. They have been fighting among themselves over personal issues instead of uniting to support a Ministry. But the latest information is that now there is at any rate a possibility of these opposing elements combining so far as to form not more than two groups. And it may be of course that this more hopeful sign has encouraged Sir Stanley Jackson to persevere in his efforts to work the constitution. The attitude of the European group in the Legislative Council seems to have changed of late. Hitherto the Europeans have generally supported any Ministry that had a reasonably strong following in the Council. But their leader stated recently that they would "not undertake to support such a Ministry as it is rumoured will shortly be formed." This declaration would seem to complicate matters. But after all the

THURSDAY, DECEMBER 26, 1929.

ECONOMIC PROGRESS IN THE NEAR EAST.

For none of the countries of South-Eastern Europe has the year now drawing to a close been altogether uneventful, and most of them are able to regard it with no small measure of satisfaction. The political stability that they have enjoyed in an unwonted degree has enabled several, if not all, of them to devote attention to economic affairs, and for the first time a more or less systematic attempt has been made to cope with economic reconstruction on sound and scientific lines. The situation has been helped in some of the countries by a favourable harvest, and there must still be marked fluctuations of prosperity in lands so largely dependent on their agricultural resources; but hardly a country has failed during the last twelve months to take some steps towards increasing the general productivity of the soil. If, therefore, a single feature has to be selected to characterise the year 1929 for South-Eastern Europe as a whole, it may well be the promise of economic progress that this part of the world now holds out as a result of a real, though tardy, effort to grapple with the one problem which is of vital concern to all. The measure of success attained has inevitably depended on the available resources of the individual country, and on this point the various experiences have been interesting and instructive. Greece, having carried her political feuds to more extreme lengths than any other country, has shown the greater reaction to the political stability that M. Venizelos's régime has introduced, and finds herself in a comparatively affluent position; Roumania, in spite of a foreign loan, has had too much leeway to make up in securing financial equilibrium, to do more than take the initial steps towards economic progress, but with the help of a foreign Adviser attached to the National Bank has laid the foundations of a strong economic position. Yugoslavia has solved her political troubles for the time being by means of a Dictatorship, but is prevented by the admittedly temporary character of the present régime from obtaining the foreign loan that is essential to any comprehensive programme of reconstruction; Bulgaria alone among the States of South-Eastern Europe is too much a victim of circumstances to admit that she can record any headway during the past year; Turkey, on the other hand, is tempted to mark each succeeding year as *annus mirabilis*, but, until she obtained the help of a foreign loan, the actual progress to which she can point must needs be restricted, for all the good intentions and legislative activity that she brings to bear on economic affairs.

The situation in Greece deserves attention, if only in order that it may serve as an example to her neighbours. It is the more striking in view of her financial history, in which figures the establishment of an International Financial Commission to control the collection and distribution of State revenues assigned to the service of

foreign loans. To-day Greece is devoting considerably over two million pounds annually towards the liquidation of her debts, and she claims that the taxpayers have been contributing twenty-five per cent. of their income to the State Treasury as compared with twenty-two-and-a-half per cent. paid in Great Britain, twenty per cent. paid in Italy, and eighteen per cent. in France. The burden laid upon the country, however, was proving too onerous, as was shown by the crisis that had overtaken Greek commerce and industry, and it has been possible to effect a substantial reduction in certain items of taxation. A still more important factor in the reconstruction of Greece is the big programme of public works now in course of execution. Prominent among these works are the two land reclamation and irrigation schemes connected with the Vardar River and with the plans of Thessaly and Epirus. The completion of these works will entail a material addition to the cultivable area of Greece, for the development of which an ample supply of labour will be available among a population that has been subjected to the sudden and considerable increase caused by the influx of refugees from Asia Minor. Provision in this and other ways is being made for the steady expansion of the country's revenue, and no difficulty should be experienced in overcoming the economic difficulties in which Greek trade and industry find themselves involved; for the moment in common with business interests in other countries.

The lesson to be drawn from Greece's experience, as from that of Roumania, would seem to be that economic salvation is to be found by any State in a similar position only in whole-hearted co-operation with foreign capital and foreign advice. No small advantage has been derived by Greece over a troublous period by the steady influence exercised by the International Financial Commission, and it is not without significance that a recent difference of opinion between the Government and the Commission turned on the point whether the latter was entitled to refuse to extend its supervision over further sources of revenue earmarked for fresh loans. It is true that difficulties have arisen between the Government and some of the foreign contracting firms, but these would seem to have been satisfactorily settled—with the exception in regard to which the dispute is now under arbitration. In the light of her neighbour's experience it is unfortunate that Turkey has not seen her way to adopt a similar line of action to give practical and more immediate effect to the Government's aims for the economic rehabilitation of the country. Turkey's need for outside help is the greater, because she is handicapped by the narrow limits of her Budget (only two-thirds of that of Greece when both are expressed in pounds sterling), the wide extent of her territory (five times that of Greece) and the relative smallness of her population (only twice that of Greece). From the point of view of the nation's *amour propre* there may be much to be said for the development of a country by its own unaided efforts; but in these days of fierce competition it may be doubted whether any backward country that values its position in the comity of nations can afford to indulge in the luxury of a slow rate of progress. The wisest Governments to-day are those that are prepared to take a few risks on the continuance of peace in a war-satiated world and, during the few years that it seems possible to see ahead, to concentrate every effort on material development. As far as Greco-Turkish rivalry is concerned it appears as if the point of view of those who now direct the destinies of Greece is that Turkey is welcome to her naval and military superiority while there is no chance of its being put to the test, provided that, if ever the dogs of war are let slip again—fortunately a more and more remote possibility—Greece can enter the fray with financial and economic resources far exceeding any that Turkey will be able to mobilize.

'The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, December 12.

Banquet to the High Commissioner.

This week the Minister for Foreign Affairs, Midhat Yeghen Pasha, gave a banquet at Shepherd's Hotel in honour of the High Commissioner and Lady Loraine. Over a hundred and fifty covers were laid. The guests included the Ministers, the Palace staff, and the leading British officials and residents and their wives. Next week a similar banquet will be offered by Midhat Pasha to the Diplomatic Corps and the leading foreign residents. These banquets will be repeated next January or February when the new Cabinet is in office, for it is a tradition that each Foreign Minister offers an entertainment of this description to the High Commissioner and to the Diplomatic Corps.

"Le Journal du Caire."

The *doyen* of the foreign Press in Cairo, the *Journal du Caire*, celebrated the thirtieth anniversary of its foundation by a reception at Shepherd's Hotel, to which it invited the Ministers, the Diplomatic Corps, and all the principal Egyptian and foreign notables. Over three hundred guests gathered to congratulate Mr. Enkiri and offer their good wishes for the continued success of his excellent journal, and a most pleasant afternoon was spent.

The British Chamber of Commerce.

The British Chamber of Commerce of Egypt resumed its monthly luncheons this week at the Continental Hotel, when some seventy members sat down under the chairmanship of Mr. R. C. Martin. In this number were several associate members, a class of member drawn from those who, not being of British nationality, are nevertheless interested in British products and industry. On their behalf Mr. Brandt, at the close of the speeches, expressed the appreciation of his colleagues of the facility afforded them to secure the assistance of the Chamber in the conduct of the business of representation of British manufacturers which they were carrying out.

In his address Mr. Martin dwelt on the extension of the Chamber during the past year, the membership figure—540 on January 1—being to-day just short of 700. He

explained the work of the Chamber and dwelt on the part it was playing in the question of the revised Customs tariff which, according to the information at his disposal, could not be ready by February 17, as from which date the Egyptian Government has denounced its commercial conventions. He informed the members that the Chamber had formed in England, mainly thanks to the efforts of the Secretary, Mr. Trimen, a Committee which has arranged to circulate, to the trades interested for their comment, the new proposals, as soon as the Government, in accordance with its promise, communicates them to the Chamber, which will then put forward the views of British trade on the question.

It was an interesting gathering by reason of the presence not only of the category of associate members referred to, but also of members from Alexandria and Port Said. As several remarked, this is a thing that was unthinkable four years ago when Alexandria and Cairo looked somewhat askance at each other's activities and rarely, if ever, collaborated on any question. The change in relations between the two communities, strikingly emphasised by the presence of these members from Alexandria and by the recent decision that henceforward the Chairmanship of the Chamber shall be held alternately for two years by Cairo and Alexandria, instead of always by the latter, is entirely due to Lord Lloyd, who, by the active interest he displayed in the affairs of the British community of Egypt's second capital and by his own personality, drew the two communities together and, before he laid down his duties, had the satisfaction of seeing them loyally and willingly collaborating for the general good of British interests, as they had never done before.

Ministry of Foreign Affairs.

It is with sincere regret that the news has been received of the retirement of Ibrahim Waguih Pasha from the Under-Secretaryship of the Ministry of Foreign Affairs. Everyone, however, has welcomed the advent to that post of Sherif Sabri Bey, the popular brother-in-law of King Fuad and son of the veteran Minister of Communications, Abdel Rehim Sabri Pasha. Waguih Pasha will be missed by all the members of the Diplomatic Corps, who during a long period have had ample opportunity of appreciating his sterling qualities, his tact, his knowledge of diplomatic usage and his patriotism. He has done as much as anyone to create friendly relations not only with foreign countries but also with Great Britain, and it was in acknowledgment of what he had done, while serving his country's immediate interests, to smooth over difficulties during an exceedingly delicate period, that recently the King conferred on him the K.B.E.

THE HIJAZ.

Jidda, November 30.

Najd and Kuwait.

An official *communiqué* was issued here a day or two ago giving a summary of the King's plans for the final uprooting of the rebel movement and of the troop movements which have resulted therefrom. A copy of the *communiqué* accompanies this letter and it will be seen therefrom that the coming operations will centre round the Kuwait frontier across which, more easily than across the Iraq border, the rebels will be able to escape temporarily from the chastisement awaiting them. It is interesting to know that their offer of submission on condition of pardon has been rejected by King Ibn Saoud, who pre-

sumably knows that he can never again trust their loyalty, and insists that they shall submit to trial by the religious Courts. Those Courts can only condemn them to death, though the King's prerogative of mercy would doubtless be used to commute the sentence.

The length of time taken by the King in preparing his campaign suggests that he is leaving nothing to chance, while it is rather policy than military necessity that has led him to making the punitive force representative of practically all the elements of the Najd population. The possibility of trouble with the Kuwait authorities has on several occasions been represented by him to the British Government and, still leaving nothing to chance and no loophole for criticism after the event, he addressed on November 15 to the British Government, through the British Agent at Jidda, a formal protest against the free use allowed to the Najd rebels of the territories of Kuwait both as a refuge against pursuit and as a supply base. Up to date no reply has been received to this message, but a somewhat painful impression has been created by the news, not yet confirmed, that the Shaikh of Kuwait has informed the British Agent at his Court that he is under no treaty obligations to refuse the right of asylum and supplies to those in open rebellion against the authority of the Wahhabi King.

This attitude is regarded as being in conflict with that part of an Article of the Treaty of Jidda which says: "Each of the high contracting parties undertakes . . . to endeavour by all the means at its disposal to prevent his territories being used as a base for unlawful activities directed against peace and tranquillity in the territories of the other party." Kuwait is, of course, technically not British territory, but is clearly treated as such in the Treaty, the sixth article of which provides that King Ibn Saoud shall "maintain friendly and peaceful relations with the territories of Kuwait and Bahrain. . . ." The

maintenance of friendly relations is obviously intended to be reciprocal, and the object of the Treaty of Jidda was to secure peace between all territories under British control and the territories of King Ibn Saoud.

The attitude of the Shaikh of Kuwait is liable to precipitate complications in the near future if it is not sharply checked by the British Government; and Shaikh Ahmad ibn Jabir would do well to be warned in time by the fate that overtook the Hijaz for very similar contumacy. If directly or indirectly the result of the complications now so probable should be to put an end to the anomaly of an independent status so prejudicial to the economic interests of Kuwait itself, Faisal al Duwish should be given the credit for the good resulting from the evil of his disloyalty.

Rains in the Hijaz.

The outstanding event in the recent history of the Hijaz is the rain which broke over the whole country on November 27. Reports from Madina, Al Ula, Yanbu and Wajh speak of torrential rains which have set all the Wadis in motion. The Wadi Fatima shared in the general good fortune, with the result that the road between Mecca and Jidda was closed to motor traffic for several hours until the flood had subsided. Mecca and its neighbourhood received the full benefit of the visitation, while at Jidda 2.27 inches of rain fell between 7 and 8 a.m., and the streets were rendered impassable by the lakes which soon formed in every hollow. The cisterns, already empty of last year's rain water, are now again nearly full, and the desert is ready for the seed that will be sown upon it of melons and millet. It may be we shall see no more rain this twelvemonth, though last year gave us 5.03 inches in all, but we have enough to go on with, and that is as much as we ever look for. It would seem that Jidda was on this occasion very nearly the most southerly point reached by the storm.

The Amir Faisal's Return.

After a stay of nearly a fortnight here the Amir Faisal returned to Mecca on November 28 with all the high officials of the Government whose presence at Jidda has helped materially in the disposal of many local problems demanding their personal attention, and that of the Amir himself. For the rest, much of the Amir's time was inevitably spent in attending the various banquets organised in his honour, while just before his departure he received the captain of the French sloop *Montmirail*, which arrived here on November 27 and left next day for Port Sudan.

General News.

The pilgrims continue to arrive steadily, and slowly the marked economic slump of the off-season is giving way to the prosperity that comes to the Hijaz with the overseas visitation. The Government here is not, however, blind to the fact that, to make prosperity perennial rather than seasonal, something must be done to develop the agricultural and other resources of the country. Great progress may yet be achieved on these lines, and the sincere wish of all and sundry is that the King may henceforth be able to devote his undivided attention to those problems, when he has finally settled accounts with those to whom the prosperity of the country counts for little in comparison with their own advantage.

It is reported, though the report still requires confirmation, that a signal victory has just been achieved by the King over the rebel force. No details are forthcoming except that the report emanates ultimately from Kuwait.

OPERATIONS IN ARABIA.

Jidda, November 27.

The following is a translation of an official *communiqué* which has been issued by the Foreign Office of the Hijaz-Najd Government:—

After the completion of his preparations for a punitive expedition against the rebels seeking to disturb the peace of Najd, His Majesty King Ibn Saoud issued orders for the advance of all his regular and tribal forces towards the frontier district, where the remnants of the rebels are encamped.

The preparations for the move having now been completed and the various forces having concentrated from every direction at the appointed rendezvous, the citizen forces have gone forward under the King's orders to take up a position at Shauki, while the Badawin and their like have been ordered to concentrate at various points; the Harb tribal contingent moved forward from Buraida on November 16, and the Ataiba force on the same day from Shaqra to Hafar al Ats, while the Qahtan have moved forward from the Nisah valley. The final concentration was to be at Shauki, whence the forces will start on the march towards the localities in which are the rebels above-mentioned.

In addition to the above disposition the Amir Abdul Aziz ibn Musaid (Governor of Hail) has taken up his position as directed at Shabiya, where he has been joined by the Shammar and Anaza contingents. The object of all these contingents is to encircle the rebels from all directions and to cut them off from all avenues of escape so that none of them may escape.

On the completion of these dispositions His Majesty marched out to the general rendezvous, where orders were issued for a move from Shauki on November 22; and during the absence of His Majesty on these operations H.R.H. the Amir Saoud remains as Viceroy at the capital.

As soon as the rebels realised the seriousness of their situation they sent messages to His Majesty offering submission; but His Majesty replied that their plea for pardon could not be entertained until they had submitted to trial according to the Sacred Law. And it is hoped that no long time will elapse before these punitive operations are brought to a successful conclusion.

GREECE.

Athens, December 8.

The Vardar Drainage Scheme.

On Monday, November 24, M. Venizelos left Athens for Salonika, in order to preside at the inauguration of the first completed stage of the great Vardar drainage scheme. The contract for this work, it will be remembered, was secured during the Pangalos régime by the Foundation Company. After a good many delays and a good deal of obstruction, the work is now progressing more quickly, and Tuesday's ceremony marked the opening of one of the three canals, which will carry off the waters of Lakes Ardzan and Amatovo into the Vardar. In view of the great importance of the work, a short summary of the programme which the Foundation Company are carrying out may be of interest.

In addition to the three canals already mentioned, of which the total length is 32 kilometres, subsidiary canals with a total length of 40 kilometres are also being dug. Several bridges have also been constructed to carry roads and the Salonika-Belgrade railway across the canals.

The second part of the programme, most of which has also been finished, consists in the rectification of the northern part of the bed of the Vardar, and this has involved the construction of a dyke on the left bank, 10 kilometres long with an average height of three metres.

By the third part of the scheme, for which the preliminary plans, surveys, etc., have been made and submitted to the Ministry of Communications, the southern part of the Vardar, i.e., in the immediate neighbourhood of the mouth, will be dealt with. Besides reclaiming the marshes, the object is to prevent the gradual silting up of the harbour of Salonika. The river brings down some 2,500 tons of silt an hour, and, according to expert calculation, the harbour entrance would be blocked in thirty years' time.

The programme further envisages the rectification of the beds of the Galliko and Haliakmon rivers, and the drainage of the Janitza lake (or rather swamp) by means of a canal from it to the sea. West of this canal, another canal will conduct the waters of numerous torrents (which now swell the waters of the lake in winter), into the river Haliakmon. This canal will be 35 kilometres long. Irrigation works in the plain of Salonika complete the programme.

It is stated that the work will be finished in 1934. This seems an optimistic estimate in view of the delays which have occurred hitherto, but, whenever the work is completed, the benefits will be incalculable; 500,000 stremmata (a stremma equals $\frac{1}{4}$ acre), will be reclaimed for agriculture, another 750,000 protected from inundation, while 850,000 stremmata will be irrigated. Above all, the tyranny of the mosquito will be ended in this region. In this connexion it is of interest that a school of malaria is being established, in connexion with the University, at Athens. Special courses will be given, and special laboratories set apart for the malaria-stricken regions. The director of the school is M. Kardamitis, well-known throughout Greece for his long and persistent efforts to combat this disease.

Urban Problems.

Like the Ulen Company, the Foundation Company has now weathered its period of greatest unpopularity, and may look forward to more peaceful times ahead. Not so the Power and Traction Company, whose popularity is now almost at its lowest ebb. The difficult transition from the old to the new current is now being effected. At the moment of writing, those places which have still the old current (now on its last legs)—and this means most of the houses and almost all the streets—are plunged in semi-darkness from 5 p.m. to 8 p.m.—the hours when the shops and offices are still open. To intensify the evils of urban life, the gas employees have been on strike, supported in rather half-hearted manner by the tram and bus employees. Less annoying for the ordinary citizen has

been an agitation among the students of the University, which has been accompanied by a certain amount of rioting, stone-throwing and damage to University property. As a result, lectures have been suspended, and the University is guarded by the military and fire brigade.

M. Venizelos and Pericles.

None of the strikers received much encouragement from the President of the Council, who explained quite frankly, if brutally, to the students the various ways in which they had placed themselves in the wrong, and forfeited any consideration they might have received. When one considers the saying and doings of M. Venizelos, one is, in fact, forcibly reminded of the description which Thucydides gives of another Greek statesman—the great Pericles. “He, deriving authority from his capacity and acknowledged worth, being also a man of transparent integrity, was able to control the multitude in a free spirit; he led them rather than was led by them: for, not seeking power by dishonest acts, he had no need to say pleasant things, but, on the strength of his own high character, could venture to oppose and even anger them. When he saw them unduly elated and arrogant, his words humbled and awed them: and when they were depressed by groundless fears, he sought to reanimate their confidence. Thus Athens, though still in name a democracy, was in fact ruled by her greatest citizen.”

Byzantine Studies.

The Byzantine Congress has been fixed to begin on October 30, 1930. The President of the Republic is President of the Congress. Excursions to Salonika, Mistra, and other places will form part of the programme, which is divided into three sections—historical, literary, and archæological respectively. The importance of Greece as a centre of Byzantine art and archæology is more and more being recognised, and Byzantine studies, too long neglected or overshadowed by the classical, are now coming into their own. Side by side with the awakened interest, is a growing desire to preserve Byzantine remains. Frankish and Venetian remains are, however, still inadequately protected.

Improvements at the Piræus.

On returning to Greece after an absence of several months one notices one very marked change for the better—the disappearance of the pirates of the Piræus, whose importunity and insubordination made landing such a nightmare in former times. Though the control of the porters is not yet perfect, the passage from ship, *via* the Customs, to a taxi is now comparatively smooth. Perhaps the helpful tout is rather too prominent, and might with advantage be abolished.

ROUMANIA.

Bucharest, December 11.

Parliament at Work.

Parliament continues its work and is very busy. The discussion of the Message from the Throne was concluded last Monday, when the reply was drawn up for presentation to the Regency in the course of this week. At the Wednesday sitting the Government submitted the Bill on the General Budget of the State and the

affiliated autonomous institutions (i.e., Railways and Post Office). At the same time M. Madgearu, Minister of Finance, announced his intention of submitting other Bills, namely: (a) the tax on turnover; (b) on Death Duties, which are at present too onerous and will be reduced by 25 per cent. or more; (c) on the application of direct taxation, destined to alleviate the Budget for this year pending the passing of the new Law which M. Madgearu is drawing up and which will introduce a radical reform of the system of direct taxation; (d) to prevent evasion of taxation a bill which, when passed into law, is expected to increase the State revenues by about a milliard lei.

At the end of last week M. Madgearu gave an interview to the Press for the purpose of explaining his Budget Bill. The Budget for 1930 shows a greater surplus than any of its predecessors for many years past. This surplus is obtained, in the first place, by means of important economies imposed upon all the Ministries, but principally by the effects of the new economic laws passed during the last parliamentary session. The method of collecting the taxes under the new Mining Law is also a source of considerable revenue to the State Treasury. All precautions have been taken to insure that the surplus will be maintained and, perhaps, even exceeded. Moreover, the Minister of Finance holds out reason for hoping that it will be possible to reduce the present rates of taxation.

Among the new Bills that are to come under discussion this session is one on Army Organisation and one for the modification of certain statutes of the State Railways.

In spite of pointed insinuations in a certain section of the Press, complete concord reigns among the members of the Government, all of whom support loyally both M. Maniu, President of the Council, and M. Mihalache, the leader of the Peasant Party.

Professor Yorga.

At a recent political meeting Professor Yorga made an interesting statement. After having passed a severe criticism on political parties generally, because they were apt to pursue purely political aims to the detriment of the interests of the State, he sketched the organisation of a party composed of an association of professional people standing outside political interests. The activity of this association would remain quite outside political parties and would often be directed against these. Professor Yorga announced his intention of inviting to a meeting all the persons qualified for membership of his proposed association for the purpose of explaining to them the details of his plan. This plan is already opposed in principle by almost all the existing political parties, which regard it as dangerous to them, as it would, no doubt, deprive them of some of their most thoughtful members or voters.

Teachers' Congress.

During the last few days a congress was held of the professional teachers of Roumania, at which the 70,000 members of the teaching profession, male and female, were represented. All the grievances of the profession were expressed in a memorandum to the Government. These related chiefly to the question of emoluments, which have not increased in proportion to the rise in the cost of living, and they touched also on matters relating to the social life of the teaching class. The members of the Congress were careful to point out that their meeting had no political basis, but was made with the aim of uniting the whole teaching corps. The Government admitted some of their claims and agreed to allocate a certain sum for the increase of salaries of certain categories that were suffering most under present conditions.

Economic Delegation of the Government.

From the economic point of view the Economic Delegation has already seen its labours crowned with some

success. In the first place, on the proposal of M. Mihalache, Minister of Agriculture, a reduction has been made of the State tax on salt fish from 100 to 12 lei. It may be explained that salt fish is the basis of the food of the peasants in Roumania, and this provision has immediately resulted in a reduction of the price of salt fish from 8 to 10 lei per kilogram. This in its turn has brought about a reduction in the price of fresh fish, which is regarded as a luxury.

There is another grave problem which the Economic Delegation has been called upon to solve, namely, that of the export policy for agricultural products and where markets for these should be sought. Although Roumanian agricultural products are of superior quality, they are little known on the markets of Europe. As a result of land expropriation and of the new economic conditions introduced by this measure, there was, perhaps, some deterioration in the quality of these products for a time, but they have now regained the first rank as in the past. It appears that M. Mihalache, Minister of Agriculture, in agreement with the aims of the Economic Delegation, has decided to seek means of reorganising the export system and at the same time will appoint agricultural Attachés abroad for the furthering of Roumania's international trade.

So far the agricultural prospects for next year are good. On December 1 the sowings had already exceeded those of 1928, and the finer weather continues, so that ploughing and sowing still proceed apace—a very unusual state of affairs at this late date. Although it is much too soon to build upon results, there is nothing to be lost by a little comforting optimism in the meantime, and perhaps the Fates will at last be good to Roumania and give her the bumper crop that her peasants richly deserve, for they certainly work hard enough—often even 18 hours a day during the busy season. There is no question of an 8 hours' day with them, especially since they have become the owners of the land.

Belgrade, December 12.

The Sofia Conference.

The tragic death of M. Shaponitch, President of the Yugoslav delegation to the joint Yugoslav-Bulgarian Commission, which met in Sofia to discuss the settlement of frontier problems, happening, as it did, just at the moment when agreement seemed probable, caused genuine sorrow in Sofia as well as in Belgrade. M. Shaponitch was attending a tea given by M. Karajoff, one of the members of the Bulgarian delegation, when he had a heart attack and the same night, despite the efforts of the best doctors of Sofia, he died. All who knew him, and especially foreign correspondents who found him, as Chief of the Press Bureau of the Ministry of Foreign Affairs, ever ready to help them, admired M. Shaponitch for his energy, kindness and good will. It was feared in diplomatic circles that this unfortunate incident might cause the prolonged postponement of negotiations, but I am informed that to-day, or at least to-morrow, the King will appoint a new President of the Yugoslav delegation, and that by the end of the week negotiations will be renewed. One of the most important questions to be solved, that of estates which are divided by the frontier line, has practically been decided in principle, and if the conference is continued in the spirit of good will and

conciliation which marked its earlier stages, the practical application of this principle should soon be worked out and a solution found also for the remaining frontier problem before the conference, that of the establishment of a neutral frontier zone from which all who have no legitimate business in the district, including komitajis on the one side and Bulgarian Agrarian refugees on the other, will be excluded. The Yugoslav Government was greatly impressed by the kindness shown on the occasion of the death of M. Shaponitch by the people and Government of Sofia, and this factor, together with the signs of dissent between the Italian and Bulgarian Governments, makes the possibility of agreement greater. Agreement on these two matters, while not solving the whole problem of Yugoslav-Bulgarian relations, would remove some of the greatest obstacles to the improvement of relations which have been repeatedly disturbed by frontier incidents in the past, and would be evidence of the desire for friendship, which is so much needed.

Union Day Celebrations.

December 1, the eleventh anniversary of the Day of Union of the South Slav peoples, was celebrated throughout the whole of Yugoslavia with much ceremony. King Alexander attended Mass in Belgrade Cathedral, accompanied by the Diplomatic Corps, representatives of the Army and Civil Service and great masses of citizens. It was to be noted that the streets of Belgrade were decorated with the new Yugoslav flags, instead of being hung mainly with Serbian flags, as was the case in former years. In great contrast to last year, when the official celebration of the Day of Union led to serious disorders in Zagreb, this year's ceremony seems to have aroused great enthusiasm among the citizens. Several thousand students, including delegations of students from all universities of the country, met in Zagreb on November 30 and took part in a great demonstration of national solidarity of the youth of the country. Both the Belgrade and Zagreb Press insisted that this was the first real day of union, the first day of a real Yugoslavia after ten years wasted in party strife. The only incident to mar the celebrations of the Day of Union this year was the discovery by the police of a bomb placed in the bandstand of a Zagreb Square near to which the procession of students coming from the station had to pass. Fortunately it failed to explode.

The King's Birthday.

On December 17, the anniversary of the birthday of King Alexander, deputations of citizens from all towns of the country will visit Belgrade to pay homage to him. This movement was begun in Zagreb, when a meeting of the City Council decided to send such a deputation and invited all the towns of Croatia to join them. The response was not restricted to Croatia, but within a short time almost every town in the country had decided to send its deputation. Gigantic preparations are being made in Belgrade to receive these numerous guests. As the number of deputations will be too great for all to be received on one day, it has been arranged that delegations from the various *Banovine* (Banats) will be received at intervals of a few days, from December 17 to January 6, the anniversary of the *coup d'état*.

New Laws.

The spate of legislation passed by the new Government shows no sign of abating yet. Acts which, although of admitted urgency and excellently drafted, would have taken years to pass through the old Parliament, owing to the bitterness and unreasonableness of the party struggle, are prepared by experts in a few months, passed by the signature of the King and the responsible Minister, and put into force by publication in the *Official Gazette*. Among the new laws so passed within the last week are the Elementary Schools Act, the Sokols Act, the Pure Wine Act, and an Act dealing with the Suppression of Insect Pests.

New Education Act.

The Elementary Schools Act has evidently been carefully drawn up by educational experts. It makes elementary education compulsory for all children and provides severe penalties in case parents or guardians withhold children from attendance at school. It is even provided that where parents or guardians are found to be unfit for their task the child may be taken away and handed over to some other family or to a State institution. In cases where great hardship would be caused by children attending school during certain seasonal agricultural work it is provided that arrangements may be made for the courses to be completed during the winter months. The Bans are made responsible for the provision of schools wherever at least thirty children of school age live within a four kilometre radius, and travelling schools are to be provided for sparsely populated districts. A fund to provide money for new school buildings has been established in Belgrade. Children must all complete eight years of schooling, but the last years may be devoted to special training. Provisions are made in the country districts for training in agricultural science and the theory of co-operation, and in the towns for training in arts and crafts and domestic science. A most modern system of play centres, elementary schools, craft and domestic training schools, and special schools for mentally and physically defective children is arranged for; with a view to suppressing illiteracy special evening schools for adults are to be provided, and attendance at these will be compulsory for all people under 25 years of age who did not attend school when children. Private schools already existing are subject to strict State inspection, and new private schools may not be opened. In districts where sufficient numbers of the children are of non-Yugoslav nationality, special schools will be established where the children will be taught in their mother tongue. Children may attend only schools in which their mother tongue is taught; thus, for example, a Hungarian child may not attend a German minority school. But children of other nationalities may attend Yugoslav schools if they choose. These minority schools are under State inspection and supported by the State, and their teachers must have the same qualifications as teachers in other schools and be qualified in the State language. The teaching of religion, which was formerly entrusted only to priests, may now, with the parents' consent, be carried on by lay teachers who are members of the same faith as that to which the children belong.

The Sokols Act unifies the organisation of gymnastic societies, formerly in the hands of various voluntary bodies, and provides for State control. The Heir to the Throne is appointed as Commander-in-Chief of the new Yugoslav Sokols Organisation.

BRITISH OFFICIALS IN IRAQ.

(Contributed.)

The following article, one of many which have recently appeared in the Iraq Press, displays a tone somewhat in discord with recent utterances in Parliament and Press in this country. It appeared in *Al Iraq*, one of the most moderate of the Iraq papers, and one which, though perhaps inspired by, is not compelled to write to the dictates of, a particular party. It is somewhat ironical that on the day of its appearance, there was also published Lord Passfield's statement in Parliament that, with the announcement of Great Britain's policy to recommend Iraq's admission to the League of Nations in 1932, the whole atmosphere in Iraq had changed and an atmosphere of suspicion had given place to one of kindness and co-operation, and one cannot but retain an uneasy thought

that the rosy hues of this statement were anticipatory rather than actual.

The article appeared in *Al Iraq* No. 2927, on November 27, and was addressed:—

TO

SIR KINAHAN CORNWALLIS AND ALL BRITISH OFFICIALS IN THE IRAQ GOVERNMENT.

Do you know, Sir, what the fallahs are saying in the diwans of their chiefs and the labourers in their coffee-shops and the middle and upper classes in their clubs and meetings and the schoolboys in their schools? We don't think you know. You are far from them in body, in spirit, and in thought. But the low worms who go between these meetings and you are too contemptible and beastly to tell you the truth. Don't trust these base creatures who come to you in the shadows and pretend to be loyal to you and in the light of day talk loudly of their patriotism. These traitors were the people in whom Sir A. T. Wilson trusted and who showed him the horizon clear and bright while it was really heavily overcast with clouds. It was they who closed the eyes and ears to the demands of the country and the chants of independence and to the national indignation with the despotic rule of 1919. The result was the insurrection and the British Government hastened to replace the young and unbending Wilson by the old and wise Cox. Then came a truce and peace followed by treaties and agreements and the establishment of an Iraq Government with Throne, Constitution, and Parliament. But everything had two faces, the inner and the outer. The outer was national rule with British guidance and the inner British rule with a make-believe of consultation with Iraq. The policy of the Conservatives was to deceive Iraq with this outward show and then to sap its blood and strength, physical and moral, by degrees until it remained weak and helpless, and then the real policy would have been revealed and the rule of Bombay and Delhi and Singapore imposed. Do you know, Gentlemen, what the Iraqis are saying about you? They say that the British Advisers and officials do not wish to recognise the revolution which has taken place by the coming into power of the Labour Government. They say that you are all Conservatives and Imperialists and that you don't like taking your orders from MacDonald and Company instead of from Baldwin and the aristocrats. You have ruled for eight years, and it is hard for you to bear now to see given the orders and to stand by and speak only when you are spoken to. You think the present Labour Government will soon go the way of the last and that then the Conservatives will come back and everything will be as before. Is not this true, *Hadhrat al Mustasharin*? The bullet which killed Abdul Muhsin and the letter which he left—"The nation demands service but the English don't agree"—is sufficient proof of what the people are saying. They say, too, that you demanded of the Saadun either that you should remain ruling as at present or that you should be paid at once the compensation stipulated in your contracts and your services dispensed with. This compensation amounts to three million rupees. Why all this excitement? Why can't you stay quietly advising when you are asked, being technical experts, and content not to interfere in the Government of the country? Why all this anger and haughtiness? Why did you entertain M. Martin, and why did you ask that high official to meet him, and what did they say to each other?

Who is the spy who went to you on the night of the tragedy and told you that the most faithful of the Ministers had altered the letter and you demanded an inquiry? Why should you interfere between the Iraq nation and the discharge of their duty to that sacred memory? All those in whom secretly you place your trust and confidence are either not Iraqis or those who do not really think of Iraq as their country, or else they are Iraqis utterly without honourable record.

You especially, Excellency Mr. Young, do you know what people say of you? They say that you stand for the principles of the late Sir Gilbert Clayton and are a true friend of the Arabs and their King, but that the British officials criticise your views and your policy which is on the side of Iraq and the Iraqis. The removal of Sir Gilbert Clayton from the political arena suited their book because they saw that he favoured to a great extent the desires of Iraq. They were afraid of him, too, because of his influence in London. But you, no doubt they have determined among themselves not to give you any chance to follow in his footsteps, and to obstruct everything which you may propose to further the Iraq national cause. No doubt they are determined in the same manner to intervene between you and Sir Francis Humphrys to prevent his being influenced by your ideas. Is not this all true? Who knows?

But what is true without doubt is that the British officials are not of the Labour Party. How could they be in sympathy with the principles of the Labour Party which will lead to their being deprived of the position, the power, and the dignity which they enjoy now?

Don't be alarmed, O British officials; we are prepared to find the price of liberty, to find the money for your compensation and your rewards and to add our thanks on top. We will do this, even if we have to sell up the old home. Everyone would give all he could find to see you going off back to your little island.

An infernal machine placed in a train running from Pirot to Belgrade exploded on December 17 when the train was near Chiflik. Three passengers were severely injured and three others less seriously. The line was not damaged, and the train was able to proceed, though it was three hours late. The Orient Express was one hour and forty minutes late owing to the incident.

Differences of opinion on such a measure are inevitable; criticism there must be, but nevertheless there is at the present time a strong and general desire for Church reunion; and it may not therefore be unreasonable to anticipate that the proposals will be well received. Undoubtedly the conditions in South India are such as are calculated to cause the wish for reunion to be very strong. The mission field is so vast that the various Churches have never been able to cover it completely. The prevention of anything in the way of over-lapping has consequently always been essential. The result is that an Indian convert in South India becomes, for example, a Wesleyan for the simple reason that he chances to live in a Wesleyan area, or a Presbyterian because he lives in a Presbyterian area and so on.

The continuance and perpetration of a system such as is above indicated is manifestly undesirable. For it means that Indian Christians who move from one part of the country to another find that there is a difference, which they cannot be expected to comprehend, in the worship and teaching of the Church. They have not sufficient knowledge of the history of the various denominations; and they are consequently discouraged by divisions which seem to them too closely to resemble the innumerable other divisions from which India suffers. A united Church, agreed on fundamentals, would overcome this difficulty, and it would also take from the antagonistic non-Christian his favourite argument against Christianity and Christians.

THOUGHTS ON INDIAN DISCONTENTS.*

This book is marked by Mr. Bevan's usual fairness and polished writing. It will appear, to the British realist, and even more to the impatient Indian politician, to be also marked by too great a degree of armchair philosophy. The author points out with perfect correctness that the grant of Dominion status in the same sense as it is enjoyed by Canada or Australia is equivalent to the entire withdrawal of India from the Empire, since the sentimental bonds which continue to unite the other Dominions will be absent. He doubts, again with much correctness, the ability of India to stand alone, if only on the ground of climatic conditions: and he advises the Young Indians to build up a new India by medical work, changes of the diets of the people, and, as it would appear, even by the institution of a new religion, which would appeal not merely to the peoples of India, but to the outside world.

All the foregoing, he observes, could be done while India was still under foreign domination: but he admits that the advice would be regarded as a mere design for diverting Indians from political agitation. There is also an unpractical touch in many of his opinions: such as his advice that all the children in India should be taught Sanskrit, and his somewhat touching belief in the efficacy of Royal Commissions. Incidentally, he is incorrect in ascribing the creation of the Commission on Agriculture, the practical results of which have yet to be seen, to the efforts of a Bengali Professor.

The weakest points in the book are, perhaps, the failure to envisage the problem of the Indian States, the only reference to which is an inadequate analogy with Northern Ireland: and the constant reference to India as a national entity. There is doubtless a growing national feeling, but it is so weak in comparison with disjunctive elements that a Federation of States is at least as probable as a single nation. The book is a pleasant one to read, but will hardly take us very far towards the solution of the Indian dilemma.

*"Thoughts on Indian Discontents." By Edwyn Bevan. (London: George Allen and Unwin. Price 6s.)

The King has approved the appointment, with effect from January 3, 1930, of Mr. Archibald Young Gipps Campbell, C.S.I., C.I.E., C.B.E., Indian Civil Service, to be a Member of the Executive Council of the Governor of Madras in succession to Sir Norman Edward Marjoribanks, K.C.I.E., C.S.I., Indian Civil Service.

AFTER MOTHER INDIA.*

There can be little doubt that Miss Mayo's "Mother India" has been as epoch-making as Mrs. Beecher-Stowe's "Uncle Tom's Cabin." The storm raised by Miss Mayo's book has scarcely abated: its repercussions are likely to continue, it may almost be said, through the centuries. It is well, thereafter, that the numerous attacks upon and applied to that book should be summarised and examined by one so well able to do so as Captain Field. He is admittedly a partisan of Miss Mayo, but his arguments and statements are well supported, and he may be said to establish his proposition that Miss Mayo's book emerges with its main fabric practically unimpaired from the storm of abuse and refutation that greeted its appearance. It is admitted by perhaps the most skilful of the book's antagonists that the resentment provoked by the book was not due to the truth or otherwise of its statements, but to the inferences reflecting on the Indian and particularly the Hindu race and religion. In other words, the supersensitiveness of the Hindus as a whole was deeply wounded.

Many European friends of India, accustomed to deal tenderly with this sensitiveness, were inclined to regret the severity of Miss Mayo's strictures, and her omission to mention the lighter, while stressing the darker, sides of Indian life and character. Maturer reflexion, however, must show that this was no part of Miss Mayo's task, any more than it would be of any other investigator of moral abuses. It was her object to prove that the abuses existed: not that in some places, and in many individual cases, there were alleviating circumstances. The best proof of the main truth of her strictures has been the resulting action in India. The most bitter of her opponents have admitted the necessity of reform: in spite of the opposition of such Hindu die-hards as some Bar Associations and the Marwaris, the age of consent has been raised by legal enactment, and a remarkably outspoken report on child marriage has been issued by the Joshi Committee.

It is safe to say that these results would have been impossible but for Miss Mayo's book. It is no longer seriously suggested that Miss Mayo was a propagandist hired to malign India by a satanic Government. Perhaps the sorriest figure in the controversy has been cut, not by the Indian, wounded in their most sensitive regions by an attack which they knew to be too well founded, but by that section of the Christian Missionaries who, though they were at least as well aware of the truth of the book, joined, from various motives, in the attack upon it. The best course would now be to allow the book, its useful object largely attained, to sink into the background and for all parties to join in the reform of the evils, such as temple prostitution and untouchability, which are yet unaffected even by Miss Mayo's attack upon them.

*"After Mother India." By H. H. Field. (London: Jonathan Cape. 7s. 6d.)

INDUSTRIAL DISPUTES IN 1929.

During the quarter ended September 30, 1929, there were thirty-eight particular disputes in India, of which seven were in progress at the beginning of the quarter. Four of these disputes were successful, seven were partially successful, and twenty-two were unsuccessful, while five were in progress at the end of the period. One of the successful disputes was that over wages in the jute mills of Bengal, involving 272,000 men and a loss of 2,896,000 days.

Other important disputes included twenty in the cotton mill industry, involving 133,350 men and a loss of 3,075,197 days. Of these twenty cotton mill disputes all but two were settled before the end of the quarter, fourteen were unsuccessful, three were partially successful, and one was unsuccessful. The disputes in other areas and districts were negligible, as the total figures for the whole of India were only 417,790 men and a loss of 6,202,810 days.

It is understood, according to Reuter's Bombay correspondent, that a contract has been signed between the Government of India and Eastern Airways, Ltd., for the extension of the England-India air mail service from Karachi to Bombay. In the absence of a properly equipped aerodrome at Bombay, seaplanes will for the present be used on the service, which is expected to begin at the end of January. The report so far lacks official confirmation.

INDIAN NOTES.

(Continued from page 702.)

Europeans are anxious to have the constitution working. And we therefore find it difficult to believe that they will withhold support from the new ministry, if it has the confidence of a considerable body of the Indian members, and if it sets about its work in a business-like way. In any case it seems to us that Sir Stanley Jackson is right in his determination to try to work the constitution and not to propose its suspension. A new Council has been elected, and it ought certainly to have an opportunity of exercising its constitutional rights. If the new ministry fails, then of course there may be no alternative but to retransfer the transferred departments and to administer the province without the aid of ministers.

The Indian Coastal Trade.

It is satisfactory to learn that the question of the Indian coastal trade is to be discussed under the auspices of the Viceroy in a friendly and informal manner. Such discussion will not, we fear, be assisted by the pamphlet recently issued by the Federation of Indian Chambers of Commerce, nominally as a counterblast to a circular letter issued by the European Associated Chambers. The Coastal Traffic Reservation Bill is justified in this pamphlet, which was summarised in a recent issue, on two grounds, the example of other countries in dealing with coastal trade, and the report of the Indian Mercantile Committee. As regards the first, the circumstances of India are entirely different from those of other countries. The interport traffic has been built up by the British companies established in India, and the *swadeshi* companies have signally failed to show that they can meet the requirements of the trade, both for goods and passengers. Without an efficient carrying trade, the coastal regions in India must be cut off to a far greater extent than in other countries, where rail and road communication is more feasible. As regards the Mercantile Committee's Report, the only member of it with any inside knowledge dissented from the findings on the question of coastal trade. Even these findings, however, recognised that the ideal of Indian management, crews, and capital were for the present incapable of practical realisation. Their much milder recommendation was that "after a time" the ownership and control of the coastal shipping should be predominantly Indian. As is usual in the case of Indian reforms all that is stated to be ultimately and conditionally desirable is demanded immediately, without any condition whatever. Even the pamphlet, moreover, finds it somewhat difficult to reconcile the proposals of the Bill with the passage in the Nehru Report, "it is inconceivable that there can be any discriminating legislation again any community doing business lawfully in India." The pamphlet makes the not unusual but none the less vague reference to the past of India before the advent of the English. There is, however, exact historical knowledge regarding the coastal trade. It is well known that it was harried by pirates from Chittagong to the Persian Gulf till these were extirpated by the English, and that the trade was entirely in the hands of the Mussalman Arabs till these were ousted by the ships of European nations. An indigenous Indian coastal trade never existed, and can only be reared by the most careful of measures. The pamphlet is signed by the President of the Federation, Mr. G. D. Birla, the head of the Birla Cotton Mills of Delhi. This is the gentleman who, at the recent Maharashtra Commercial Conference, warned the Indian commercial interests of Bombay against any form of Imperial Preference. Like other Indian politicians he is anxious for all the advantages of Dominion Status, without any idea of the obligations therein involved. If these be the leaders of India, there is small hope of the Indo-British Federation of Provinces and States, for which the most thoughtful, in India no less than in England, hope.

THE INDIAN STATES AND THE COMING CONFERENCE.

The great importance of the part which the Indian States are destined to play in the future of the British connexion with India was again emphasised in an address delivered by Professor L. F. Rushbrook Williams to the members of the Constitutional Club on December 18.

In the course of his paper the lecturer said that India was the land of tradition, and that of many of the Indian native States dated back to far beyond the claims of history. Seven out of every ten inhabitants of British India recognised with pride their hereditary allegiance to one or other of the States, from which also were recruited an overwhelming proportion of the native fighting forces in India. The general success of the policy which had been pursued in regard to the States, while open to criticism in some minor points, was, he claimed, well exemplified by the attachment which the Princes had displayed towards British rule in every crisis which had confronted the Empire. Even in the dark days of the Mutiny the States had loyally honoured the treaty bond that joined them to the King Emperor.

The influence of the States was always exerted in the direction of stability and ordered progress. The value of their contribution to the forthcoming Round Table Conference, in his view, lay largely in that fact and the knowledge that we could rely upon them to throw all their weight on the side of right and justice. After pointing out that the States were slowly but surely liberalising their institutions in deference to Western ideas of efficiency and good administration, Professor Rushbrook Williams said that their government was stable and prosperous. They were one and all devotedly attached to the Empire and at any time could therefore constitute a valuable bridge in the relations between British India and the Home Government. The undeveloped wealth in the 600,000 square miles of territory under their control was another valuable asset. And above all, he concluded, the Indian Princes had always played the game.

THE SOUTH INDIAN CHURCHES.

(From a Correspondent.)

The South Indian Church movement, to which much attention is being attracted, is a scheme the object of which is the union of the Anglican Church of South India, the United Church of South India and the Wesleyan Church. Union has been under discussion in South India for many years, the first practical step towards it having been taken as far back as 1908 when the United Church was formed by the amalgamation of the churches connected with five British and American missionary societies, both Congregationalists and Presbyterian.

Approximately three quarters of a million Indian Christians will be affected by the present proposals. For the Anglican Church in South India has nearly 396,000 members, the South Indian United Church has upwards of 231,000 members, and the Wesleyan Church has nearly 112,000. The suggested basis of union is the common acceptance by the three contracting Churches of (a) the Bible; (b) the Apostles' and Nicene Creeds; (c) the Sacraments of Baptism and the Lord's Supper; and (d) the Episcopate. The proposals, which have been framed by a Joint Committee after discussions and consultations extending over more than ten years, have been embodied in a report which is being submitted separately to the three Churches. The General Assembly of the United Church considered this report at a recent meeting at Bangalore, when it accepted the proposals subject to certain modifications in detail. The Anglican Church and the Wesleyan Church have still to give their judgment; and thereafter the scheme will be reviewed by the Lambeth Conference which will meet in July next.

THE WEEK AT HOME

London, Friday Morning.

"Nunc Gaudet Ecclesia."

Now make we merry, all and some,
For Christmas now is come

That hath no peer.

Sing we all in fere.

Now joy and bliss

They shall not miss

That make good cheer.

Even the most pagan of us, though he have to write in the week before Christmas, must feel the anticipatory warmth of the embers of Yuletide. Possibly, indeed, the most pagan in North-Western Europe experience most keenly the jollity and good cheer of this generous time: there is something in the comradeship and celebration which stretches back over dim centuries, to the time when Christianity was unknown in these islands. In Scandinavia, I believe, the pagan element in Christmas, though not outstripping the consecrated Christian element, is even more vital than in England.

But it is, of course, still the day of glory and rejoicing in the Christian sense. *Salvator mundi natus est.* And everywhere, in town and village, children will be accompanying their fathers and mothers to Church on Christmas morning, with the sparkle of joy in their faces and something of the *mirabile misterium* in their hearts. It is, indeed, a "blessed time."

To all my readers, therefore, and to all my non-readers (except knaves and the miserly), for the matter of that, I wish a very merry Christmas, and that in the New Year "all things shall prosper well."

Christmas Crowds.

As one elbows one's way through the massed crowd in, say, Oxford Street, Regent Street, or Cheapside, the noise made by the crashes, actual or impending or threatened, of great financiers in the City, seems very remote. No lack of prosperity here, would be the unfailing observation of the stranger watching the vast number of all sorts of people going in and out of the shops in their search for Christmas presents. Perhaps one is wrong, but there do seem to be in the streets of London at this time an even greater number of people than usual, whether it is young ladies gasping out "But how exquisite!" at Debenhams

and Freebody's, or schoolboys chortling with delight at the topping toys at Gamage's, or puzzled men wondering what the deuce to give to their "in-laws" or remoter relations.

In any case, everybody is very hearty and conciliatory about all the jostling: the only person I have seen really to lose her temper was a sweet young shop assistant who failed after minutes of the most correct form of suasion to convince a middle-aged woman of uncertain resolve that she wanted anything at all.

One of the minor attractions in London—it is a unique occasion—is the row of pedlars who are allowed at this period of the year to stand on the kerb in High Holborn selling all kinds of mechanical devices (made mostly in Germany, I fear) which are anything from two shillings to twopence. They appear to do a roaring trade—which is just as well, for they will not pass that way again until next Christmas-tide.

Political Discontents.

Political matters seem ridiculously unimportant at such a festive time as this, but to at least one section of the community—the Conservatives—it is to be hoped that Christmas will bring a more cheerful spirit. An old and acute observer of Parliamentary debates—he is also a Conservative—told me the other day that he had never known an Opposition so depressing and so resigned as the present Opposition appears to be. The Conservatives, of course, know this, and their mood at the moment is one of "insipidated gloom."

Of ideas they show no trace, of keenness no trace, even of a conception of their Parliamentary obligations no trace. There have been at least two recent divisions when the Government might have been outvoted, but it was saved by the absenteeism of the Conservatives. What is wrong with the Party? Everyone is asking the question.

The other day the organisation of Tory canvassers met in solemn conclave in Caxton Hall to discuss the problem. One of their main difficulties was discovered to be—snobbery. Of course this is a difficulty, but it is one which exists in every party. Investigation will have to go deeper than this. As it is, the situation is too lamentable for words. A hostile but not unkindly critic has just said, concerning the snobbery with which the Party is said to be infected from top to bottom:—"Almost anything seems true to the Conservatives in their present introspective mood. Something will have to be done soon, if only on grounds of humanity, in the general cause of cheering them up."

The Cecil.

"We knew it was coming, but we didn't think it was going to be so soon," as a defeated American President certainly never remarked. Similarly of the Hotel Cecil: we knew its fate was sealed, but did not dream that definite news of its passing would be heard before the end of the year.

The other day, however, the Shell Mex Company bought the Hotel for a million and a half pounds, and though a restaurant is to continue in the building, the main part will become, what many other hotels not in the West End—such as De Keyser's or the Holborn Viaduct—have become: business offices.

The Strand has perhaps changed more than any other street since the War. Not in the literal sense, of course. Nash's Regent Street, I suppose, is the most transformed in the material sense of all London streets. But at the time when the Cecil was built it was in the centre of West London's pleasures. And even a short time before the War it was possible to sing with a certain convincingness, "Let's all go down the Strand." Nowadays one goes down to Strand only to get the tube at Trafalgar Square or up it to Fleet Street. Soon there will be scarcely an hotel or tavern left in the Strand, for hostleries in the City are, quite simply, unable to stand the onslaught of banks, business houses, and tea-shops.

PERSONAL AND GENERAL

TO-DAY

December 26, 1929 (New Style).

December 13, 1929 (Old Style).

Rajab 24, 1348 A.H., of the Muslim Calendar.

Kislev 24, 5690, of the Jewish Calendar.

Lord Rathdonnel sailed in the P. and O. s.s. Ranchi from Tilbury for Port Said on December 20.

Viscount Erleigh arrived in London on December 24 from Palestine.

The Earl of Inchcape left London on December 12 for the Continent, to join the Countess of Inchcape.

Sir George and the Hon. Lady Barstow have left London for Persia on a visit of about six weeks' duration.

Lord and Lady Hawke left Belgrave Square on December 20 for Marseilles, joining the Maloja, for Calcutta, and will be away until April.

The Right Hon. Sir George Clerk (his Majesty's Ambassador Extraordinary and Plenipotentiary in Turkey) had an audience of the King at Buckingham Palace on December 18.

M. Buroff, Bulgarian Minister of Foreign Affairs, and M. Moloff, Bulgarian Minister of Finance, arrived in London on December 17. They were met at Victoria Station by Mr. J. B. Monck, of the Foreign Office, on behalf of the Secretary of State for Foreign Affairs. The Ministers visited Mr. Henderson at the Foreign Office on December 18, and later had an interview with Mr. Snowden at the Treasury. On December 20 they met the Prime Minister at the House of Commons, and left later in the day for Paris and The Hague.

The following are among the appointments to the Colonial Services which have been made by the Secretary of State for the Colonies:—

Iraq.—Major W. C. Stubbs, D.S.O., M.C., to be Inspector of Medical Services, Iraq Army; Major E. G. Turner, D.S.O., to be Inspector, Veterinary Services, Iraq Army; Mr. E. Holmes, M.B., Ch.B., F.R.C.S., to be Medical Officer.

Cyprus.—Mr. H. L. D. Gee, to be Chief Warden; Miss J. E. Crowe, to be Nursing Sister.

Palestine.—Mr. T. J. Roberts, to be Telegraph Superintendent, Posts and Telegraphs Department.

To celebrate the birthday of King Alexander of Yugoslavia, a service was held at the Russian (St. Philip's) Church, 188, Buckingham Palace Road, S.W., at noon on December 17.

In the afternoon the Yugoslav Minister held a reception at the Legation. Those present included the Czechoslovak Minister and Mme. Masaryk, the Countess of Leitrim, Annie Viscountess Cowdray, Lady Abinger, Sir John Sandeman Allen, Sir Edward and Lady Boyle, the Dowager Lady Boyle, Sir Martin Conway, Sir Charles Des Graz, Sir Arthur Evans, Lady Gooch, Sir Bernard Pares, Sir Hilton and Lady Young, Colonel A. T. Atherton, Colonel and Mrs. Crossfield, Canon J. A. Douglas, Canon Jackman, Colonel and Mrs. Luxmore, Dame Louise McIlroy, Mr. Wickham Steed, Mrs. St. Clair Stobart, Mr. A. Taylor, and the Bishop of Guildford, and Mrs. Carrington Wilde.

After having formally resigned, the Greek Government was sworn in on December 16 in the presence of M. Zaimis, the newly-elected President. The only change in the Cabinet, resulting from the resignation of M. Gonatas and his appointment as Governor-General of Macedonia, is that M. Karapanagiotis, formerly Under-Secretary of Communications, becomes Minister of Communications. M. Avraam has been appointed Under-Secretary in place of M. Karapanagiotis.

BRITISH SCHOOL OF ARCHÆOLOGY IN IRAQ.

The Appeal Fund of the British School of Archaeology in Iraq (Gertrude Bell Memorial) has now reached approximately £8,200—apart from Gertrude Bell's legacy of £6,000. Among recent donors are Dr. H. S. Wellcome (£1,000 payable by ten yearly instalments), Mr. James H. Hyde (£100), the Eastern Bank (£50), Mrs. J. Yates Thompson (£50), Mr. Walter H. L. Shadwell (£50), and the Archbishop of Canterbury (£10).

NEWS IN BRIEF.

Mr. C. M. Palaret, the new British Minister to Roumania, presented his credentials to the Regent on December 17.

Mr. Alban Musgrave Thomas (Puisne Judge, Trinidad) has been appointed a Puisne Judge of the Supreme Court of Cyprus.

Sentences amounting in the aggregate to 331 years have been imposed at Sofia on fifty-two Bulgarian Communists on charges of seeking to form a Communist party.

A draft law was lodged in the Greek Chamber on December 18, whereby Admiral Konduriotis, the former President, is granted an annual pension of 500,000 drachmæ (£1,335).

Masked bandits concealed themselves on board an express train as it was leaving Bucharest station on December 18. They emerged as the train was passing Ploeshiti. The guard at once pulled the communication cord, but the bandits managed to escape.

Book Reviews

THE INFLUENCE OF THE DANUBE ON WESTERN CIVILISATION.

"THE DANUBE IN PREHISTORY." By V. Gordon Childe. Illustrations and Maps. (The Clarendon Press. £2 2s. net.)

It cannot be said that much has yet been done in the way of scientific field-work to investigate the prehistory of the Danubian basin. So far palaeological examination has been restricted to a very limited number of sites, and large areas are still untouched. Still, much information has already been acquired and is to be found stored in museums all over the area and in articles in numerous technical journals in various tongues. There has, however, been no thorough guide to show us the way through this mass of miscellaneous material, and no real attempt has yet been made to summarise the facts available or to indicate what conclusions may, provisionally, be drawn from them, as also the lines on which further investigation should proceed in the hope of filling in gaps and finding firmer ground.

This is the task which Professor Childe has set himself. It has evidently involved a prodigious amount of reading and of careful examination of the contents of very many museums. As his subject ranges from palaeolithic times to the Scythian invasion, we may well admire the skill with which he has managed to bring all his matter into the comparatively small space of some 400 of his fine big pages and has, at the same time, made these pages interesting even to the ordinary cultured layman. His task has been made easier by his fine selection of illustrative matter from museums and by the liberality of the Clarendon Press in allowing a wholly praiseworthy profusion in the way of pictures. The text well deserves this liberal treatment, for we now have a firm foothold from which to advance further with our eyes open, and it is altogether a matter of congratulation that this necessary work should have been done in so thorough, authoritative and satisfactory manner. Indeed, the only point that we have been able to discover is the occasional occurrence of wrong references to the illustrations.

The main theme of the book is the advance of an Eastern Mediterranean or Ægean civilisation in early Neolithic times up the Danube Valley, gradually finding its way down other valleys adjacent to the Danube and finally penetrating westward into Holland, Belgium and even Britain and southward to Thessaly, Switzerland and Italy. This advance took place at a time when the climatic conditions of Central Europe had caused the disappearance of all but a few human survivals from epipalaeolithic times. These remained in the shape of some scattered families of hunters who, however, with their more numerous brethren in the North, exercised an important influence in gradually modifying the culture of the intruders. We are shown how these invaders were able to make their way along the large areas of loess which constituted the only possible road through the vast area of impenetrable forest which then covered the area. We follow their progress as the climate gradually changed, thinning the forest and opening new ways. We appreciate the local resources of the districts chiefly occupied and understand why it was that, with local supplies of tin, antimony and copper, the use of bronze, too, came to us from the Danube. We have glimpses of trade relations between this people and Troy as well as with the Baltic. We get faint glimpses, for we shall not see clearly till much more fieldwork has been done, of the passage of peoples who may be Achæan, Dorian, Latin, and other tribes on their way to the Southern Peninsulas. Finally we come to the great flood of invasion into our area from the North and from Southern Russia till, with Scythians in the East and constant raids on their part on the lands of Hungary, we reach the Iron Age and near the dawn of historical times.

These are but paltry indications of the wealth of matter

contained in his book, and of its richly detailed discussions on the shape and decoration of stone tools, pottery, bronze vessels, pins, knives, daggers, swords, and so forth, it is unfortunately impossible to give any idea in the space at our disposal. But we trust that we have at least been able to give some hint of its importance and interest even to the average reader. As for students of the subject, they owe Professor Childe a debt which they are not likely to underestimate.

C. S-W.

THE "DREIKAISERBUND."

"THE SABUROV MEMOIRS." Translated and edited by J. Y. Simpson. (Cambridge University Press. 15s. net.)

Peter Alexandrovitch Saburov was the ambassador selected by the Tsar Alexander II. to pursue at Berlin his new policy of close understanding with Prussia, a policy which the ambassador himself had very much at heart. His exertions led to the successful accomplishment in 1881 of the famous secret League between the Emperors of Russia, Germany and Austria which remained in force till 1887. As he took a leading part in the negotiations, his careful and detailed account of them, which he compiled for private circulation just before the Great War broke out, is of the greatest interest for the study of the relations between the three countries and their neighbours at the time.

It reads now curiously like very ancient history. These discussions between Ministers representing not their "august masters," kept so rigidly secret and conducted with the greatest and apparent frankness combined with entire distrust of the others' motives, a distrust entirely justified, make queer reading nowadays, and help one to realise how far Europe has travelled in the last fifty years. Saburov served his Emperor well, but he had no easy task in trying to keep level with Bismarck. The reader of the present day has no difficulty in seeing how cleverly and surely "ce tigre de Bismarck" not only got his own way but, when it suited him, also made the initiative come from the Russian side. Without the help of Saburov, it may be doubted whether the very unwilling Austrians would ever have been induced to enter into the League. Without Bismarck's lead it is quite certain that the League would never have come into existence.

To readers of THE NEAR EAST AND INDIA it will be specially interesting to note the cynical want of any pretence that the welfare of the Balkan States would have been of interest to Russia, if their existence and the Pan-Slav feeling among the nations had not made them of the greatest use in keeping open the way of Russia to Constantinople and the Straits.

How difficult it is for the most astute statesmen to prophesy is shown by a remark of Bismarck's that "Italy is of no account as a Great Power. There are countries extinct like certain heavenly bodies, which do not return to life a second time." Bismarck had clearly no premonition of Signor Mussolini. Saburov did better when he said to Bismarck: "It is a very possible situation that England ranges herself on the side of France, if, for example, on strategic grounds you violate the neutrality of Belgium. Italy, also, can become the ally of France." And that was thirty-four years before these actual events took place.

WOMEN IN MODERN INDIA.

"WOMEN IN MODERN INDIA." Edited by Evelyn Gedge and Mithan Chokol. (Bombay: Taraporevala. Rs. 4, or 7s. 6d. net.)

This little book has an interest and value far exceeding its modest size. It is made up of fifteen papers by Indian ladies, which cover almost every aspect of modern education, and many branches of social service and domestic science. At first reading, one may feel some pleasurable surprise that Indian women have already advanced so far as to be able to produce a book which

indicates such solid progress. A more considered opinion will realize how few are the women who have yet been reached, and how vast are the difficulties. There is a rather frothy initial chapter on the status of women in India, which seeks to suggest that all was lovely in the condition of women in Vedic and even in mediæval times: that, owing to foreign invasion, there has been a rapid decline in India in the last hundred years, and consequently a deterioration in the position of women. The other writers, however, write more sensibly and recognise that the most serious restrictions on the women of India are those imposed by tradition and custom, and, in the case of the Hindus, by ancient law. It is recognised that by Hindu Law women were mere dependents, "absolutely without independent rights"; a much less favourable position than that accorded by Muhammadan law. We observe that the disastrous purdah system is as usual ascribed to the Muhammadans, though it is no part of Islamic Law, and seems to have been observed in the Rajput families before the first Muhammadan invasion. Interesting as the chapters on education are, the most solid papers, perhaps, are those contributed by Dr. Hilda Lazarus on women's Medical work, and by Mrs. Hamid Ali on Maternity and Welfare work, the latter especially being founded on practical experience in the districts. As one writer truly observes, the interest of Indian women in rather violent politics is a passing phase. Their real duty, as well as their opportunity, is to lead in social reform, and especially in domestic amelioration. The book, apart from its intrinsic merits, has a most praiseworthy object: that of assisting the excellent University Settlement for Women in Bombay, which fully deserves all the help that can be given it.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PERSIAN AND AFGHAN CONSULAR REPRESENTATIVES IN THE EAST.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your sympathetic leader on the "New Régime" in Afghanistan, in your issue of October 31, encourages me to make an observation or two, for which I hope you will make room in THE NEAR EAST AND INDIA. We see from the telegrams that Afghanistan is setting its house in order. Whether the latent coolness between Amir Nadir Khan and Amanullah Khan will eventually result in mutual reconciliation, is a question the solution of which needs no outside influence. Our (Indian) interest centres on peace in Afghanistan. Our solicitude is for a strong, independent and self-developing neighbour.

There is, apparently, I do not say evidently, no love lost between the British and the Afghan authorities. The five years that the new Amir has stayed in Paris have naturally gone to strengthening what leaning he had towards the French, whose language he speaks with fluency and whose institutions he admires. Education used to be partly in the hands of the French in Kabul in the previous régime and the archæological survey is still left exclusively to French experts. Such a number of Afghans have returned from Paris that I should not be surprised, if French officers now entirely supplant the Germans, who used to be, if anything, in the ascendant under King Amanullah. It has been an open secret that Afghanistan needs financial help; none of Amir Nadir Khan's projects will come to fruition without money. We know that some merchants like those from Tashkent and elsewhere have made personal offerings to the new Amir. They do not surprise us and we have no reason to attribute them wholly to the very sound propaganda in which Nadir Khan has placed his trust. Would it be too much,

therefore, to ask, and ask through you, since the Afghans are now quite satisfied about the inexorable neutrality of the British and Indian Governments, whether it is in the interests of the country to continue salaried Consulates? For money saved is money got. I have the figures, but do not feel fully justified in placing them before the public, to show the cost of what patriotic Afghans must call white elephants. I emphasise the point for another and more important reason. The case of Persia is exactly parallel with Afghanistan in this respect. Persia is comparatively much richer, but her trade with India does not far exceed our trade with Afghanistan. Is there any reason why Riza Shah, who is above unsubstantial demonstrations and the vanity of pomp, should spend large sums of money for maintaining three Consulates in India? How much the stipendiary Consul-General in Delhi or Simla, the one in Bombay, and the assistant one in Karachi, cost in aggregate is not quite a secret, though not generally known. At the very least, the Persian and the Afghan Governments, especially the former, could yearly save Rs.40,000, if they reverted to the former arrangement by which Honorary Consuls conducted all the business that the highly paid functionaries are now expected to discharge. I should be sorry if my observations are taken as a personal reflexion on anybody. But they are never meant to do so. The present incumbents are not at all known to me. But I have heard from reliable sources sufficiently about them to believe that their capabilities could be more usefully employed elsewhere. It is patent that it is impossible for functionaries freshly coming from Teheran or Kabul to get acquainted with the local "ropes" at once. None of them knows well the English language, or even one of the principal vernaculars of India. Few come equipped with that knowledge of international and local laws which is so essential, and fewer come with an acquaintance with the principal Persian and Afghan subjects resident in India. They are fish out of water in Simla, Calcutta, Bombay or Karachi. I hope to speak in detail on the disabilities under which these officers new to India labour on a future occasion. To-day I want to solicit attention of the Governments concerned to the financial gain which both Persia and Afghanistan stand to make, if they did away with the costly stipendiary Consulates, finding more congenial occupations for them nearer home, and reverted to the old procedure of the Honorary Representatives. Although I am sure that there will be always public spirited Persians, one of whom was the most successful Consul at Karachi, to come forward and manage a Consulate out of patriotic motives, in view of the prestige which the Oriental States desire to keep up. The latter may give a monthly allowance to cultured Persians and Afghan gentlemen who represent their countries out here for out-of-pocket expenses. From very minute experience I would make bold to urge that both Persia and Afghanistan would do well to abolish paid Consulates throughout the East, including Syria, Palestine, Iraq, China and Japan, for in all these countries qualified persons to be Honorary Consuls are always available. The cities which have no such men are not worth a Consulate. It would be to their own advantage, if a beginning is made with India. If our Eastern neighbours need a precedent, they have more than one in some of the advanced Sovereign States of Europe and America, which have only Honorary Consuls in British India. We have only to think of Bombay when Mr. Mirza Ali Mahomed Khan (now the honourable Justice Mirza) was Honorary Persian Consul, to be satisfied that both Afghanistan and Persia can be efficiently represented at least in India with considerable saving in State Revenue. —I am, etc.,

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

[Owing to the Christmas Holidays this issue of the
NEAR EAST AND INDIA has had to be printed on
December 21.]

The New Egyptian Tariff.

The Egyptian Government undertook to give details of the new tariff in time to enable the Chambers of Commerce in Egypt to examine the changes and make comments on them, and the particulars of the tariff have accordingly now been published. The alterations, broadly speaking, follow the lines expected. There have been two main objects in framing the new tariff—the stimulation of native industries and the provision of an additional source of revenue. Home industries are to be assisted by the reduction of duties on raw materials, machinery, and coal, and by the abolition of export duties, except on cotton, cotton seed, eggs, and skins. The Government has the right under the new law to impose retaliating duties in the case of Egyptian exports which are penalised by other countries and as regards imported commodities which are subsidised. Where *ad valorem* duties are imposed the maximum level is 15 per cent. as compared with the previous 8 per cent. If there are any points in the tariff to which particular exception is taken by the foreign community there will now be ample opportunity to make adequate representations on the subject, and the evidence that the Government has provided of its willingness to meet the wishes of the trading community makes it clear that they will be given the most careful consideration.

Land Reclamation in Greece.

Rather over a year ago the Greek Government awarded to Messrs. Henry Boot and Sons, Ltd., of Sheffield and London, an important contract for reclamation and irrigation works in Thessaly and Epirus. The actual ratification of contracts is a process which takes time, and it was only last week that the signature of the agreement took place. In view of the urgent need for this scheme it is to be regretted that the Greek authorities could not see their way to expedite matters, for the survey, which, it is understood, will be begun next month under the supervision of Sir Murdoch Macdonald, cannot be completed in much under two years, so that much valuable time has been lost unnecessarily. The reclamation and irrigation works form part of the Government's scheme for the settlement of the repatriated Greeks from Asia Minor, and their vast nature may be gathered from the fact that large areas in Thessaly and Epirus are to be drained, and that the necessary operations will include the construction of a seven mile tunnel. The completion of the works will mean the addition to Greek agriculture of extensive areas of the most fertile land on which it will be possible to grow grain crops, tobacco and cotton. Greece's primary need is a very substantial increase in

the production of wheat to save her from being compelled to import large amounts of this commodity each year, and it would probably be to her lasting interest if a policy were pursued of concentrating on grain crops in the new lands for the present.

The Building Trade in Palestine.

Some trades respond far more readily than others to the economic conditions of a region, and are thus indicative to some extent of the position during a given period. The building industry comes under this heading, as it is particularly susceptible to good times or the reverse. The figures of building operations in Palestine in 1928 have recently been issued, and, as might be expected, they show a considerable falling off in activity as compared with previous years, thus reflecting the long-drawn-out depression from which Palestine has been suffering. Actually the amount invested in buildings in 1928 was £P702,462 as against £P770,064 for 1927, £P1,140,965 for 1926 and £P2,058,705 for 1925. It will be seen from these figures that there was a rapid decline in the industry over the four years, but it would be a mistake to draw too unfavourable deductions from that fact. In the period of development after the War there was an outburst of building activity, and it was inevitable that the extent of the building operations undertaken should be followed in the most favourable circumstances by a tendency to slow down. The extent of the decline has been due, of course, to the depression. It is possible that the present year will mark a new upward movement, for up to the time of the disturbances conditions generally were undoubtedly improving in the country, and while the troubles had an effect for about a month, it is notable that there was a speedy resumption of activity in the building trade—a most healthy indication of returning confidence.

Oil Deposits in Turkey.

According to a contemporary, the question of petroleum production in Turkey is now receiving the most serious attention. Adjacent as it is to important oil areas, it

would be strange if no deposits existed in Turkey, and, as pointed out in the article in question, a number of deposits are known to exist. The view apparently held in Turkey, however, that there may be a possible production of 1,000,000 tons a year, leaving 900,000 tons available for export after providing for home requirements seems to be rather fantastical. It may be stated that careful prospecting for oil in Turkey since the War has satisfied more than one investigator that the commercial exploitation of such oil areas as may exist would not at present be a remunerative undertaking. That is not to say that in the course of time Turkey may not develop an oil industry for local purposes, but it would seem clear that at this present juncture it must be sounder policy to concentrate on the improvement of her known economic resources rather than court disappointment and loss in an uncertain undertaking.

Barclays (Overseas) Results.

A very satisfactory statement is forthcoming from Barclays Bank (Dominion, Colonial and Overseas) for the year ended September 30 last. The accounts published are the third to be issued covering a normal year, and as was the case last year there is again an increase in the net profits. A year ago the net profits amounted to £494,823, and the total for the past year is £516,594, the available balance being £647,303 as against £617,301. The allocation for income tax, etc., is £130,000 as against £120,000, and the reserve fund is again to receive £150,000, while it is proposed to pay a final dividend at the rate of 5 per cent. per annum on the "A" and "B" shares, making $4\frac{1}{2}$ per cent. for the year as against 4 per cent. last year, leaving £137,981 to be carried forward as against £130,709.

COMMENTATOR.

ARTIFICIAL COTTON AND FLAX PRODUCTION.

Latest Developments.

(From a Correspondent.)

A year ago the discovery of "English Artificial Cotton" was announced, and specimens of the fibre, yarn, and fabrics were shown to experts. Material was available to selected spinners in many countries for the purposes of tests on their own machinery. Microphotographs were taken by textile chemists and others. Every possible investigation was conducted, and the reports received from the several sources bore out the earliest claims for "Artificial Cotton."

Certain constructive criticisms were appreciated. Other would-be critics who had not even seen the fibre or yarn expressed scepticism. Generally they appeared to be

irritated because the new fibre challenged the supremacy of cotton, and they ignored the clear lesson confronting Lancashire that unless fabrics can be made more cheaply the lost export trade could not be recaptured.

Since the first announcement, the research staff of the English Artificial Cotton Production and Marketing Corporation, Ltd., has been closely engaged in devising improvements and extending the botanical resources. Cotton spinners in this country and abroad have applied for the treated fibre in large quantities, many thousands of quota forms have been completed, and it is hoped in the near future to be able to distribute among the trade a proportionate amount of raw material.

The urgency of this demand caused the Corporation to renew its research in respect of the fibre of "Asclepias," or Milkweed. It was found that the special process which had proved so successful in the perfection of "Artificial Cotton" could be applied, with certain adjustments, to "Asclepias" fibre. This result has opened an immensely valuable prospect.

In addition the Corporation has arranged for the growing of "Artificial Cotton," "Artificial Flax," and other fibres on a very extensive scale in Spain, where the soil and climate promise prolific crops. A substitute for flax has recently been perfected, and a prominent group of Irish linen manufacturers who have kept in close touch with developments in this connexion announced some time ago by the English Artificial Cotton Production and Marketing Corporation, Ltd., made a practical gesture last month in inviting Mr. C. J. Hedley-Thornton to meet in Belfast representatives of the Ulster Ministry of Agriculture, the Ulster farmers, and leaders of flax spinning in the North of Ireland. At the Conference which took place at the Grand Central Hotel, Belfast, on November 4, samples of "Artificial Flax" fibre and the fabrics made from it in Belfast mills were submitted to inspection. These made a deep impression on the experts, and consideration was afterwards given to the possibility of an experimental cultivation of the fibre on North of Ireland soil.

The group responsible for the Conference entered into an arrangement with the English Artificial Cotton Production and Marketing Corporation, Ltd., under which plants will be supplied by the latter organisation and the growing supervised. Since then the raw material has been tested in Belfast by practical flax spinning concerns, and the fabrics produced have a strength and beauty which have astonished even those who were optimistic, so much so that one order alone amounted to no less than 10,000,000 lb. per annum. The Ulster flax spinning industry, which has experienced lean times, is, therefore, enabled to take a buoyant view of its prospects.

The Greek Government, after an examination of the demands of the striking students of Athens University, on December 16 accepted those which tend to the scientific advancement of the University.

THE ROUMANIAN MONOPOLIES INSTITUTE.

The Kingdom of Roumania Monopolies Institute was created at the beginning of this year at the time of the arrangement of the Stabilisation and Development Loan. The functions of the Institute are the exploitation of the monopolies, and the undertaking of all commercial and financial operations in the interests of the monetary stabilisation and economic development of the State. In order to inform the Roumanian and foreign public of the activities of the Institute, the Board of Directors is publishing a quarterly bulletin in Roumanian, French, and English. The first issue of the bulletin, which is now forthcoming, covering the period from the creation of the Institute until July 31, gives a comprehensive survey of the organisation of the undertaking in addition to details of the financial results of the exploitation of the monopolies for the first half of 1929, the execution of the loan contract, and the Budget of the Institute.

The old Regie of the Monopolies transferred to the Institute the establishments and exploitation services of the monopolies, which include six tobacco factories, three match factories, thirteen salt mines, extensive services for the cultivation and fermentation of tobacco, and its commercial organisation. As regards production, the Institute has three branches of activity. There is first the agricultural section, which deals with tobacco cultivation. In 1928 27,702 hectares were under tobacco, while in the present year the area planted amounted to 32,075 hectares. Last year's crop totalled 15,562,477 kgs., and this year's harvest is expected to be considerably in advance of these figures. It is stated that the depôts for fermentation and warehousing were found not only to be unsuitable but also inadequate, and the Institute therefore decided to finish or construct ten new establishments with modern installations for manipulation and ventilation. It was planned to complete this work in time for this year's harvest. The industrial section of the Institute includes the tobacco factories and the match factories, but the latter have been taken over since July for exploitation by companies created by the State in agreement with the Svenska Tandticksaktiebolaget. For three reasons the production of the tobacco factories is stated to be unsatisfactory. Cigarettes are made which are not suitable to present-day requirements; they are mostly made by hand, while the total production of cigarettes is insufficient. It was decided first to reorganise the Belvedere factory in Bucharest, and two foreign engineers were entrusted with the elaboration of the necessary plans. Large orders for modern machinery have been given for the various factories, including 19 cigarette making machines, 25 cigarette packing machines, and 40 machines for cutting tobacco. The third

branch is the mining section, in regard to which the criticism is forthcoming that the present state of exploitation does not give entire satisfaction, the methods of work being primitive and the organisation of the work defective. A foreign expert has been entrusted with the task of drawing up a plan for the exploitation of the salt mines, and the hope is expressed that within a short time there will be a considerable reduction in the cost of salt production rendering possible competition with foreign markets.

Commercial Organisation.

As regards what may be termed the selling organisation, tobacco is sold by the depots and the post offices, by whom the retailers are supplied. In some parts of the country the methods of supply are inadequate, and a reorganisation of the system is envisaged. One of the chief difficulties is in regard to the control of contraband, which is reported to have grown to disquieting proportions of late. The law governing contraband has recently been revised and modified to bring it into line with the existing conditions. The organisation for the sale of salt is very inadequate, and in some parts of the country it is necessary to go 50 to 60 kilometres to obtain this commodity. The Institute has introduced a new system for the sale of salt, based on the principle that everyone has the right to keep a salt depot, but the salt must be sold at official prices. To facilitate supplies the Institute has organised offices at the salt mines to deal with orders. It is confidently believed that the new system will result in a great increase in the number of places at which salt can be obtained.

For the first six months of the year the total collection by the Institute amounted to 3,264,477,737 lei. The charges of the Institute for the whole year are as follows: (1) Stabilisation Loan 1,491,000,000 lei; (2) working expenses 2,821,749,815 lei; (3) organisation and Régie of the Institute (new services) 20,000,000 lei; (4) Royalty to the State 3,756,000,000 lei; total 8,088,749,815 lei. There remains therefore to be collected during the remainder of this year 4,824,272,078 lei. In July the collections amounted to 648,000,000 lei, and as this month marks the beginning of the important period of the year as regards consumption, it is anticipated that at the worst the collections will not be more than 400,000,000 lei below the estimates of 4,534,000,000 lei for the six months. In subsequent years the benefits of the reorganisation introduced will have an important influence on the returns.

The report of the Sudan Construction and Equipment Company to October 31 states that the whole of the harbour works at Port Sudan undertaken in accordance with the contract dated December 1, 1924, between the Sudan Government Railways and the company have now been completed, and no further expenditure is contemplated. The obligations of the Sudan Government in respect of the payment of the interest on the Debenture stock and other expenses have been fulfilled.

The Empire Marketing Board's correspondent at Jaffa reported, under date December 5, that oranges then being shipped were of a better colour, and that with the resumption of shipments on December 15 the quality of the fruit should be good. Total direct shipments to the United Kingdom up to December 15 amounted to approximately 282,000 boxes, as compared with 212,000 boxes to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to December 7 totalled some 30,000, about the same as the quantity shipped to the corresponding date last season.

SPORTS AND GAMES DISPLAY AT THE B.I.F.

(From a Correspondent.)

Next year is to be a boom year for indoor games, according to trade authorities, and manufacturers are expecting many orders from buyers at the B. I. Fair. There are aeroplane games, in which troops have to be landed on the "enemy's" aerodrome, battleship games, indoor tennis, played with a captive ball, and a new table-cricket game which makes provision for the full number of fielders and enables the bowler to bowl fast or slow, with leg-breaks and off-breaks.

The process of manufacturing tennis and badminton rackets and hockey sticks for every climate will be an interesting feature of the Sports Goods Section of the Fair and the special machines which bend the steamed wood are to be exhibited. One machine planes and smoothes a hundred tennis racket sticks an hour, regardless of the degree of curve or the grain of the wood. Another device will be an electric "stimulator," which exercises the muscles and tissues of the body and also administers massage.

There will, of course, be a varied selection of golf balls, footballs—balls and other equipment, in fact, for every game under the sun—as well as rubber dog biscuits, golf frames, and rustless tennis net posts. There will be a cricket bat which has been designed by Mr. L. Constantine, the West Indies cricketer.

The sporting gunmakers will again have a display to show that no one can beat the British gunsmith when it comes to making a gun to suit individual requirements and tastes. There will be in all nearly 200 exhibitors of sports goods, toys, and games—one-fifth of the total number in the London Fair. The stands will cover 46,000 square feet and the galleries of the main hall, Olympia, are being bridged to accommodate them.

The Turkish Penal Court is reported to have sentenced a Greek woman of Turkish nationality to two years' imprisonment for insulting the Turkish flag.

Mr. R. W. Williams, B.A., who is engaged on archaeological work in Palestine, has been re-elected to a senior demyship at Oxford for two years.

It is announced that owing to a reorganisation of the Board of Chemical and Wood Industries, due to a change of control, the Rt. Hon. Viscount Elibank, Sir James Calder, Major C. F. Entwistle and M. René Paul Duchemin have resigned. Lord Bledisloe, who was chairman, recently resigned on his appointment as Governor-General of New Zealand.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 6,800 tons of asphalt required for the year 1930-1931. February 3.

Overhead Transmission Lines.—In fixing the date for completion of the adjudication due on February 27, 1930, for the high tension overhead transmission lines in Northern Delta, under the provision of Article 45 of the specification and conditions of tender, tenderers are notified that the Government, while leaving tenderers to fix the time within which they will undertake to complete the works, is desirous that the work should, if possible, be completed within two years from the date of passing the order.

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, sheets, woollen blankets, napkins, and textiles required for the year 1930-1931. January 30.

Paper, etc.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper, inks, adhesives, stationery, and materials for Photo-Copying Office, required for the year 1930-1931. February 17.

Drugs, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the year 1930-1931. February 16.

Cocunut Oil.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of cocunut-oil to the Egyptian Army during the year 1930-1931. March 6.

Clothing, Sheets, Blankets, etc.—The Egyptian Department of Public Health invites tenders for the supply of clothes, bedding, and sundry piece-goods. January 30. (D.O.T.)

TURKEY.

C.I. Pipes, Bends, and Valves.—Tenders are invited by the Administration Générale des Chemins de fer et des Ports d'Etat for vertical cast-iron pipes, bends, and valves required for the installation of a water supply at Karafikili Station on the Angora-Caesarea Railway. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, January 3); s.s. Britannia for Bombay (Glasgow, December 30; Manchester, January 4; Birkenhead, January 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Glasgow, December 28; Birkenhead, January 9).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 8).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, December 30); s.s. Warfield for Bombay (London, January 4).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, January 16; Liverpool and Swansea, January 18); s.s. Bantia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 25).

P. and O. Line.—S.s. Novara for Calcutta (London, January 3); s.s. Morea for Bombay (London, January 3).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, January 4); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 8).

Ellerman and Papayanni Lines.—S.s. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 28); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 28; Swansea*, December 28); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 28; Swansea, January 2); s.s. Mardinian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 11; Swansea*, January 11). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers, Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 20.

In accordance with anticipations the new account saw no increase in the volume of business passing on the Stock Exchange. In the absence of demand, values tended lower, and under the influence of the Inveresk revelations, and the passing of the Elder Dempster dividends, the tone was definitely gloomy towards the close. With regard to these and other groups it is to be hoped that the investigations proceeding will be completed as soon as possible, for in present circumstances the sooner the worst is known the better.

Gilt-edged were dull in spite of the inflow of gold, prices tending to sag. Home Rails failed to attract much interest, but their tone is rather firmer, with the approach of the dividends, to whose prospects we refer below. The unsatisfactory developments referred to above further checked animation in industrials, which obtained little assistance from New York. No increase in dealings can be looked for until the present account is over, and many members have already left the City, with the intention of not returning until after the usual January 1 holiday.

Railway Dividend Prospects.

Although the traffic receipts have not been so encouraging recently, the totals announced this week—for the first fifty weeks of 1929—show considerable increases over those of 1928 in the case of two out of the four companies. The aggregate for the Great Western is £29,694,000, compared with £29,104,000 a year ago, and that for the L.N.E.R. £52,810,000, compared with £51,496,000. On the other hand, the receipts of the largest concern of all, the L.M.S.R., continue depressing, the aggregate of £69,805,000 being £585,000 less than for the corresponding period last year. Those of the Southern also seem unlikely to reach the 1928 total, there being at present a deficiency of £106,000 at £21,687,000. The half-yearly reports revealed substantial savings in expenses in the

case of all four concerns. These have probably been added to in the latter part of the year, except in so far as they resulted from the 2½ per cent. wage cut of 1928. In view of the higher interim distributions the market is inclined to look for a total dividend of 7 per cent. in the case of the Great Western, against 5 per cent. last time, on which basis the yield would be about £7 9s. per cent., and 4½ per cent. on L.M.S.R. ordinary, compared with 3½ per cent. If this hope is borne out, L.M.S.R. ordinary will return nearly £8 10s. per cent.

And Now Inveresk.

About a couple of months ago many investors realised that the once highly-prized newspaper shares had rather quickly reached a low level. This was in part accounted for by the difficulties of the newspaper industry, which was faced with higher costs for its raw material—paper. What was more serious, it was in many cases engaged in financing a newspaper "war" in the provinces. Despite reassuring statements, and Lord Rothermere's famous advertisement, values continued to fall. The first substantiation of the many adverse rumours came when Mr. Horne, interested in the strange mixture of cement and newspapers, filed a petition in bankruptcy. Hot upon that comes the announcement that the Inveresk Paper Company cannot pay its dividends, and that Mr. Harrison has resigned his chairmanship of this and the subsidiary companies. It is understood that there have been extensive bank loans which seem to be out of harmony with an assurance to first preference shareholders that no such borrowings would be made. Several important investment trusts, holders of preference shares, have appointed a defence committee, under the chairmanship of Lord St. Davids. The Inveresk group may be in difficulties now, but it comprises a number of valuable concerns, including United Newspapers (controlling the *Daily Chronicle*), Provincial Newspapers, and Illustrated Newspapers, besides the numerous paper mills making up the parent company. When the present difficulty has cleared, a recovery may be hoped for.

The Rand Half-yearly Dividends.

On the present occasion very little interest has been manifested in the declaration of the Witwatersrand gold mining companies for the six months ending December 31. Two surprises can be recorded—one on the agreeable, the other on the adverse side. For some time past, from several causes, the profits on the Sub Nigel have been on the down grade; moreover, the company is faced with expenditure in connexion with the extension of its treatment plant. Consequently a cut in the rate had been generally expected. Actually the company repeats its June announcement of 20 per cent., which compared with 30 per cent. twice previously. The inference is that the outlay above referred to is being, at any rate temporarily, financed. So far from decreasing, recent monthly profits on the New State Areas have shown expansion. Hence the declaration of 5 per cent. against 7½ per cent. for the first half of 1929 aroused some disappointment, although the total for the two years is the same—12½ per cent. Differences in the rates for the two years are usually of small extent, save in the case of the Crown Mines, whose 1929 total will be 65 per cent., or 10 per cent. more than for 1928. This company's 10s. shares are quoted on the London Stock Exchange at about 63s.

M. Karakhan, the Soviet Commissar for Foreign Affairs, left Ankara on December 17 after renewing the Turkish-Soviet Treaty of Neutrality and Friendship signed in Paris in 1925. Mustapha Kemal Pasha accorded M. Karakhan a long audience, and various entertainments were given in the visitor's honour.

On the occasion of the birthday of King Alexander of Yugoslavia, M. Liapcheff, Bulgarian Prime Minister, called at the Yugoslav Legation for the first time since he took office, and conveyed to M. Neshitch, Yugoslav Minister in Bulgaria, his wishes and those of the Bulgarian Government for the prosperity of Yugoslavia and the happiness of her King. King Boris sent his wishes to M. Neshitch through his Aide-de-camp.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated November 30.]

General Situation.

There is hardly any change for the better to be recorded with regard to the general trade position in November, with the sole exception, perhaps, of a slight improvement in foreign trade. For the first time since January last, there is a small monthly balance.

Business continues to be exceedingly slack, new credits are almost unobtainable and existing engagements are being cut down in a drastic manner. There are good reasons to believe that this credit policy will certainly speed up the process of clearing the market from unsound commercial and credit undertakings. However, the position cannot possibly be liquidated without a temporary crisis in the solvency of almost every kind of trade and without substantial losses to the parties interested.

The existence of important quantities of good quality tobacco and maize ready for export is generally regarded as promising an improvement in the present state of things, especially so far as present consumption is concerned. Undue optimism appears, however, to be out of place, as the general trend of prices for these commodities remains rather unfavourable. The Bulgarian peasant can hardly be induced to part with his produce at the prices now prevailing, unless credit pressure compels him to sell some of his reserves.

The failure to reach a settlement of the Reparations issue is aggravating further the general uneasiness pervading almost the whole economic and business life of the country. It may be true that this is a factor of psychological rather than material importance at this stage, but the crisis now prevailing is in more than one respect a complex of psychological causes set up by the unusually weak prices of agricultural produce, which have put a considerable strain on the already overstocked and heavily indebted position of almost the whole market.

Agriculture.

The following table gives the area planted with industrial plants and production during the year 1928 as compared with 1929:—

CEREALS.	1928.		1929.	
	Area planted Hectares.	Produc- tion Quintals.	Area planted Hectares.	Produc- tion Quintals.

The Chemical Industry in Bulgaria.

According to results obtained by the National Bank of

Bulgaria for 27 large chemical undertakings which were the object of examination in 1927, the capital invested on December 31, 1927, amounted to 5,028,546 gold leva, and was distributed as follows:—real estate, 246,351 gold leva (4.90 per cent.); buildings, 1,960,165 gold leva (38.98 per cent.); and machinery, 2,822,026 gold leva (56.12 per cent.). The capital invested in 30 large chemical undertakings on December 31, 1926, amounted to 4,927,526 gold leva.

The power-producing plants of the large chemical undertakings in 1927 numbered 35 with an effective h.p. of 769, of which 22 were steam boilers, locomobiles and turbines with an effective h.p. of 636; 1 Diesel engine with an effective h.p. of 18; 4 internal combustion engines with an effective h.p. of 50; and 8 benzine engines with an effective h.p. of 65. The electrical motors employed numbered 48 with an effective h.p. of 272.

The raw materials used in these 27 undertakings on December 31, 1927, were valued at 5,324,231 gold leva, of which 2,530,148 gold leva (47.52 per cent.) were paid for materials of local origin, and 2,794,083 gold leva (52.48 per cent.) for imported materials. The auxiliary materials used are valued at 972,672 gold leva, of which 535,073 gold leva (55.01 per cent.) were used for the supply of materials of local origin, and 437,599 gold leva (44.99 per cent.) for imported materials. The fuel used is estimated at 194,337 gold leva, of which 177,722 gold leva worth (91.45 per cent.) were of local origin, and fuel worth 16,615 gold leva (8.55 per cent.) were imported. The total value of the materials used by the chemical industry during the year under review aggregated 6,491,250 gold leva, of which 3,242,943 gold leva (49.96 per cent.) were for the supply of materials of local origin, and 3,248,297 gold leva (50.04 per cent.) for imported materials.

Miscellaneous.

Receipts of the State Treasury for October show a considerable increase as compared with the figures for September, due mainly to increased receipts from direct taxes, to payment of municipal contributions towards teachers' emoluments, and to sundry receipts. In October the ordinary receipts amounted to 642,433,799 leva, and in September to 497,003,426 leva, while in August they were 549,730,774 leva.

The trade balance during October, due to increased exports, has shown for the first time this year a surplus of 21,098,530 leva, while during September it was down by 219,954,431 leva, and in August by 310,864,985 leva. Imports during October totalled 48,116 tons for 648,571,833 leva, and exports amounted to 42,912 tons for 669,670,353 leva, while in September imports amounted to 50,204 tons for 685,116,399 leva, and exports totalled 29,001 tons for 465,161,968 leva.

The quantity of notes in circulation from October 23 to November 15 again show a steady level. On October 23 the notes in circulation amounted to 4,370,533,000 leva, on October 31 to 4,254,602,000 leva, on November 7 to 4,205,058,000 leva, and on November 15 to 4,072,661,000 leva.

The foreign exchange reserves of the National Bank show almost a steady level during the period under review. Thus, on October 31 foreign exchange amounted to 1,279,579,000 leva, on October 31 to 1,307,949,000 leva, on November 7 to 1,282,487,000 leva, and on November 15 to 1,211,703,000 leva.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry, and Labour, the number of employees in industrial undertakings during November was 76,096, against 85,731 in October and 69,090 in November, 1928.

The wholesale commodity index number (on the basis of 1914 = 100) for October, was 3,174, as compared with 3,111 for September and 3,141 for August and 3,129 for October, 1928. The general level of wholesale prices has thus increased by 2 per cent. as against September, 1929, while an increase of 1.4 per cent. is shown as compared with October, 1928.

JOHNSTON LINE

THE GRAPE AND WINE INDUSTRY OF CYPRUS.

[A recent *Agricultural Supplement to the "Cyprus Gazette"* contains an interesting review of the grape and wine industry of the Island by Mr. M. T. Dawe, the Director of Agriculture, from which we take the following extracts.]

Last winter, with its heavy fall of snow and rain, provided the soil with abundant moisture, and the vines, with a more or less sudden rise of temperature in the spring, started into vigorous growth. The florescence, although equal to that of a normal year, was less satisfactory than in 1928, which was a very exceptional year. The fruit, however, owing mainly to the exuberance of the vegetative growth, did not set or form altogether satisfactorily in many localities; but the moisture content of the soil being high, the berries which formed grew to a larger size than they would have ordinarily done, and so the loss in crop from a poor florescence was, to some extent, minimised. Subsequent drought and intense heat caused sunburn in the grapes which was responsible for some damage to the crop.

The weather during the vintage was favourable, except for the last few days of the season in the localities of higher altitude, where the grapes ripen late. The heavy rains which fell towards the end of the season militated against the gathering of the grapes and had a bad effect on their quality. The maturation of the grapes has been generally good, the sweetness varying between 14 degrees to 17 degrees Baumé. The fermentation was normal and satisfactory and a good quality of wine is anticipated, rich in colour and of good body. It is expected that there will be a fair quantity of slightly sweet wines. The increased use of metabisulphate will undoubtedly have a good effect upon the quality and preservation of the wines. It is estimated that the output of wine this season will be from 75,000 to 78,000 loads.

In October last year the Department of Agriculture issued a special Bulletin on the Grape and Wine Industry of Cyprus, in which were given such figures as were then available in regard to the area under vineyards and the production of vine products. Since then a viticultural survey of the Island has been completed, and it is hoped it will be possible to publish, at an early date, more complete data than were available when the Bulletin referred to was compiled. The area at present under cultivation is estimated to be about 320,000 donums, or, say roughly, 105,785 acres. The production of vine products for the whole Island is estimated approximately as follows:—Grapes, 38,000,000 okes; raisins, 3,500,000 okes; wine, 4,100,000 gallons; spirit, 500,000 gallons; vinegar, 1,000,000 gallons.

The cultivation of the vine has not received in the past the careful attention which should be given to it in this Island, and the Department of Agriculture is constantly urging the better cultivation of the vines, and manuring, of the vineyards, in order that the villager may produce larger and better crops. The Department has recently started an Experimental Vineyard at Saitta, which it is hoped will prove a valuable centre of research in connexion with this important industry, as well as a model vineyard of great value as a demonstration to the villagers of the most up-to-date methods of cultivation and vineyard management. With the judicious choice of varieties, good cultivation, and the proper management of vineyards, the villager should be able to increase very considerably the average production of grapes, as well as improve the quality of the fruit, raisins, and wine produced therefrom.

Trade in Vine Products.

The actual exports of grapes and other vine products for the last year will probably convey the most accurate idea of the export value of the trade this industry represents in the Island at the present time. They are as follows:—

	Quantities.	Value.
	cwt.	£
Grapes	42,118	14,225
Raisins	47,377	79,351
Wines:		
Commandaria	6,198 gallons	808
Ordinary	1,259,793 gallons	52,237
Spirit	12,063 gallons	2,439
Vinegar	206,157 gallons	5,198

Total value of exports £154,258

The consumption of vine products in the Island, it is estimated, are, taken on the whole and on a very conservative basis, considerably more than double that of the exports, so that it may be estimated that the total annual production of grapes and its derivatives are worth to the Colony a sum exceeding half a million pounds sterling.

The exports of grapes have risen from 5,636 cwt. in 1900 to 42,118 cwt. in 1928, and the respective values from £723 in 1900 to £14,225 in 1928. The trade is almost exclusively with Egypt, and there is little doubt that there is still considerable room for its expansion if better care was taken in the selection, grading, and packing of the fruit for the market. If selected grapes were put up in attractive containers increased sales would doubtless take place in the Egyptian ports.

Last year's export of raisins was a record one in quantity, though it showed a reduction in value as compared with the previous year. The principal purchaser was Italy, taking 46,475 cwt.; France took 33,679 cwt., and Roumania 9,752 cwt. The United Kingdom only took 3,309 cwt., less than a third of the quantity taken in 1927. The Cyprus raisin is in demand mainly for manufacturing rather than for confectionery purposes. It is hoped, how-

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of *Asar* of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and super-vises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

ever, by the cultivation of suitable seedless varieties, and by improved methods of preparation, that this Island will be able to place on the market varieties suitable for the confectionery trade. There have been difficulties amongst the growers in disposing of their raisins last season at satisfactory prices, and inquiries have been made with a view to ascertain whether increasing quantities could not be marketed in the United Kingdom. One merchant reported that buyers will not contract ahead or take any responsibility in regard to booking contracts for shipment, as they are able to buy all they require for spot delivery. This merchant was, therefore, of opinion that if Cyprus suppliers would ship their raisins to London, consigning them through the regular channels, so that they can be offered for spot delivery, an increasing trade would ensue. Although the local raisins have the disadvantage of containing seed, they possess a nice sweet and soft flesh and are delicious in taste and improved methods of preparation should result in being able to market at better prices. There are already in cultivation a large number of sultana vines, but their production has not yet assumed commercial quantities.

There are two main types of wine produced in the Island, that known as Commandaria, and ordinary table wines of various kinds. The former is prepared from half-dried grapes and the latter from fresh grapes. The exports of Commandaria have been decreasing from 1924 until 1928, when an increase was shown. In 1900 the quantity of Commandaria exported amounted to 57,126 gallons, valued at £2,735; last year the quantity exported amounted to only 6,798 gallons, valued at £808. The quantity of ordinary wines exported in 1900 amounted to 1,471,043 gallons, valued at £27,143; in 1928 the quantity exported was 1,259,793 gallons, valued at £52,237. These figures indicate that Commandaria exports have declined considerably and that although the quantity of ordinary wines exported has not increased, the value has more than doubled, indicating that considerable improvement has taken place in the market price of wine and in the quality produced. The principal purchasers last year for Commandaria were Egypt, the United Kingdom, and Dodekanese. Our principal customer for ordinary wine is Egypt, who took last year 810,295 gallons, as compared with 1,230,130 gallons the previous year; France took 353,262 gallons, and Syria came next and took 21,577 gallons, and the United Kingdom 21,509 gallons only.

Wine-making.

The production of wine is the most important phase of the grape-growing industry, as it is mainly on the quality of the wine produced that the future of this industry lies. Notwithstanding the fact that the first winery was established in Cyprus at Perapedhi in 1891, the production of wine suitable for export to the British market has only engaged the serious attention of wine merchants during the last few years. Prior to 1891, wine was produced locally solely by domestic and primitive methods, as indeed it still continues to be, though on a smaller scale, throughout the wine-growing areas to-day. In 1926 the Cyprus Wine and Spirit Company erected their modern winery at Perapedhi on the ruins of previous efforts, and last year another at Mallia, and this year a further one at Limassol. More wineries of this nature are needed in other parts of the grape-growing areas, so that the growers can bring their grapes to be made into wine under more hygienic and scientific methods.

It is obvious that the old and primitive method of making wine must, sooner or later give way to the modern winery, for the primitive methods of pressing, the crude nature of the receptacles employed (large earthenware pots), the methods of handling, and the unsatisfactory nature of the storage accommodation and domestic associations of same, are not conducive to the production of clean, sound, and wholesome wine. Moreover, the small scale on which each grower makes his wine renders it difficult to obtain supplies of uniform quality and character in any large quantities, and mixing has, therefore, to be resorted to by the purchaser or exporter.

The marketing of any product is a question which should be taken hand in hand with production, and this is especially so with a commodity so difficult to market successfully as wine. Excepting the wineries and co-operative wine societies, the marketing of wine under present-day conditions is no concern of the producer; he leaves that part of the business to the wine merchant, and the quality of the wine marketed, apart from the defects of manufacture as set forth in the paragraph on wine-making, is largely what the merchant makes it. Excepting the production of the wineries and certain co-operative wine societies, the common wine of Cyprus must be regarded as a low-grade wine, and, therefore, has restricted markets where the competition of other wine-producing countries is being increasingly felt. In the competing countries wine is produced by big wineries on a large scale and offered at a lower price than Cyprus wine produced by the small grower. It is, therefore, becoming increasingly difficult to market Cyprus wines in the Egyptian market, owing to the keen competition of other countries and particularly Greece and Italy, as is shown by the big drop in the exports to Egypt of 1928 already referred to.

It is, therefore, essential for Cyprus to turn its attention to other markets, and in order to do so it must give serious attention to the improvement of the quality of its wine and to study and cater for the requirements of those markets. This is beyond the local domestic producer and it has so far proved beyond the capacity of the ordinary non-producing wine exporter; for has not the United Kingdom market been for ages open to receive Cyprus wines, and has any serious effort ever been made by our merchants to capture that market? The answer is in the negative, and it was, therefore, that the Government stepped in last year and brought into force, on May 4, the Law which has for its object the capture of the British market for Cyprus wines. The first duty of the Government in connexion with this measure was to prevent, by every means within its power, the chance export of inferior or unsound wine to that market which might smirch the name of Cyprus as a wine supplier and render the chances of subsequently marketing in that country good and sound wines exceedingly difficult, if not impossible. It is essential, therefore, that the wines exported are of a quality with which a regular and permanent trade can be built up, and from investigations already made it would appear that the type for which there are the best prospects is the Port type.

For eighteen months, during which the Law has been in operation, the Government has carefully examined all wines intended for export to the United Kingdom market and has excluded all those which, in the opinion of the Statutory Wine Committee, do not come up to the standards required for sale and competition in the United Kingdom market. The Government has been blamed for creating a monopoly, since the only licence so far issued under the law has been to the British Cyprus Company. It is an essential part of the Government scheme that Cyprus wines should be marketed in the United Kingdom only through responsible channels, in order to secure for them the interest and sympathy of the wholesale distributors throughout the Kingdom and to protect quality and price at which sold. It is further an essential factor that the wines imported from Cyprus should, as soon as the quality justifies, reach the consumer as the Wines of Cyprus. Were the indiscriminate export of wine to the United Kingdom, and its unrestricted sale there permitted, it is obvious it would be quite impossible to build up a good name for Cyprus wines, or a demand for wine of good quality, such as would create a market that would lay the foundation-stone of the future prosperity and further development of the local wine industry. It is regretted that individual interests must be sacrificed, but the duty of the Government is to consider the general interests of the industry, and to prevent by all means in its power the marketing in Great Britain of any wine from this country which might prejudice the future prospects of our wine trade in that important market.

Important New Power Station in England.

The latest scientific principles of steam generation and power station practice are represented by the first section of 60,000 K.W. of the new Hams Hall Power Station, Birmingham, officially opened on November 6 last, the foundations, buildings and other arrangements allowing also of the addition of a further 30,000 k.w. In July, 1927, the complete contract for the whole of the station, foundations, buildings, and plant, was given to Messrs. International Combustion, Ltd., of London, the price being £1,336,400 for the 60,000 k.w. section, the estimated cost of the final station being £3,500,000.

The present main buildings are the boiler house, 374 ft. long by 85 ft. wide by 8 ft. high, the turbine house 309 ft. long by 62 ft. wide by 67 ft. high, the switch house 327 ft. long by 268 ft. wide by 58 ft. high, and the control room and offices 327 ft. long by 28 ft. wide by 42 ft. high, while extensive coal storage space is provided.

As regards the main generating plant this consists of two 30,000 k.w. turbo-generators, supplied by the General Electric Co., Ltd. (Fraser-Chalmers, Ltd., Branch, Erith), while the surface condensing and de-aerating plant is made by Hicks-Hargreaves and Co., Ltd., all the various firms mentioned being sub-contractors to International Combustion, Ltd.

The boiler plant comprises five Babcock and Wilcox boilers of the sectional header type with superheaters, each of 190,000 lb. evaporation per hour normal duty, and 228,000 lb. overload operating at 375 lb. pressure and 710 degrees F. steam temperature. These boilers are equipped with the latest design of "Lupulco" pulverised fuel combustion chambers including "Murray" fin tube water-cooled steel walls and water screen, along with 5 of the new "R" type "Lopulco" turbulent burners having the combustion completed in a flame of only 10 feet in length, fitted in front of the setting, operating horizontally.

Also each boiler is equipped with "Usco" multiple plate air heaters, and the pulverised fuel is one of the "direct" system, using "Atritor" pulverisers supplied by Messrs. Alfred Herbert Ltd., of Coventry. One pulveriser is to operate each burner, grinding four tons of low grade coal per hour with 25 per cent. moisture and 20 per cent. ash, that is five pulverisers per boiler, or 20 tons of coal total per hour for the boilers and 100 tons per hour for the complete plant. Further, water sluice ash conveyors are supplied by the Underfeed Stoker Co., Ltd., fans by Messrs. Davidson and Co., Ltd., and coal handling plant by the Mitchell Conveyor and Transporter Co., Ltd. The installation also includes two enormous reinforced concrete cooling towers 215 ft. high and 175 diameter at the base, circular in plan view, each capable of reducing 4,000,000 gallons of water per hour from 93 degrees F. to 76 degrees F. operating in conjunction with a cooling water reservoir of 5,850,000 gallons being one month's capacity.

The overall thermal efficiency from the raw coal to the switchboard is calculated as 23 per cent., while presumably the steam generation efficiency can be taken as from 87.5 per cent. to 90 per cent. on continuous running. Further, it may be stated that the erection of the present plant of 60,000 k.w. constitutes a record in Great Britain for rapidity of construction, and there have been used alto-

gether 2,000,000 bricks, 2,450 tons of steelwork, 8,000 cubic yards of concrete, and 53,000 square feet of glazing, while the total excavation is 165,000 cubic yards including roads and a railway siding.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended December 14:—

Grain.—The position has gone from bad to worse and the heavy slump in grain prices abroad has brought about a complete stagnation in business. The reports that have got about lately in regard to the unsatisfactory condition in which part of the maize shipments from the Danube have arrived at discharging ports had the effect of rendering shippers still more disinclined to deal in this commodity, in spite of the very low price at which same was obtainable. In the circumstances, shippers, who originally intended despatching their stocks to Sulina for wintering purposes, are hastening to do so for fear that the present unsatisfactory state of affairs might last throughout the winter. Chartering has, in consequence of the above situation, been extremely limited, and steamers have thereby suffered no little delay. Rates were nominal at about 16s. to 16s. 6d. For English ports a few parcels, representing old sales, were booked at rates varying between 17s. 6d. and 19s. There was no change in the situation at Constantza, from which port a few shipments took place for the Continent at about 9s. 6d. and 10s. Steamers, however, have had to wait for turn for a berth at the silos.

Timber.—No fresh engagements have been closed this week, as activity in the Danube is gradually falling off owing to the saw mills diverting their transports to Constantza in view of the uncertainty of navigation prospects in the river. On the other hand, as the weather actually remains fine and mild, Mediterranean-owned vessels do not hesitate to come up the river to compete for the little business offering, and the result is a lowering of freight rates for such parcels as are still in the market.

Weather and Crops.—The weather continued to be overcast, mild and somewhat misty till Thursday when the sky cleared. During the night, however, fog set in which became thick here on Friday morning impeding navigation till mid-day, after which it cleared again considerably though it has since been rather misty at times. There has been a little light rain in different parts, some snow in the highlands, and plenty of dew in the rest of the country. Though the total amount of precipitations has been small, the damp atmosphere and the absence of drying winds have enabled the ground to maintain its moisture, and conditions for the development of the autumn sowings remain excellent. The temperature which was relatively high at the beginning of this week, fell subsequently, but though there has been frost in the Northern districts there has been no sign of it at the ports, and it looks as if the Danube navigation will be safe for some time yet. Official statistics have now been published showing the following areas sown this autumn up to December 1, compared with sowings last season:—

	1929.	1928.
	Hectares.	Hectares.
Wheat	2,409,300	2,781,700
Rye	304,300	272,800
Barley	115,800	110,800
Rapeseed	17,000	16,700
	2,846,400	3,191,000

Sulina.—Notwithstanding bad weather which has prevented dredging and soundings, the Bar depth remains at 24 feet. River.—Maximum depth 24 feet.

Constantza. This week about 10,500 tons of grain arrived from the interior, and about 11,700 tons were shipped to Weser and Antwerp. Eleven vessels loaded about 54,600 tons petroleum products, and five took fuel oil for bunkers.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 18:—

Egyptian Futures.

Sakel Contract.—Events throughout the past week indicate that this market is working down to a more interesting position, and, rather contrary to general anticipations, quite a revival in speculative business has taken place, especially during the more recent sessions. A brief survey of events lends belief to the opinion that the bulk of the old long account has now been liquidated, as considerable stop-loss and forced selling were particularly noticeable during the earlier days of the week. This cotton has been absorbed in part by short covering and by fresh speculative buying on the theory that, local values standing as they do, at a heavy discount below the Egyptian Government's buying basis, risks of further declines for some time are minimised, and that some factors may develop in the meantime to turn the position to their advantage. This reasoning appears logical, especially so should the Government, as appears probable, be called upon to accept an important weight of cotton during January. In this case, to protect their own interests, they would probably exercise their influence to restrict the acreage of next season's crop, and whatever stock they might be forced to carry would cease to operate as a market factor at ruling levels. Reading a report from a prominent shipping house in Alexandria, we notice available supplies are estimated at about 2,35,000 kantars, whilst exports from December, 1928, to the end of August, 1929, were about 14 million kantars, with the world's trading conditions more satisfactory than at present. Basing ourselves on the above figures and also taking into account a prospective large Sudan crop, abundant supplies of fine cotton are assured for some time; but it must be borne in mind that current values are about 5½d. per lb. below the level obtaining at this time last year, and it has yet to be determined to what extent this discounts the statistical position.

Upper Contract.—We have experienced a series of quiet markets in this contract during the past week, and values have been mainly influenced by the downward tendency in the American departments. With December Alexandria held at 19 dollars, local prices have narrowed well below a shipping parity, and on this account locally-hedged cotton is offering at a cheap basis and should later attract the bulk of the demand. Trade reports indicate the usual seasonal dullness, but with the Upper varieties comparing favourably in price with outside staples we anticipate a much improved offtake after the turn of the year.

Egyptian Spot.

We have experienced another quiet week in this department. The constant sagging of futures (except to-day when a slight recovery took place) has offered no encouragement to spinners, and reports from up-country have shown no indication of trade improvement—rather the reverse, in fact. Unless the unexpected happens, we cannot see any change in the present conditions likely before the end of the year, or early in January.

Sakels have been in moderate request at from 25 off to 50 on January contracts, and some inquiry has cropped up here and there for low cotton at about 9d. The better grades have been neglected.

Uppers have been in fair request at from 25 off to 25 on, with interest shown also in better cotton at from 50 to 70 on. The lower grades have been rather neglected this week.

Pilion.—The demand for this cotton has been quieter, and interest has been shown chiefly in cotton at from 50 to 100 on January Upper. Maarad, Nahda, White, etc.—These growths have all suffered from neglect.

Sudan Sakel.—A certain amount of inquiry has been present, but sales have been disappointing.

Tokar Sakel.—There has been very little business reported in this growth.

C.i.f. business.—The offtake has been of a very patchy description. Alexandria quotations are not attractive at present, and, of course, if the Liverpool market continues to drop, they will become less so.

Forwardings.—Last week these were returned at 7,050 bales Egyptian and 2,019 bales Sudan.

Spot Sales.—These have been estimated at 1,100 bales Egyptian and 60 bales Sudan Sakel. Quotations of Sakel show a reduction of 25 points (Extra Fine exceptionally 70 points). Uppers are 22, and Pilion 25 points lower. F.G.F. Sakel to-day, 14.10d. F.G.F. Upper to-day, 10.28d. F.G.F. Pilion to-day, 11.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 20, state:—Since our last report the futures market has remained inactive and the tone has been rather heavy. The week's summary of price movements is as follows:—Sakellaris: January, 27.27 dollars, 0.40 dollars down; March, 27.82 dollars, 0.28 dollars down; May, 28.22 dollars, 0.22 dollars down; July, 28.66 dollars, 0.24 dollars down; November N.C., 29.21 dollars, 0.25 dollars down. Ashmouni: December, 19.04 dollars, 0.10 dollars down; February, 19.31 dollars, 0.23 dollars down; April, 19.70 dollars,

0.27 dollars down; June, 20.02 dollars, 0.28 dollars down; August, 20.32 dollars, 0.28 dollars down; October N.C., 20.44 dollars, 0.41 dollars down.

Sakel.—Conditions ruling in the Sakel market have continued very much on the same lines as described in our report of last Thursday; a state of more or less complete stagnation has prevailed and fluctuations from session to session have been limited to a few points. A few fixings of cotton bought up-country earlier in the season were put through, and these sufficed to cause a further decline of a few points, bringing January down to 27½ dollars, as against the limit of 27 dollars fixed by the Government, at which it will become a buyer. There has been no sign of change in the attitude of the trade, and their continued abstention is only natural in view of the continued demand from shippers. On the 9th inst. the American Bureau published its report, the last to appear before its final estimate, the figure announced being 14,919,000 bales, against 15,009,000 bales a month ago and last year's final production of 14,478,000 bales; the estimate was slightly higher than that anticipated by our market. Reports from consuming centres are far from optimistic, and general conditions, both industrial and financial, are not such as to afford much hope for improvement in the more or less immediate future. We therefore expect that the market will continue to remain at round about the level of the prices fixed by the Government. The Sakel/Uppers straddle (January/February) this week stands at 796 points, against 813 points last week and 1,505 points at this time last year.

Uppers.—This market is in much the same condition of inactivity as that prevailing for Sakellaris. Against the second December tender, dockets for 11,500 kantars were issued; up to the moment of writing, the cotton tendered has not been definitely placed, but there is no doubt that it will eventually find its way into the hands of the Government. The demand from the trade has been only moderate, the Continent being the principal buyer. As in the case of Sakel, the only prospect visible for the moment is for values to settle down to about the levels fixed by the Government. Against the second December tender, dockets for 11,500 kantars were issued, bringing the total so far this month up to 69,750 kantars. The Ashmouni/

American straddle (February/January) this week stands at 218 points, against 214 points last week and 326 points at this time last year.

The week's receipts amount to 327,169 kantars, against exports 263,135 kantars; the stock in Alexandria stands at 3,174,984 kantars.

Spot.—There has been little or no change on which to comment. We have had a week of moderate markets, and the totals are about the same as last week. We estimate the turnover at about 17,000 bales, of which 4,500 bales Sakellaridis, 11,500 bales Ashmouni and Zagora, 350 bales Pilon, and 650 bales other varieties.

Sakellaridis.—The poor demand for Sakel still continues, and the only inquiry is for medium grade cotton.

Ashmouni and Zagora.—There still continues to be a very good demand for any cotton grading above Fully Good Fair, and fairly good premiums have been paid.

Pilon.—Here the demand has fallen off somewhat, and premiums have eased a little.

Other Varieties.—With the exception of White, there has been a very poor market and some quite cheap cotton has been on offer.

Up-country.—There has been a recurrence of the inclement weather which has, to a certain extent, hindered work in the interior; moreover, other ruling conditions are not conducive to active business. Buyers are scarce, and holders, with the minimum prices fixed by the Government practically reached, are naturally not showing any eagerness to dispose of their cotton.

It is reported that M. Charles Rist, the technical adviser of the National Bank of Roumania, will retire at the end of February to take up similar duties elsewhere, and that he will be succeeded by M. Auboin, who was his chief assistant.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal Company from December 7 to 13 amounted to 22,310,000 francs.

The South Indian Railway have given a contract for copper rods and tubes to Allen Everitt and Sons, Smethwick.

The Egyptian State Railways has placed an order for steelwork for bridges with Shelton and Co., Birmingham.

The annual general meeting of the Credit Foncier Egyptien will be held at the company's offices in Cairo on January 15.

The Directors of the Sudan Plantations Syndicate announce that the payment of the dividend of 15 per cent. declared on November 16 will be made on January 16 to holders registered on December 31.

The India Stores Department, London, has given a contract to Callenders Cable and Construction Company, Ltd., for the supply, delivery, and erection of high-tension overhead transmission lines in connexion with the Uhl River hydro-electric scheme of the Punjab Government.

The Bengal-Nagpur Railway has given a contract to the Cleveland Bridge and Engineering Company for seven 300 ft. steel spans. The railway has also placed an order for eighteen 60 ft. steel spans for the strengthening programme of their Katni branch with the Patent Shaft and Axletree Company, Wednesbury.
